Raise and handle a Crew Care job card

4 steps · about 3 min

Request transport or crew logistics, and take a job card through to a trip.

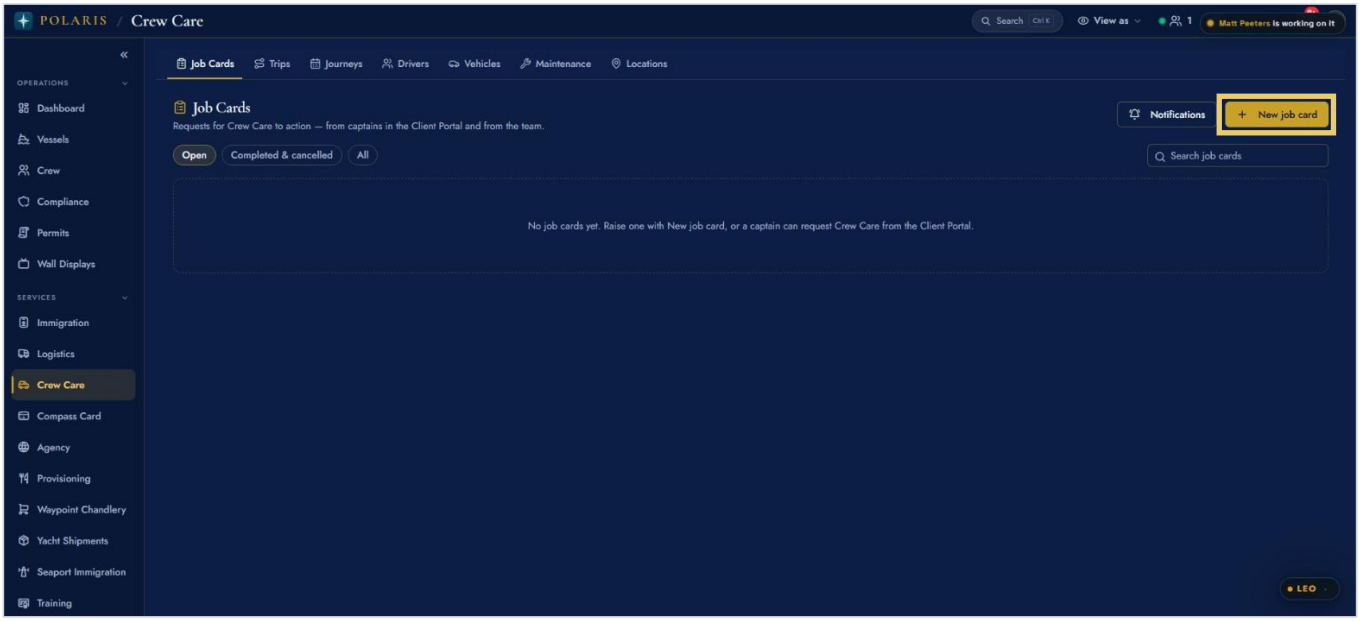

1 Open Crew Care

Click **Crew Care**. **Job Cards** lists requests for the Crew Care team — from captains in the Client Portal and from staff. Switch between **Open**, **Completed & cancelled** and **All**, or search.

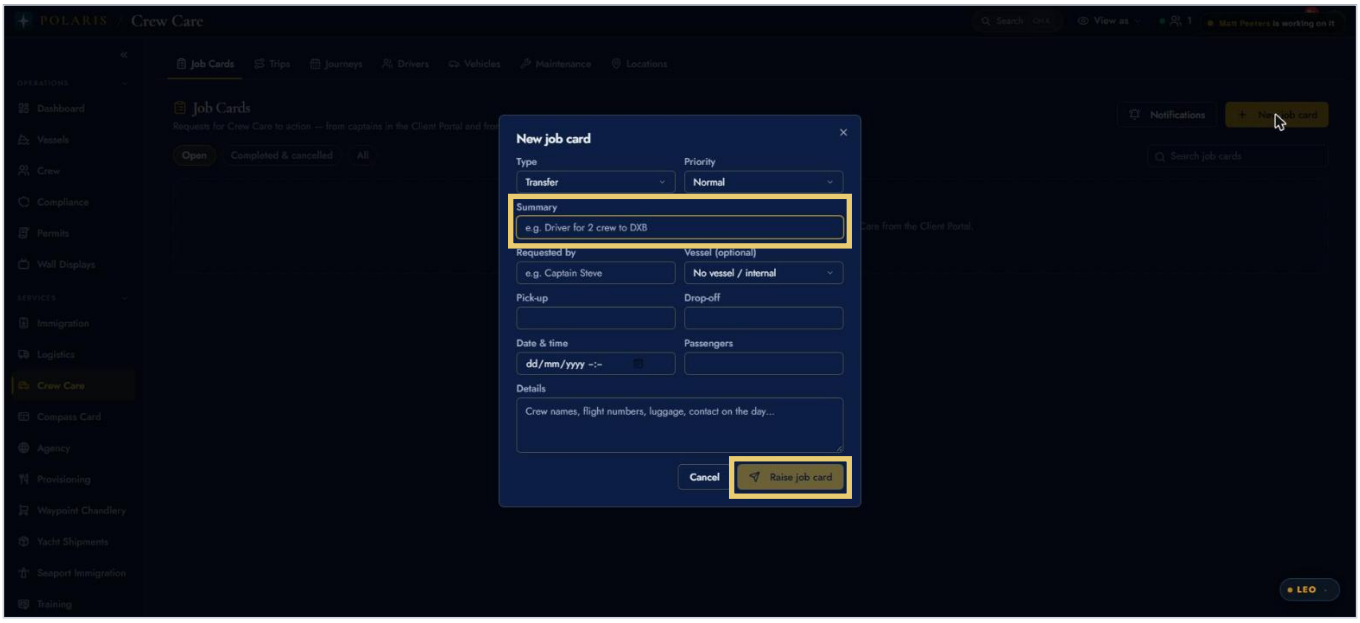

2 Click New job card

Click **New job card**.

3 Describe the job

Choose the **Type** (Transfer, Driver needed, Airport run, …) and **Priority**, and write a **Summary** (required), e.g. "Driver for 2 crew to DXB". Add who asked, the vessel, pick-up and drop-off, date & time, passengers and any details. Click **Raise job card** — the Crew Care team is notified.

4 Handle the job

Open a job card to set its **Status** and **Assigned to** (assigning someone marks it Acknowledged). Click **Create trip** to turn it into a trip — then assign the driver and vehicle in **Trips**. Finish with **Mark completed**.

> **Tip:** Notifications chooses who is emailed or messaged in Teams when a new job card comes in.
