POLARIS

Settings How-to Guides

10 guides · step by step, with screenshots

Contents

1. Invite a staff member and set their access
Give a colleague a Polaris login and choose which modules they can see.

2. See Polaris as someone else (View as)
Preview exactly what a colleague or a client captain sees, without logging in as them.

3. Release a feature (Dev Settings)
Move a feature from Dev Only to Beta to Live, and choose who can preview dev features.

4. Check scheduled automations
See every automated job, whether it ran, and switch one on or off.

5. Check and run syncs (Sync Centre)
See when each sync with SharePoint, QuickBooks, vessel tracking and Monday last ran, and run one now.

6. Review errors and warnings
See errors captured from everyone's browser, with the page and person, and mark them resolved.

7. See what's new (Changelog)
Read the history of new features, fixes and improvements to Polaris.

8. See who uses Polaris (Staff Usage)
See how often each member of staff uses Polaris and which areas they work in.

9. Restore something deleted (Recycle Bin)
Bring back a crew member, yacht or visa application deleted in the last 90 days.

10. Report a bug or suggest a feature
Send feedback from any page, and (admins) triage what comes in.

POLARIS · HOW-TO GUIDE · SETTINGS

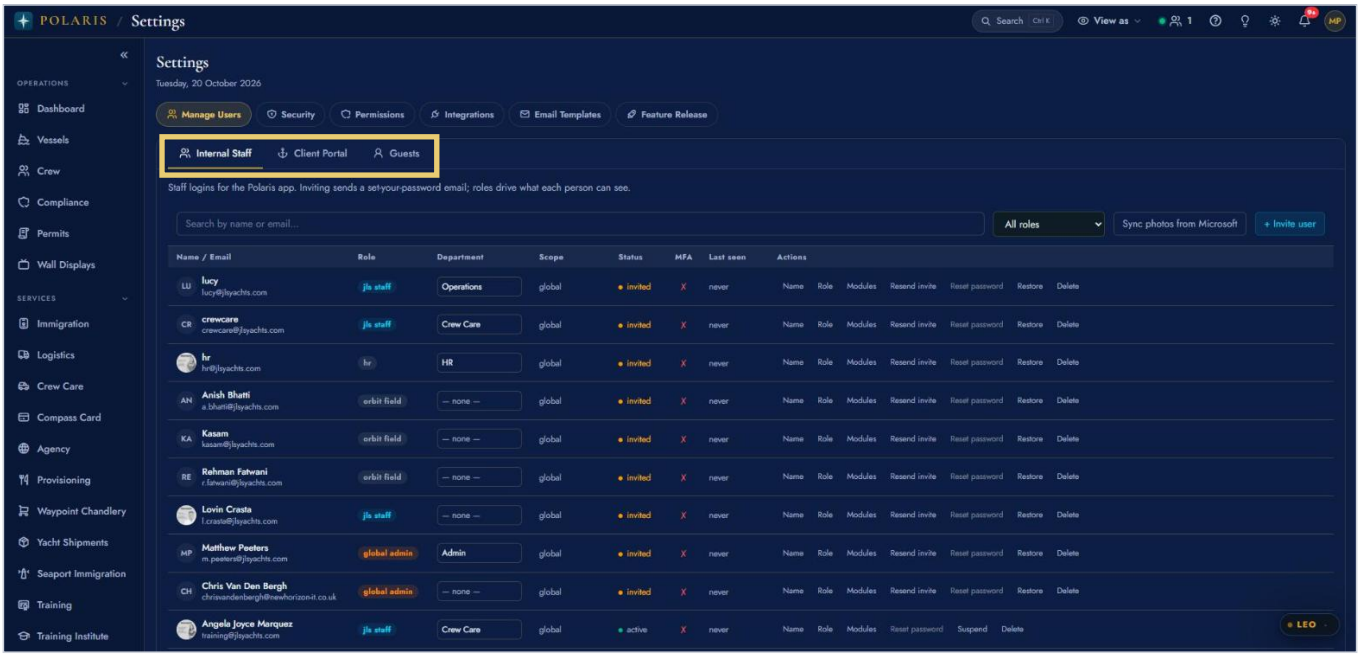

Invite a staff member and set their access

4 steps · about 3 min

Give a colleague a Polaris login and choose which modules they can see.

