Log an Orbit 2 project or bunkering job

4 steps · about 3 min

Record vessel service jobs and bunkering for managed boats and track them to invoicing.

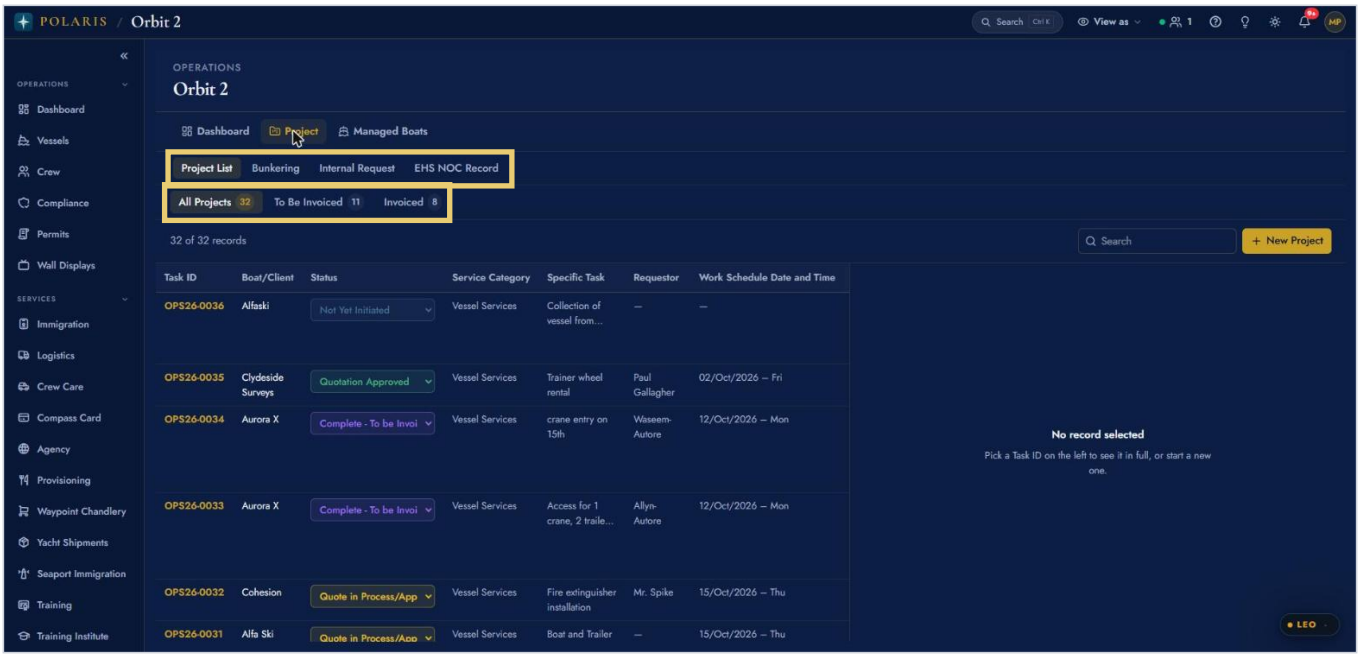

1 Open Orbit 2

Click **Orbit 2**. **Dashboard** shows the project mix, completion rate, per-client status, a calendar and team management. **Export to Excel** downloads the records; **Mobile App** opens the field app.

