Track yacht shipments

4 steps · about 3 min

Follow yachts being shipped in and out — from new lead to complete — on the shipments board.

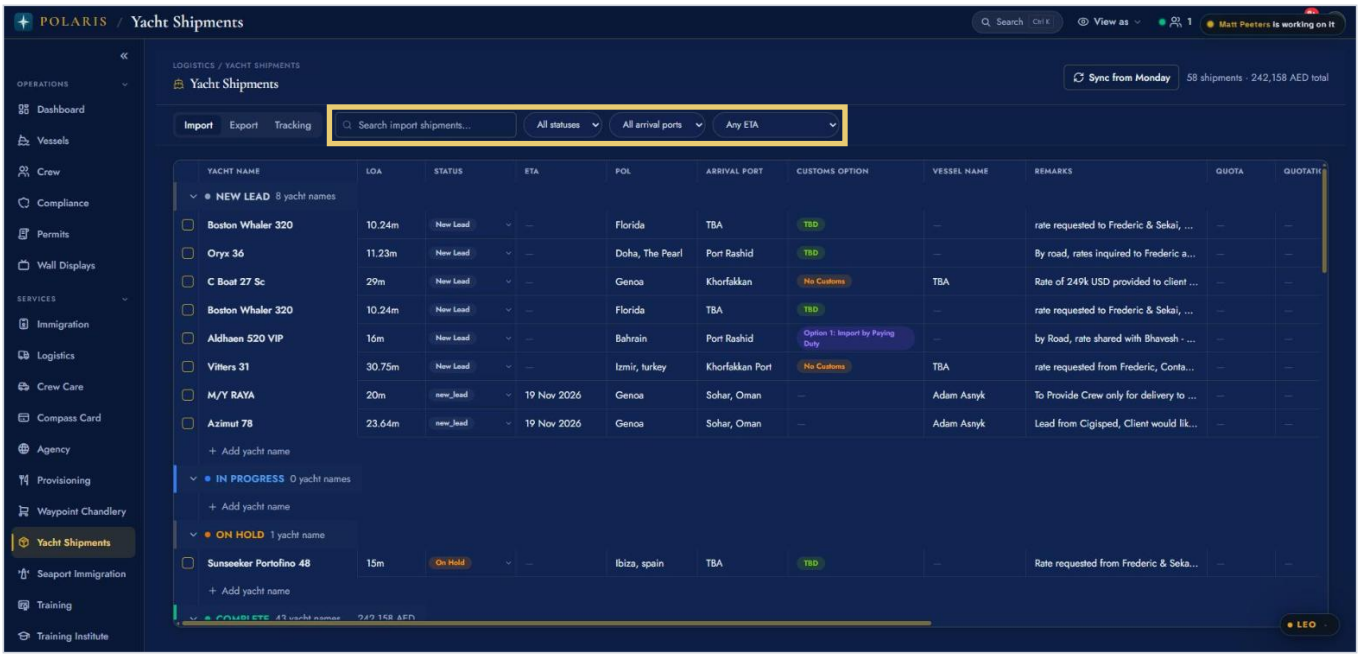

1 Open Yacht Shipments

Click **Yacht Shipments**. Choose **Import**, **Export** or **Tracking** (live positions). The board groups shipments by status: **New Lead**, **In Progress**, **On Hold**, **Complete**, **Cancelled**.