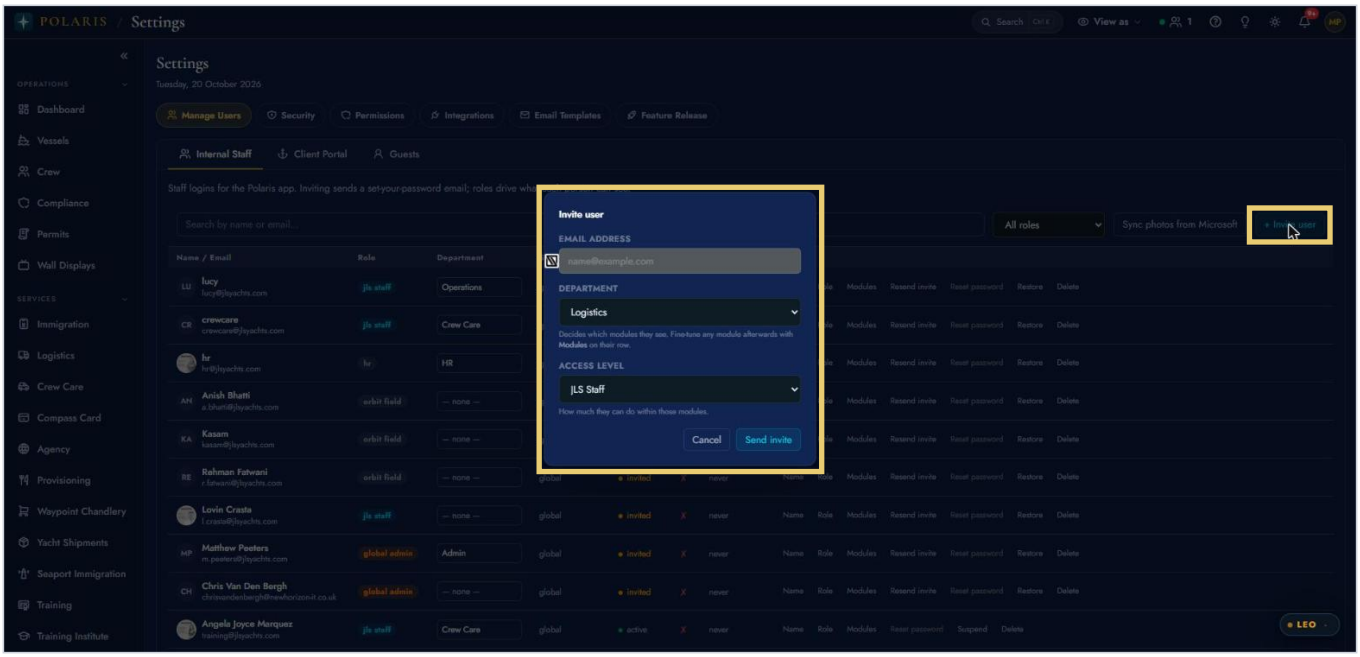

1 Open Manage Users

Click **Settings** -> **Manage Users**. **Internal Staff** lists every staff login with their role, department, status, 2FA and last seen. **Client Portal** and **Guests** hold captains' and outside guests' logins.

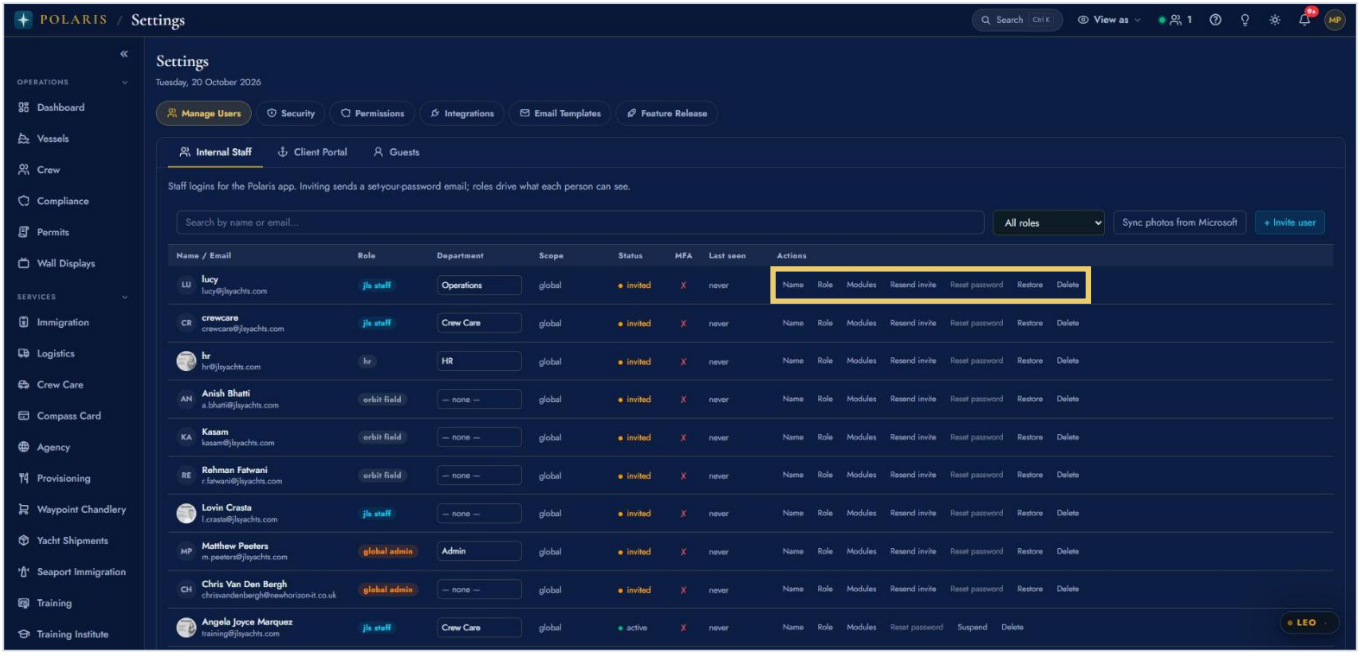

2 Invite them

Click **Invite user**. Enter their **Email address**, choose the **Department** (this decides which modules they see) and the **Access level**, then **Send invite**. They get an email to set their password.

