Route and dispatch deliveries

4 steps · about 3 min

Put waiting parcels on a route, choose the driver and van, and dispatch the run.

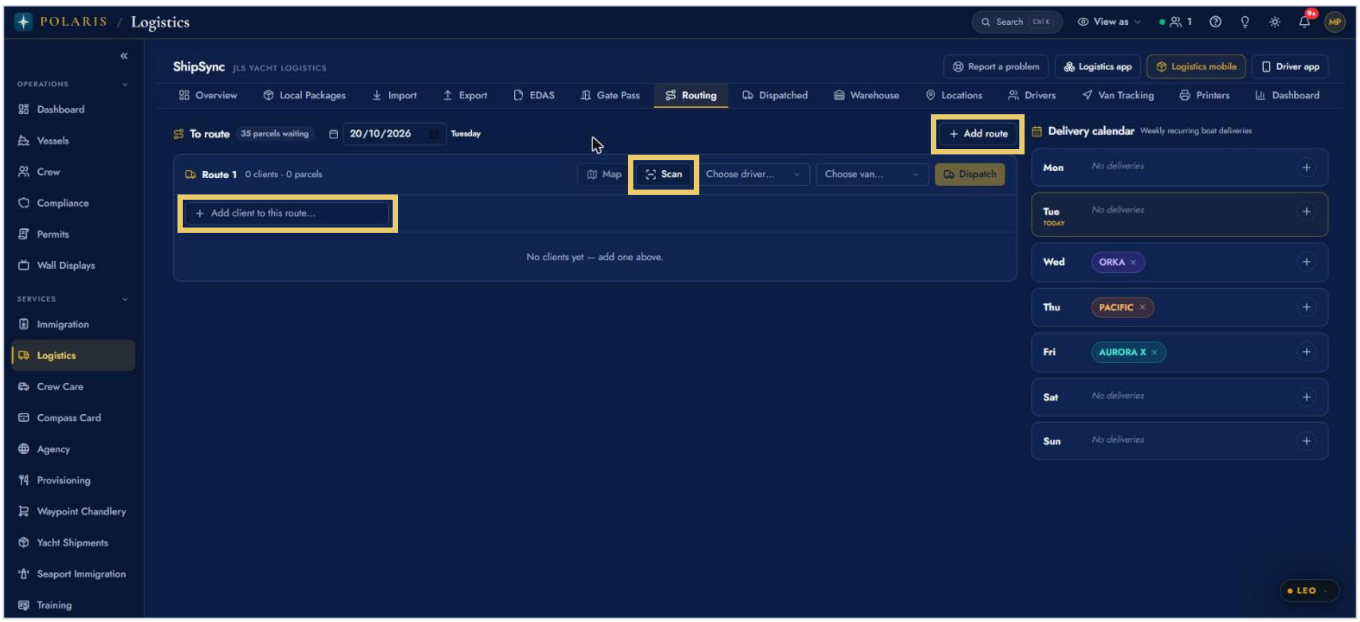

1 Open Routing

In **Logistics**, click **Routing**. **To route** shows how many parcels are waiting; pick the delivery date. The **Delivery calendar** on the right shows which boats get a regular delivery on each day.

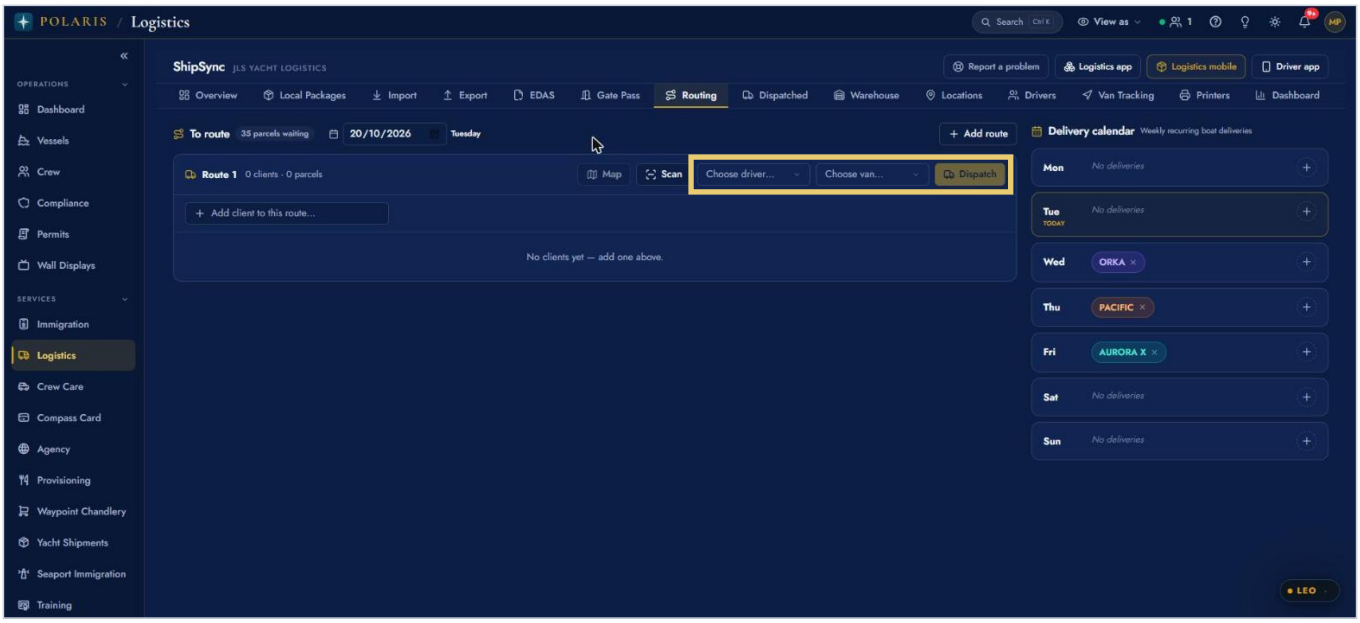

2 Add clients to the route

Click **Add client to this route…** and choose a boat — its waiting parcels are added. **Scan** adds individual parcels with the scanner; **Add route** starts a second run.

3 Choose the driver and van, then dispatch

Pick the driver in **Choose driver…** and the vehicle in **Choose van…**. **Dispatch** becomes available once a driver, van and parcels are set — click it to send the run to the driver's app.

4 Follow up in Dispatched

The **Dispatched** tab holds each run's delivery note. From there you can change the driver, print the pre-delivery or delivery note, and email the pre-delivery note or proof of delivery to the client.