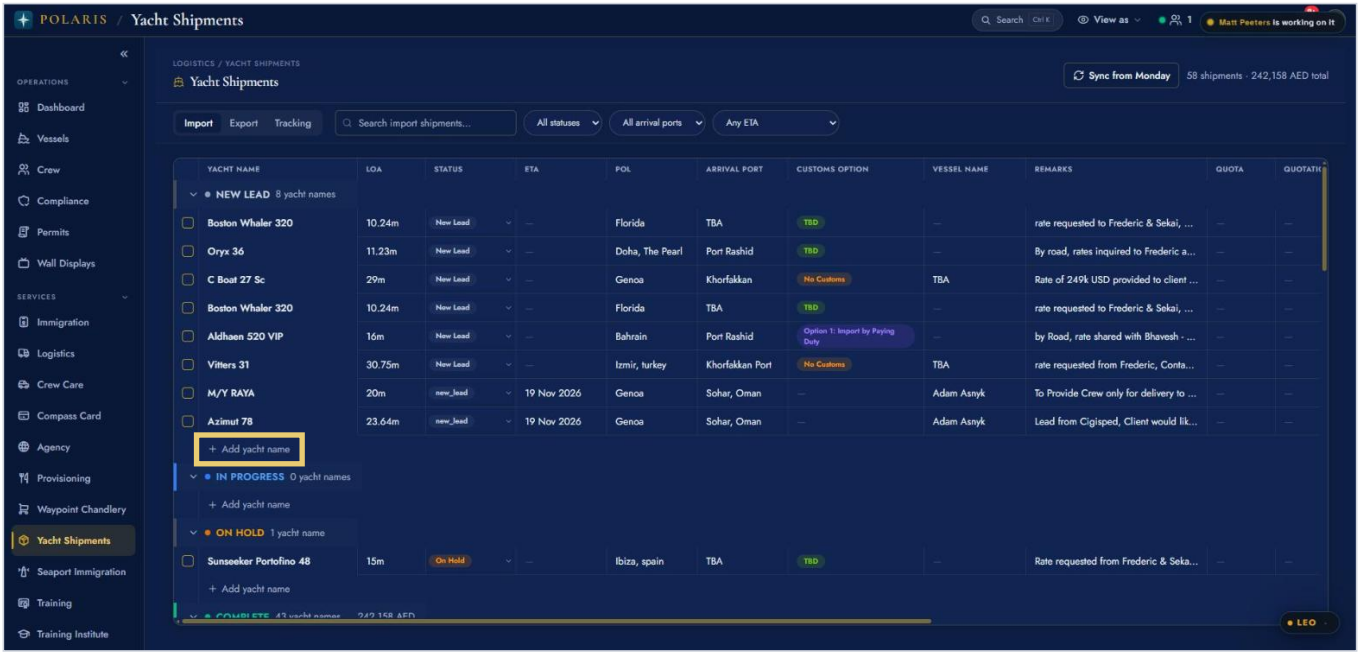

2 Filter the board

Search by yacht, and filter by status, arrival port and ETA (next 30 days, this month, passed, no ETA). On Export the filters use departure port and loading date.

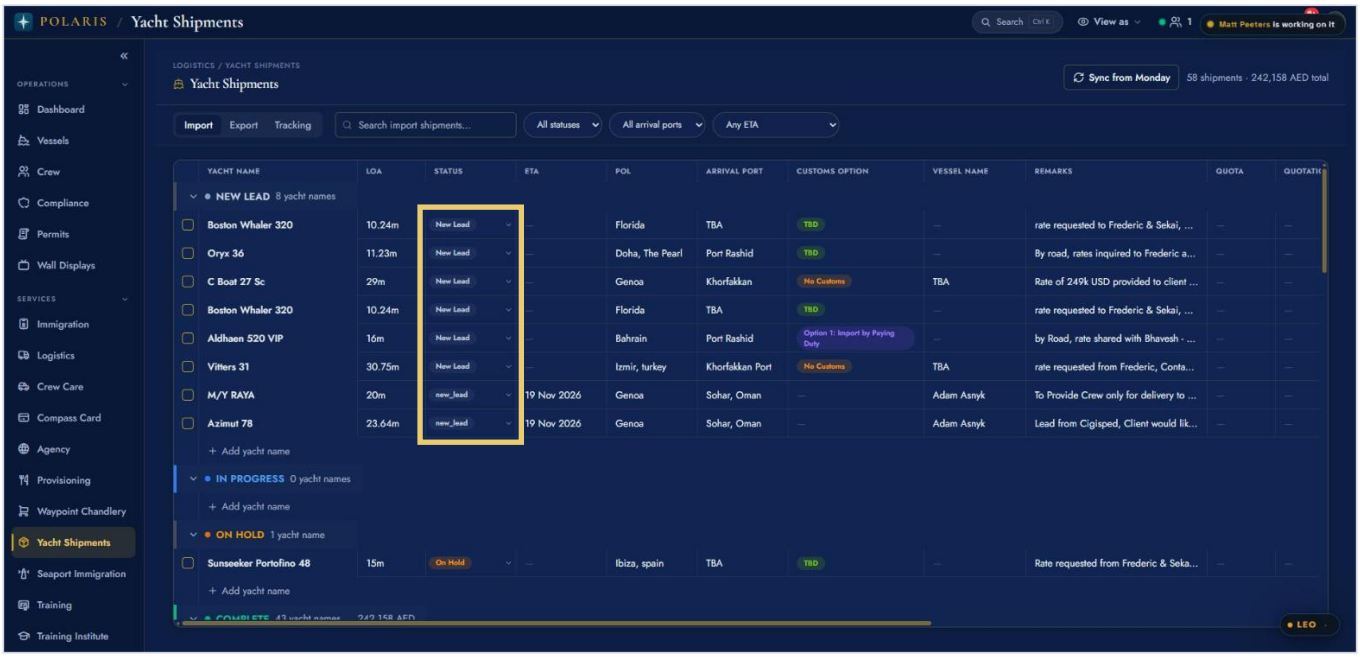

3 Add a shipment

Under the right status group, click **Add yacht name**, type the yacht's name or model and press **Add**. Then fill in its row — LOA, ETA, port of loading, arrival port, customs option, remarks and quotation.

4 Update a shipment

Click any cell to change it. Click the **Status** pill to move the shipment to another group, e.g. from New Lead to In Progress.

> **Tip:** Changes save as soon as you press Enter or click away, and the bin deletes a row without asking — take care.
