POLARIS · HOW-TO GUIDE · SERVICES

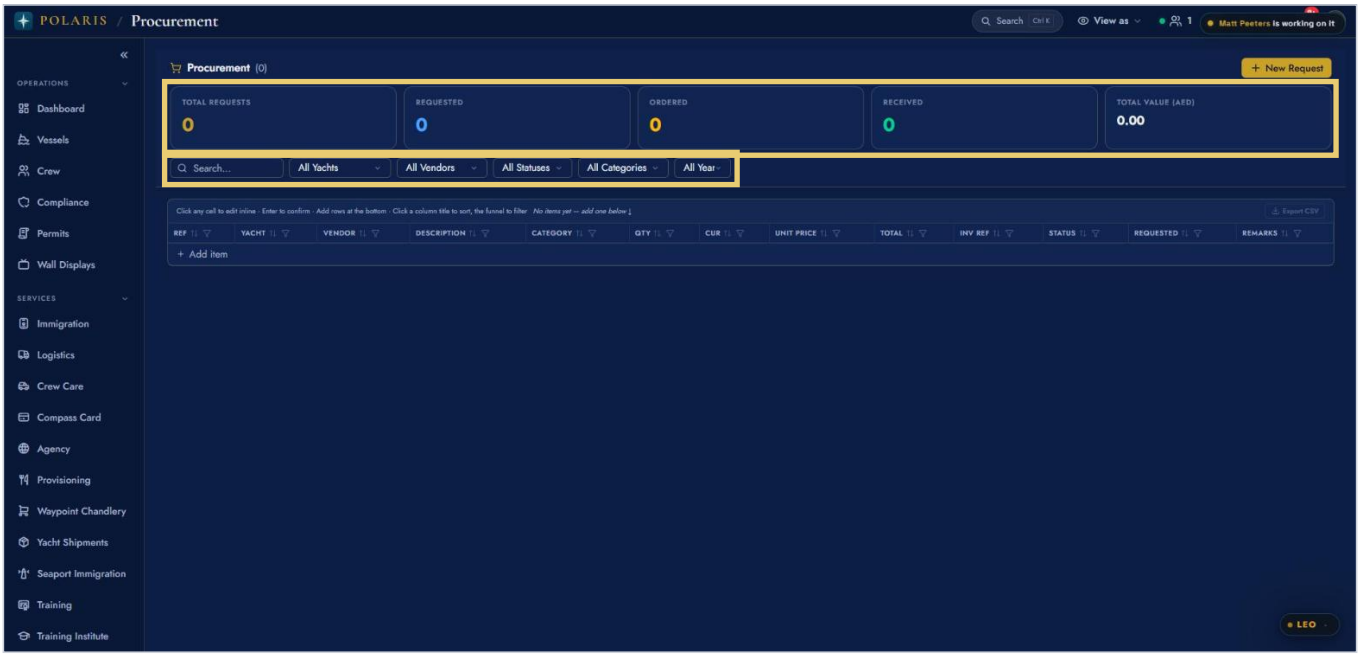

Record a procurement request

3 steps · about 2 min

Log purchases for a yacht and follow them from requested to ordered to received.

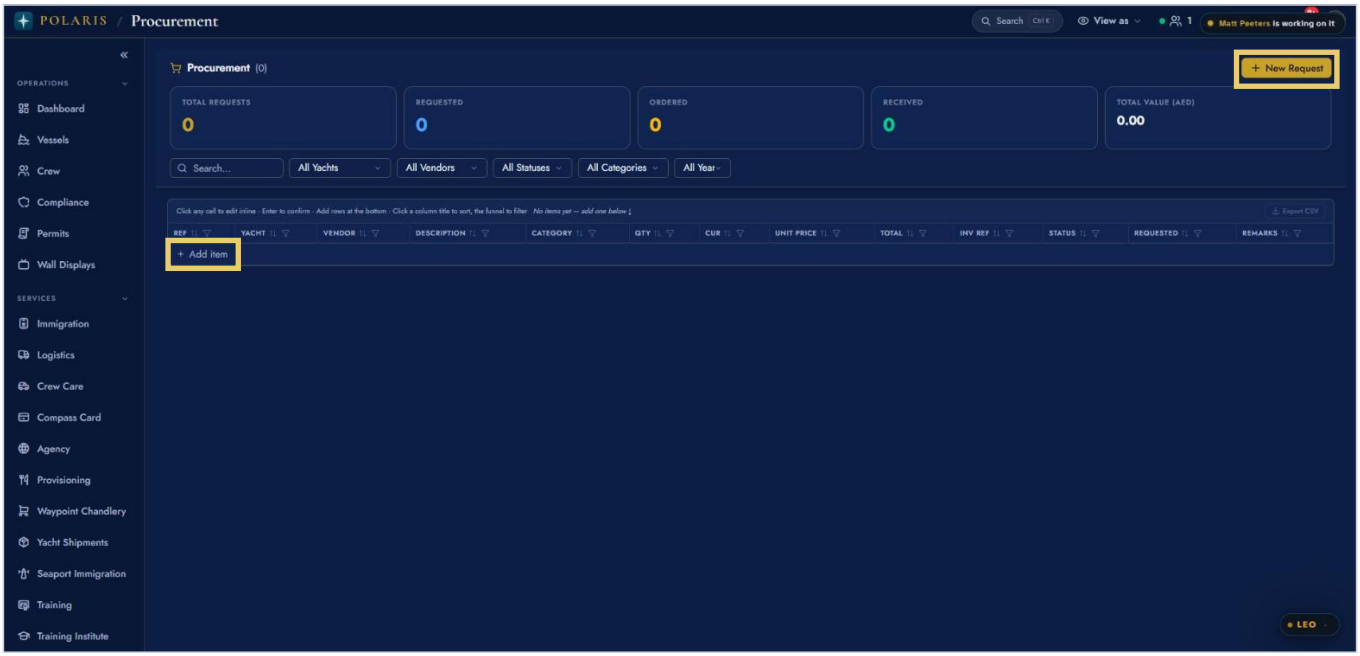

1 Open Procurement

Click **Procurement**. The cards show the number of requests that are **Requested**, **Ordered** and **Received**, and the total value. Filter by yacht, vendor, status, category and year.

2 Add a request

Click **New Request**. **Yacht**, **Vendor** and **Description** are required; add the category, quantity, currency and unit price, invoice ref and dates, then **Create Request**. You can also click **Add item** at the bottom of the table to type a row in directly.

3 Update and export

Click any cell to change it — for example set **Status** to Ordered, then Received. **Export CSV** downloads the list.

> **Tip:** Table edits save when you press Enter or click away. Delete removes a request permanently.