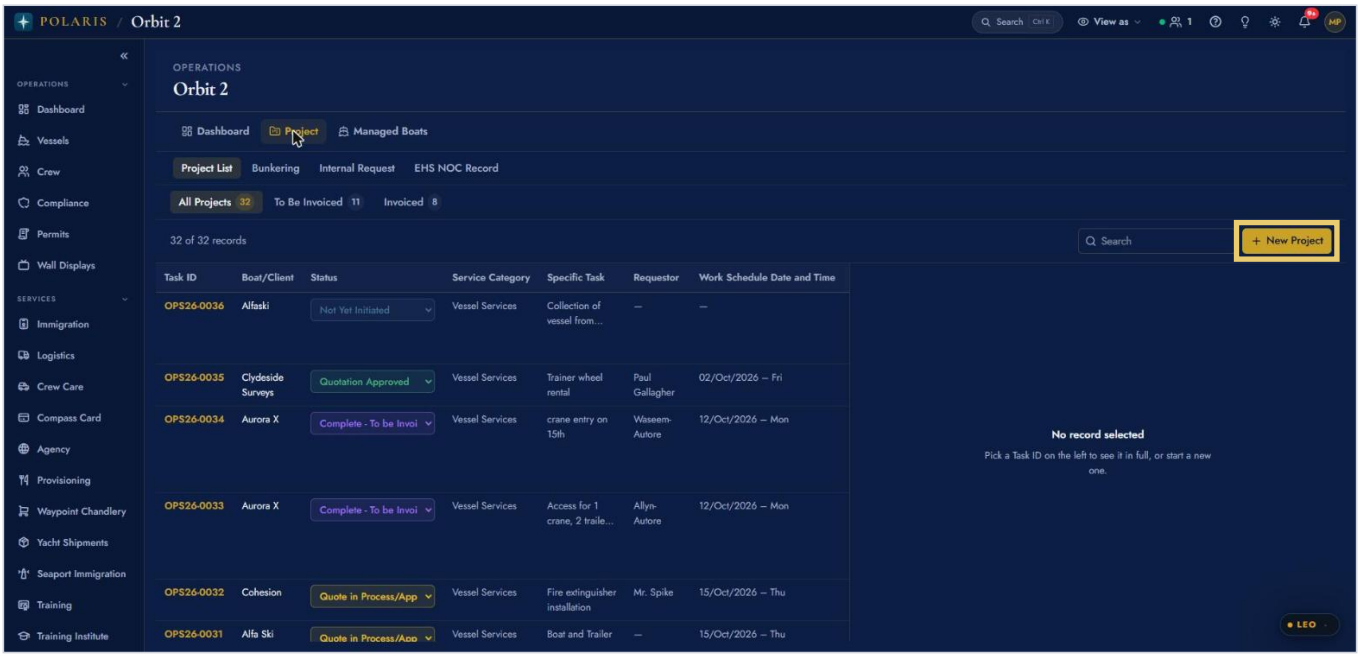

2 Find projects

Click **Project**, then **Project List**, **Bunkering**, **Internal Request** or **EHS NOC Record**. Switch between **All**, **To Be Invoiced** and **Invoiced**, or search.

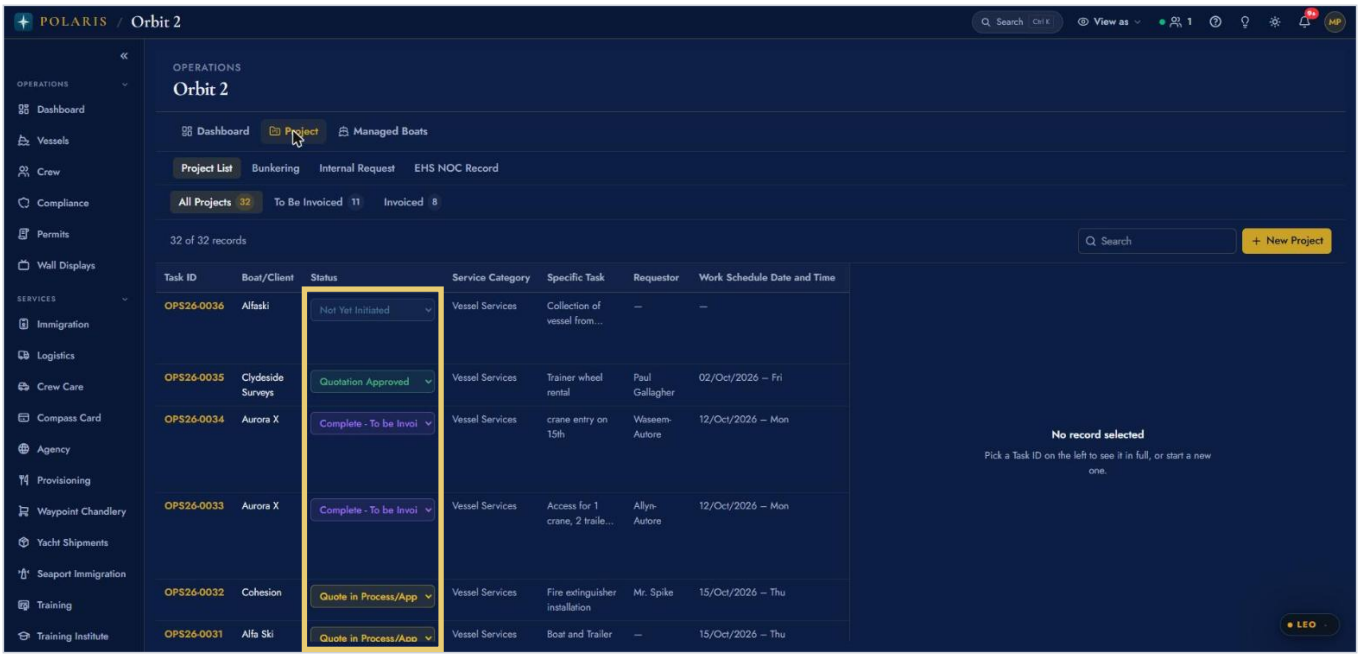

3 Add a project

Click **New Project** (or **New Bunkering**). The form opens on the right — **Boat / Client Name** is required; add the service category, requestor, task, contact, schedule, location, supplier, quote and team. Click **Submit** — the Task ID is created then.

4 Update the status

Change a job's **Status** in the table as it moves from quote to approved to complete and invoiced. Open a job to add remarks, team comments, quotes, invoices and photos.

> **Tip:** The Status dropdown in the table saves straight away. Notify client / Send request form emails or WhatsApps the client — use it deliberately.