3 Adjust one person

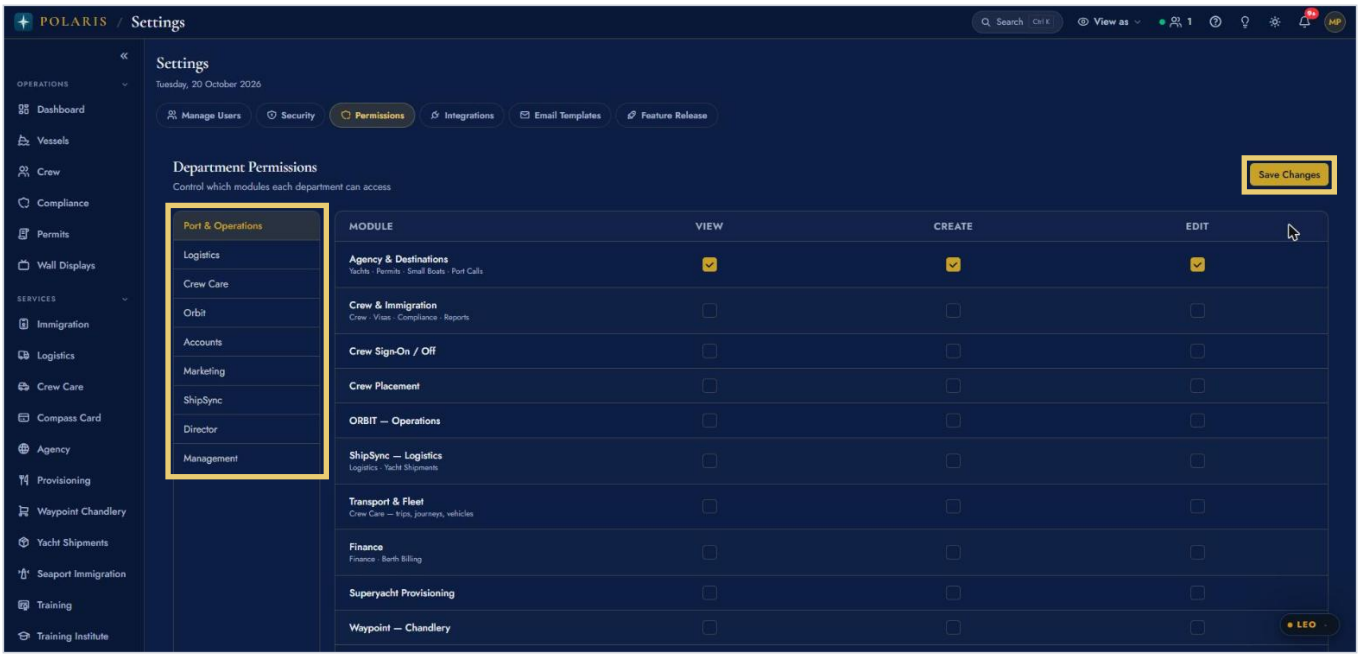

On their row, **Role** changes their access level and **Modules** fine-tunes which modules they can use beyond their department's defaults. **Resend invite**, **Reset password**, **Suspend** and **Delete** are there too.

> **Tip:** Use View as (top bar) to see Polaris exactly as that person will.

4 Set what a department can do

On **Permissions**, choose a department on the left and tick **View**, **Create** and **Edit** for each module. Click **Save Changes**.

See Polaris as someone else (View as)

2 steps · about 1 min

Preview exactly what a colleague or a client captain sees, without logging in as them.

1 Pick a person

Click **View as** in the top bar and search for the person. Polaris shows their menu and pages with their real access, under an amber **Viewing as …** banner. Choosing a captain opens their Client Portal read-only.

2 Exit

Click **Exit view** on the banner (or choose **Admin (full access)**) to go back to your own view. Everything you do while previewing still runs as you.

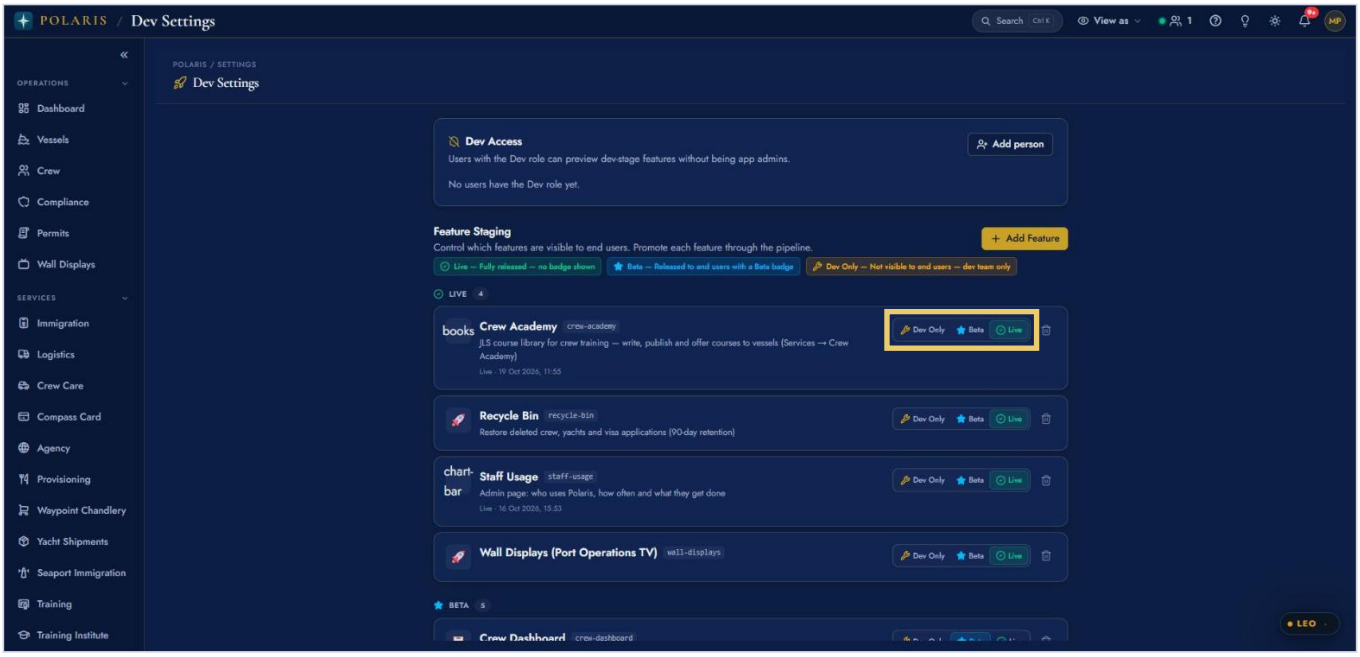

Release a feature (Dev Settings)

2 steps · about 2 min

Move a feature from Dev Only to Beta to Live, and choose who can preview dev features.

