POLARIS · HOW-TO GUIDE · SETTINGS

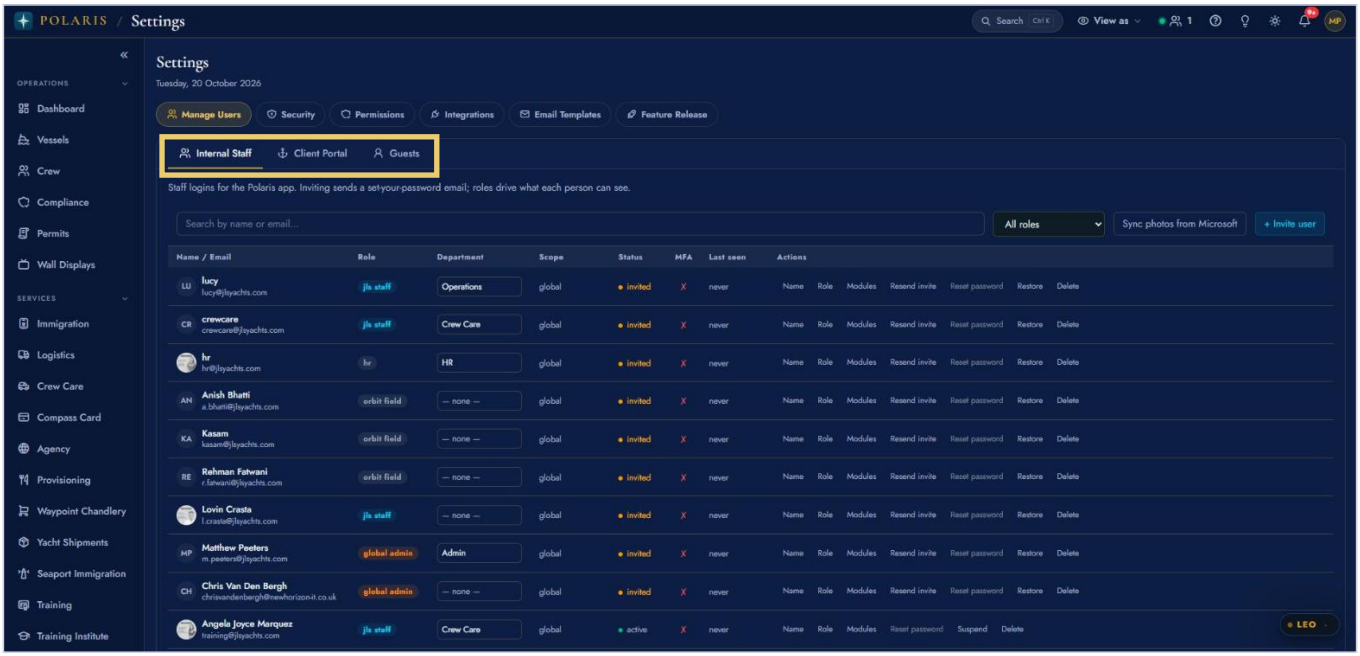

Invite a staff member and set their access

4 steps · about 3 min

Give a colleague a Polaris login and choose which modules they can see.

