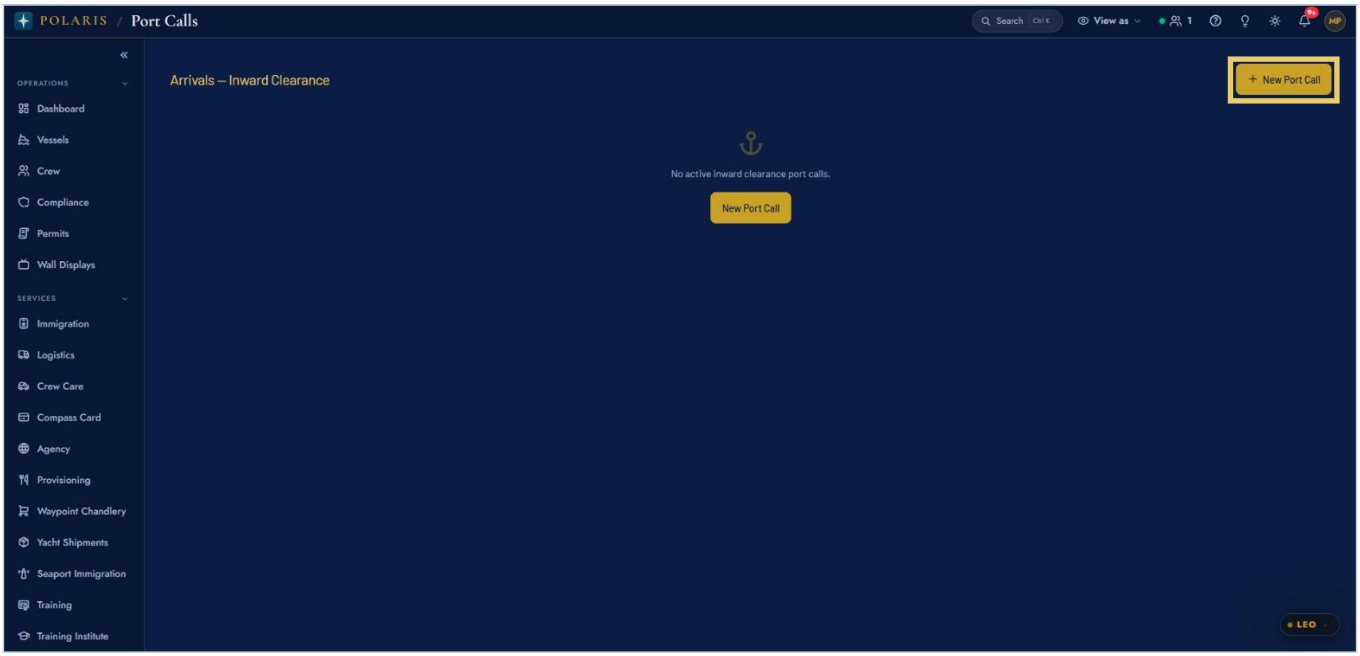
Open a port call (inward clearance)

3 steps · about 3 min

Create a port call for an arriving yacht and work through its inward clearance steps.

1 Open Port Calls

Click **Port Calls**. **Arrivals — Inward Clearance** lists active port calls with the vessel, ETA, status, office and how many clearance steps are done.



2 Create the port call

Click **New Port Call**. Choose the **Vessel** and **Destination Country** (UAE by default) — both required — and add the ETA, ETD and the office and agent handling it. Click **Create Port Call**; Polaris also sets up the pre-arrival document checklist.

3 Work the clearance

Open the port call and click **Start Inward Clearance**. Click **Start** and **Complete** on each step as it's done, and set each pre-arrival document to **Valid**, **Invalid** or **Expired** as you check it.

> **Tip:** Step buttons and document statuses save as soon as you click them.