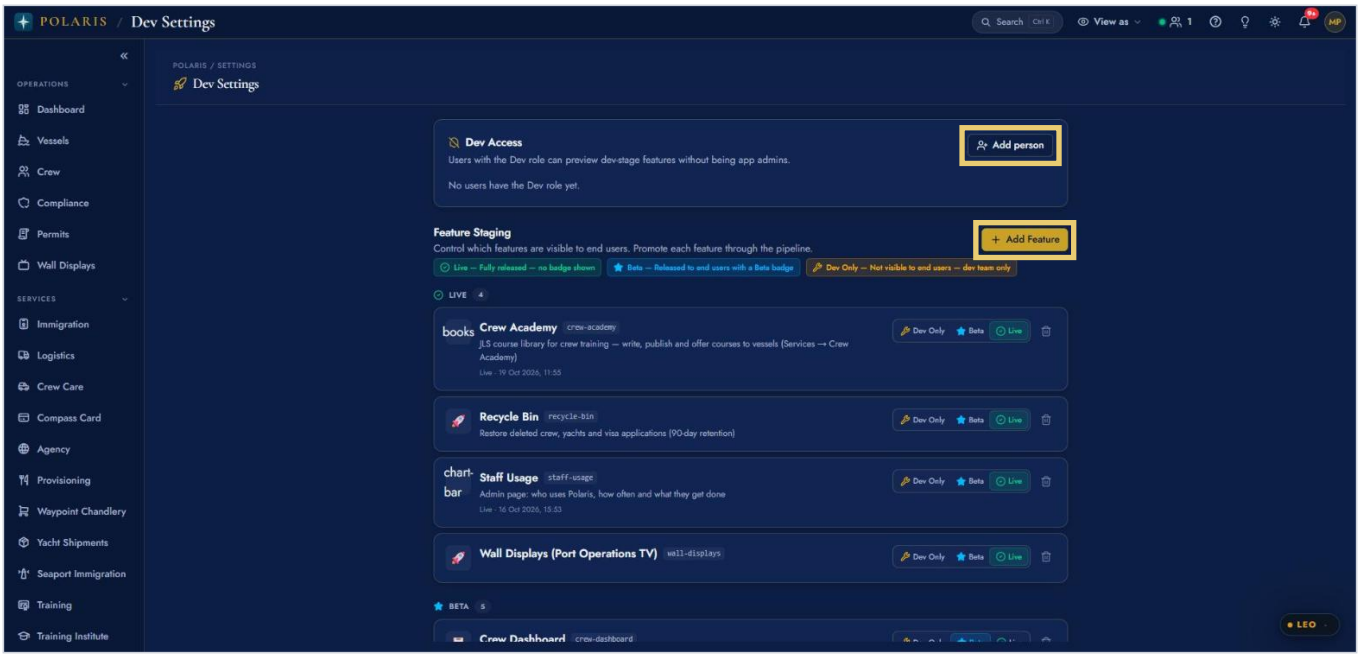

1 Change a feature's stage

Click **Dev Settings**. Under **Feature Staging**, each feature has three stages: **Dev Only** (only the dev team sees it), **Beta** (everyone, with a Beta badge) and **Live** (fully released). Click the stage you want — it changes straight away.

2 Give someone dev access

Under **Dev Access**, **Add person** lets a colleague preview Dev Only features without being an admin. **Add Feature** registers a new feature flag (it starts as Dev Only).

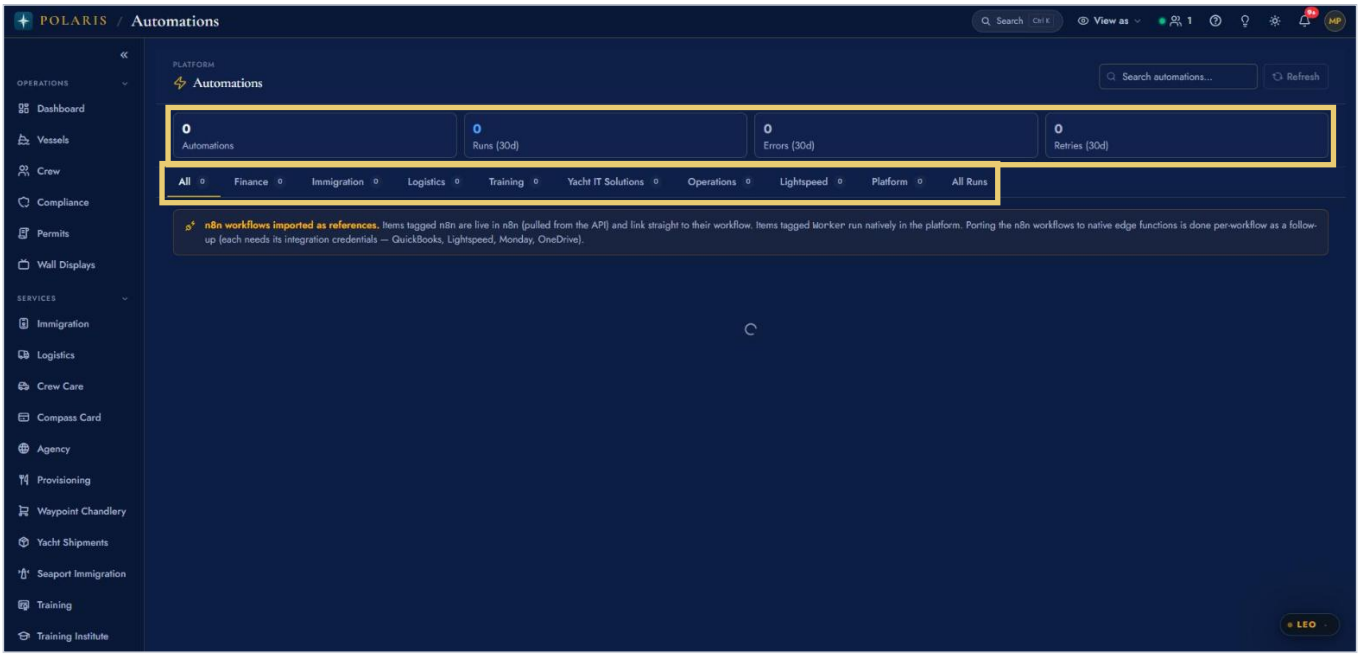

Check scheduled automations

2 steps · about 2 min

See every automated job, whether it ran, and switch one on or off.