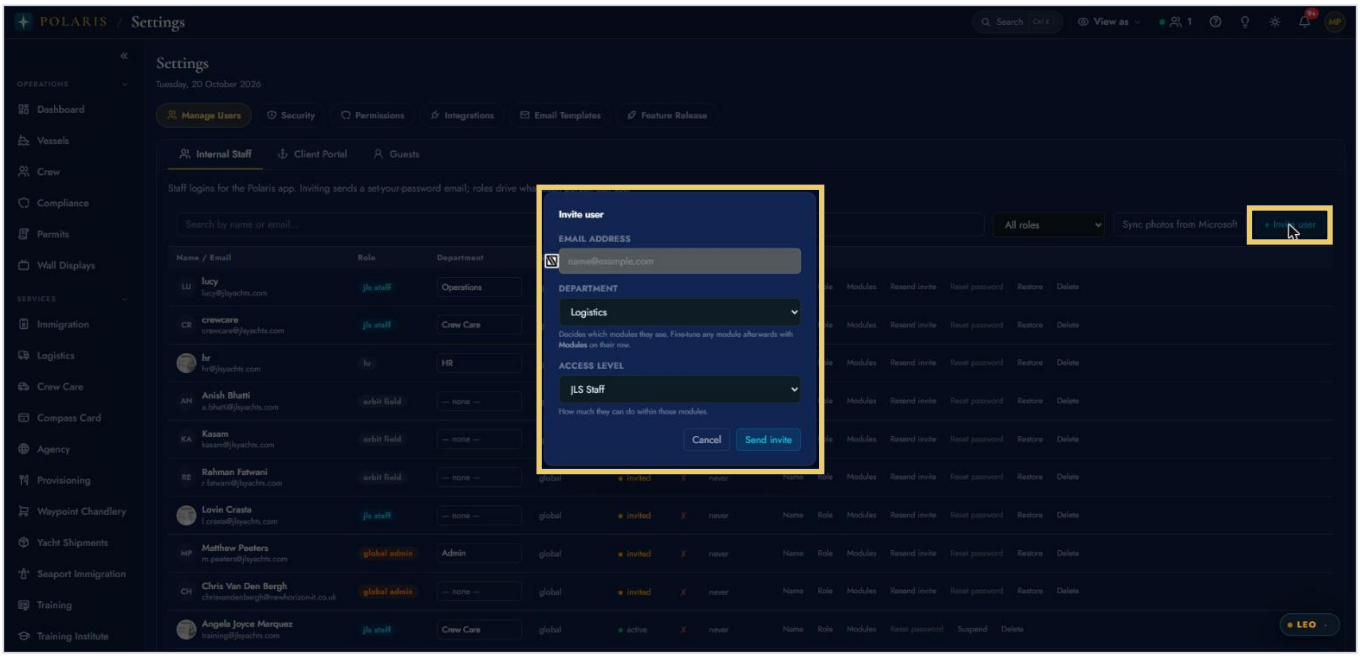

1 Open Manage Users

Click **Settings** -> **Manage Users**. **Internal Staff** lists every staff login with their role, department, status, 2FA and last seen. **Client Portal** and **Guests** hold captains' and outside guests' logins.

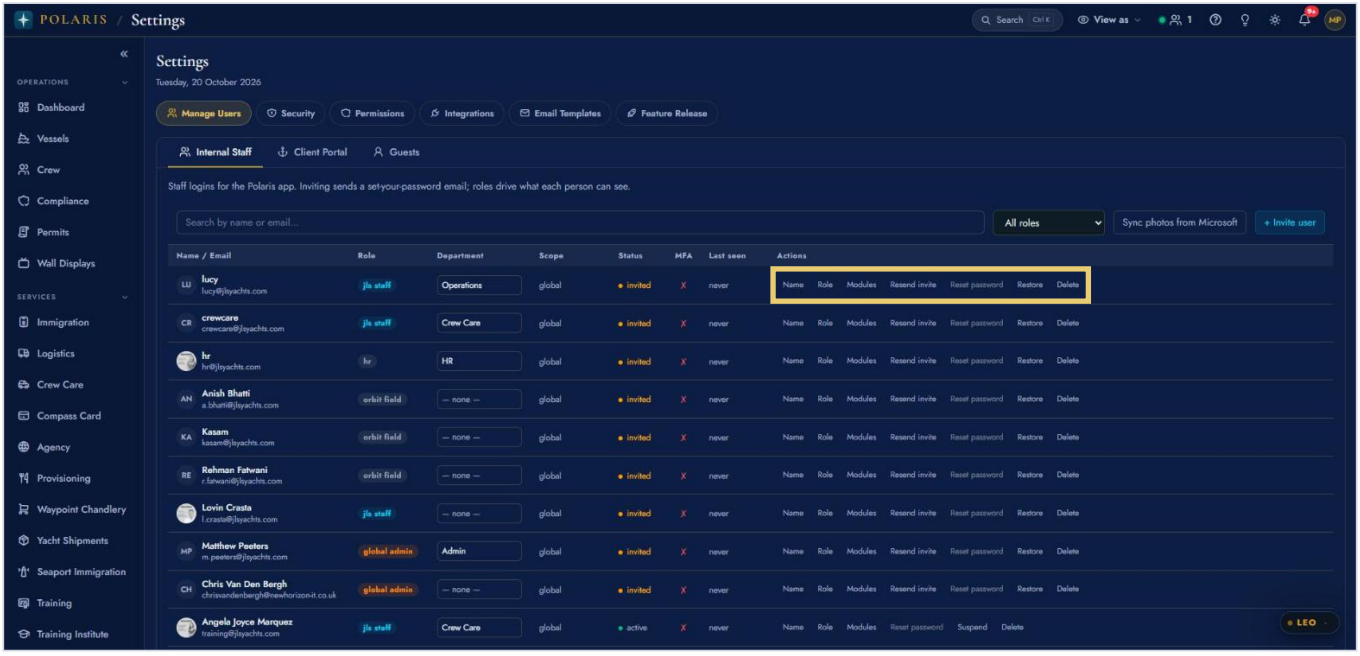

2 Invite them

Click **Invite user**. Enter their **Email address**, choose the **Department** (this decides which modules they see) and the **Access level**, then **Send invite**. They get an email to set their password.

3 Adjust one person

On their row, **Role** changes their access level and **Modules** fine-tunes which modules they can use beyond their department's defaults. **Resend invite**, **Reset password**, **Suspend** and **Delete** are there too.

> **Tip:** Use View as (top bar) to see Polaris exactly as that person will.

4 Set what a department can do

On **Permissions**, choose a department on the left and tick **View**, **Create** and **Edit** for each module. Click **Save Changes**.