1 Open Automations

Click **Automations**. The cards count automations, runs, errors and retries in the last 30 days. Filter by department, or open **All Runs** for the run history.

2 Manage an automation

Each card has an on/off switch, **Steps** to see what it does and **Run log** for its recent runs. Email automations let you set the send time (Dubai) and recipients — click **Save**.

> **Tip:** The switch takes effect immediately. Re-run on All Runs runs the job again for real.

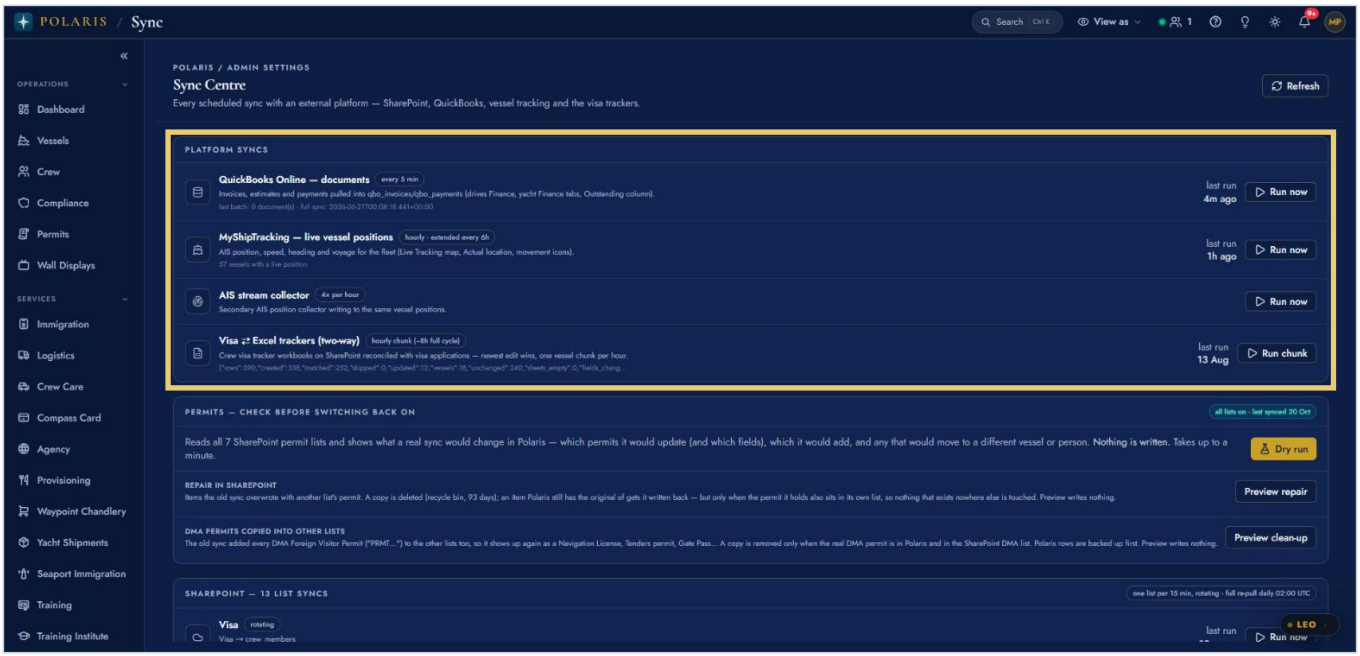

Check and run syncs (Sync Centre)

3 steps · about 2 min

See when each sync with SharePoint, QuickBooks, vessel tracking and Monday last ran, and run one now.

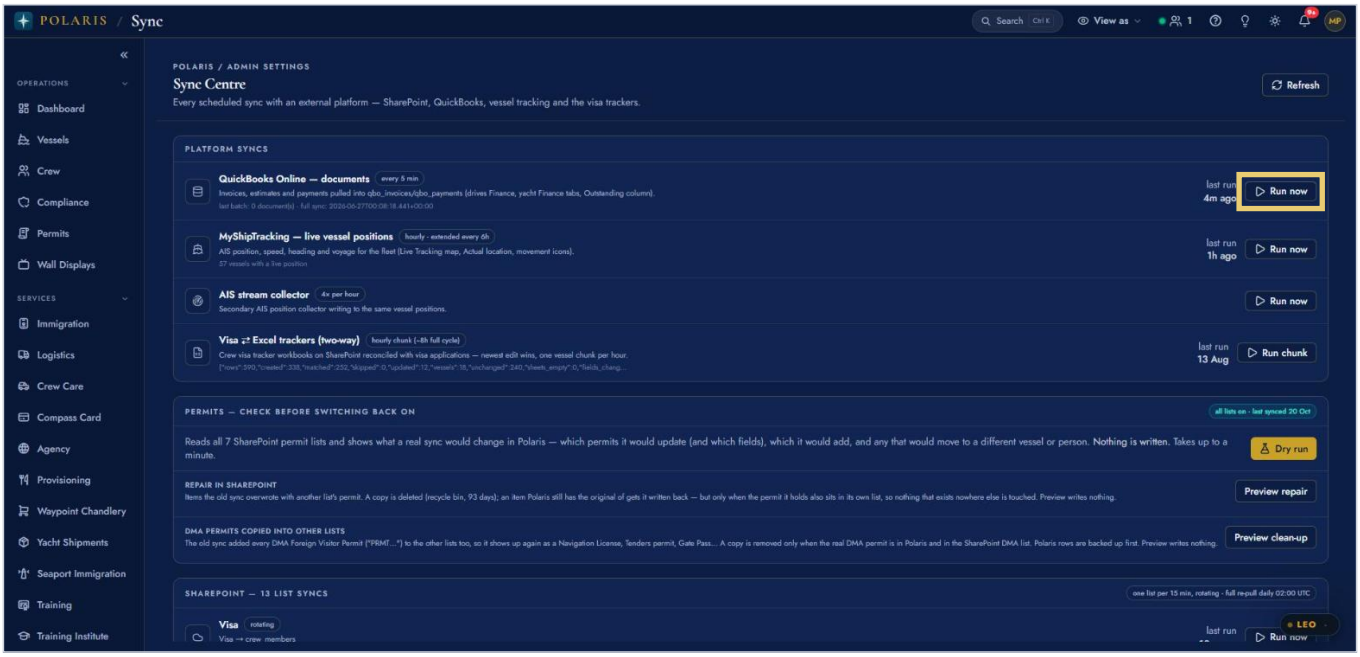

1 Check the last run

Click **Sync**. **Sync Centre** lists every scheduled sync — QuickBooks documents, vessel positions, the visa trackers, the SharePoint lists, ShipSync and Monday — with how often it runs and when it last ran.

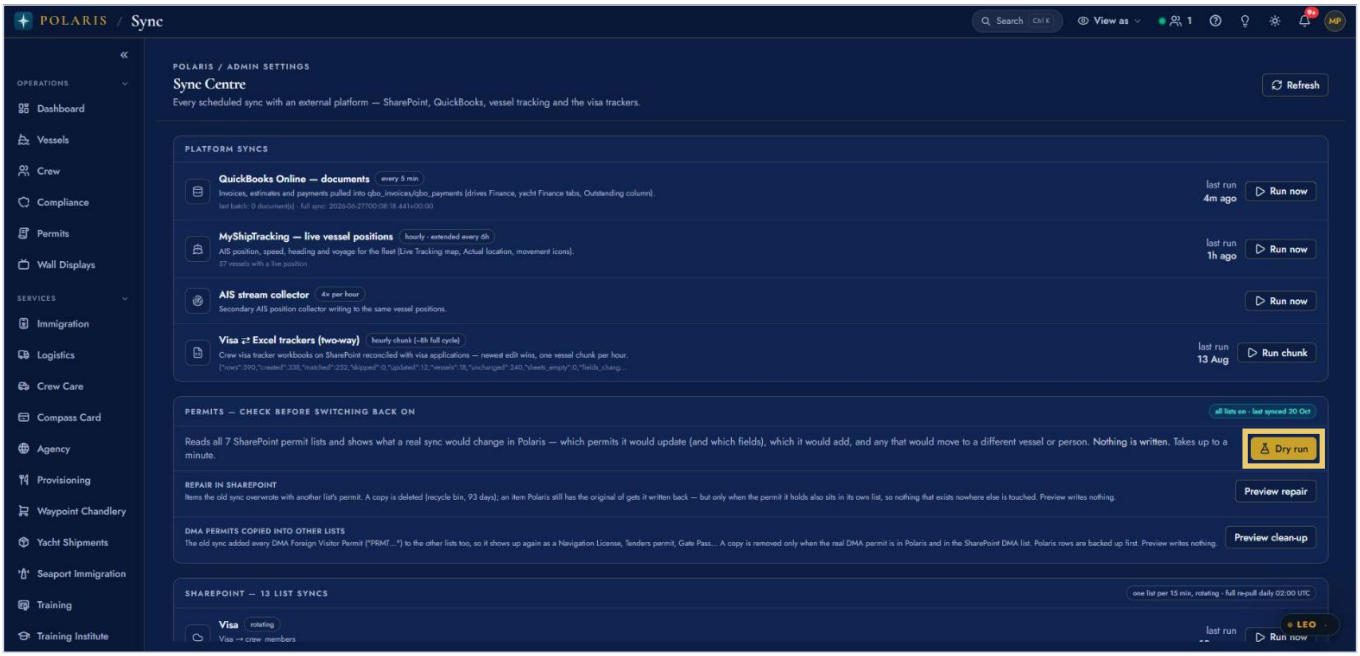

2 Run one now

Click **Run now** (or **Run chunk**) to run a sync straight away rather than waiting for its schedule.

3 Dry-run the permits first

For permits, click **Dry run** to see what a real sync would change — nothing is written. **Preview repair** and **Preview clean-up** show fixes before you apply them.

> **Tip:** Run now and Apply change data straight away — use the previews first.

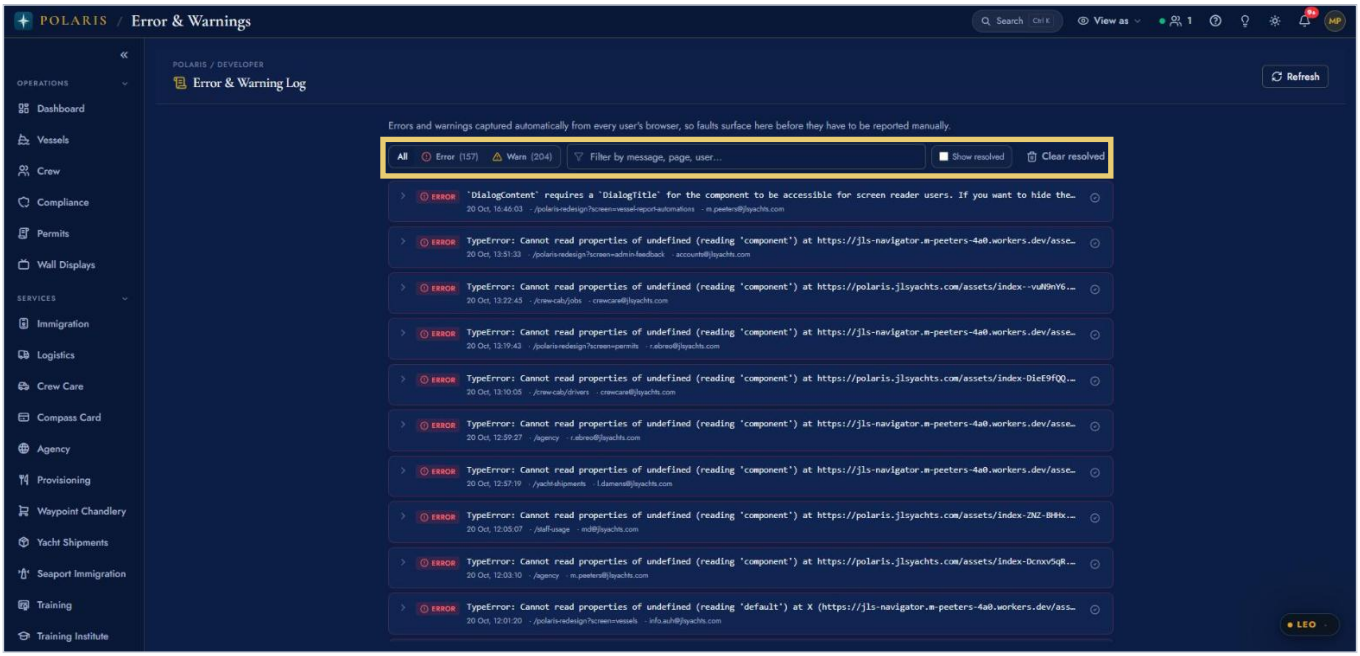

Review errors and warnings

2 steps · about 1 min

See errors captured from everyone's browser, with the page and person, and mark them resolved.

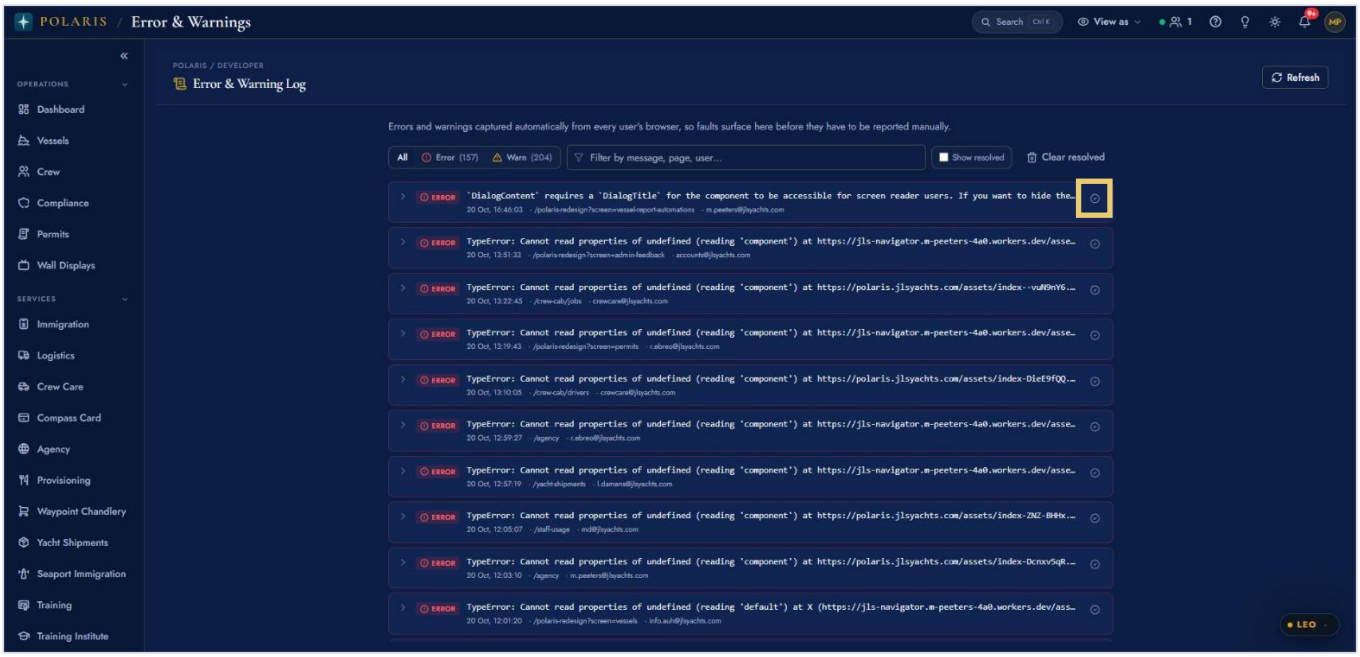

1 Find an error

Click **Error & Warnings**. Filter **Error** or **Warn**, or type part of the message, page or user. Click a row for the full details — page, stack trace and what the person did just before.

2 Mark it resolved

Click the tick at the end of a row once it's fixed. **Show resolved** brings them back; **Clear resolved** deletes them permanently.

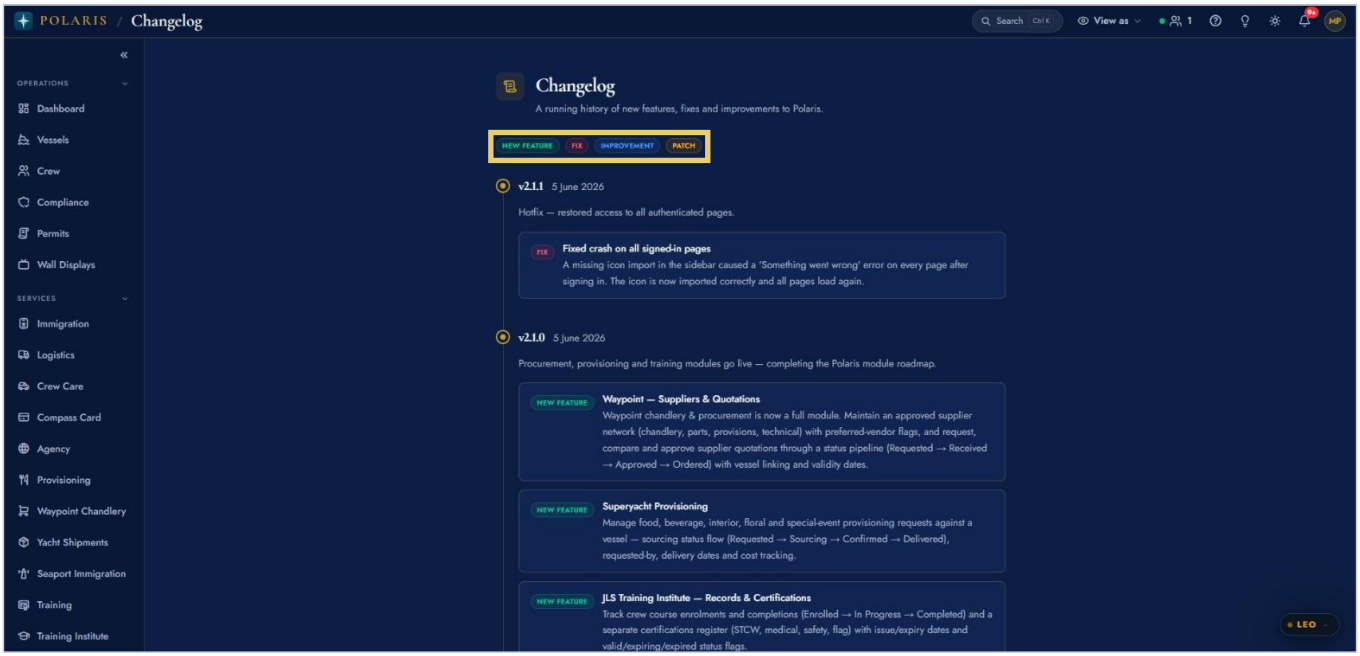

See what's new (Changelog)

1 steps · about 1 min

Read the history of new features, fixes and improvements to Polaris.

1 Read the changelog

Click **Changelog** for every release, newest first. Each change is tagged **New feature**, **Fix**, **Improvement** or **Patch**.

See who uses Polaris (Staff Usage)

2 steps · about 1 min

See how often each member of staff uses Polaris and which areas they work in.

1 Read the summary

Click **Staff Usage**. The tiles group staff as **Daily**, **Regular**, **Light**, **Signed in once**, **New** and **No login** — click one to filter. The chart shows how many staff used Polaris each week.

2 Look at one person

Everyone, by person lists days in, days this week, hours open, actions, main area and last active. Click a column to sort, or search by name, email or area.

Restore something deleted (Recycle Bin)

2 steps · about 1 min

Bring back a crew member, yacht or visa application deleted in the last 90 days.

1 Find it

Click **Recycle Bin**. Filter by **Crew members**, **Yachts** or **Visa applications**. Each item shows who deleted it and how many days are left before it's gone for good (items are kept for 90 days).

2 Restore it

Click **Restore** — it goes straight back where it was. **Delete forever** removes it permanently (you'll be asked to confirm).

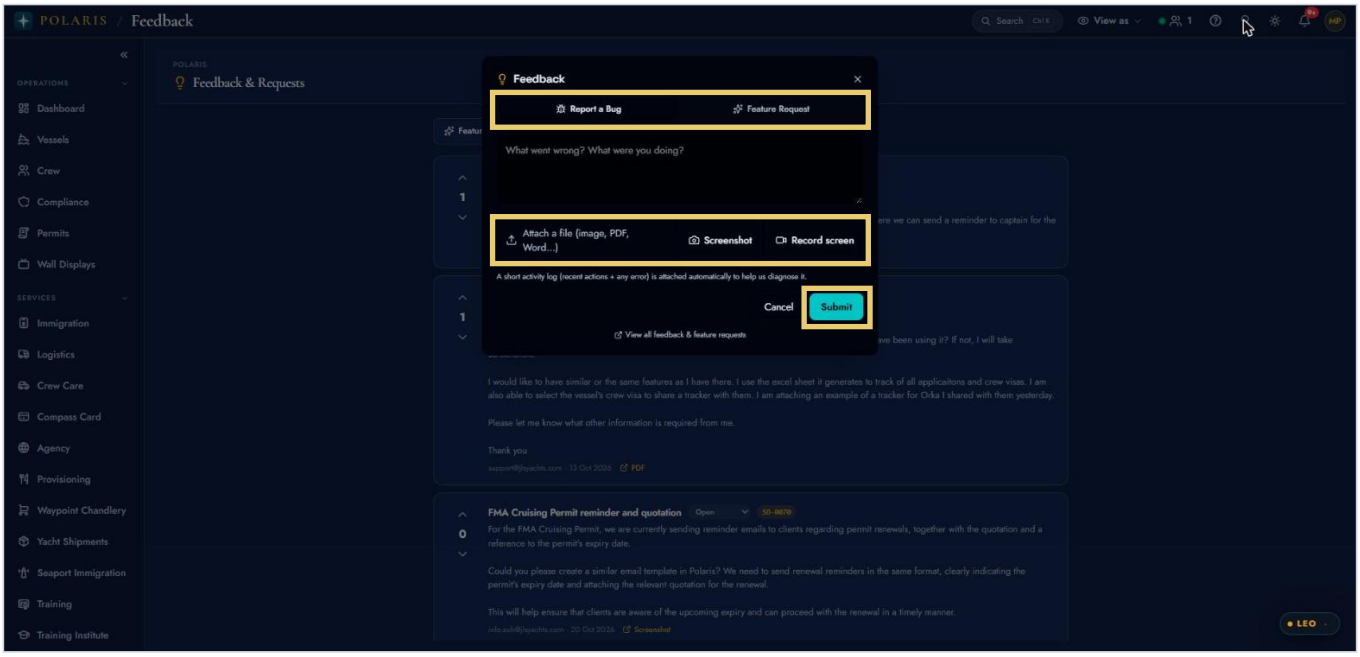

Report a bug or suggest a feature

2 steps · about 2 min

Send feedback from any page, and (admins) triage what comes in.

1 Send feedback from any page

Click the **lightbulb** in the top bar. Choose **Report a Bug** or **Feature Request**, describe it, and add a file, a **Screenshot** or a **Record screen** clip. Click **Submit** — a short log of what you were doing is attached automatically.

2 Triage it (admins)

Feedback lists **Feature Requests** and **Bug Reports**. Vote requests up or down, and set each one's status — open, planned, in progress, done or closed. Each has a Service Desk ticket number.
