Track and update visa applications

7 steps · about 4 min

Find an application, change its status, attach the issued visa and send it to the vessel.

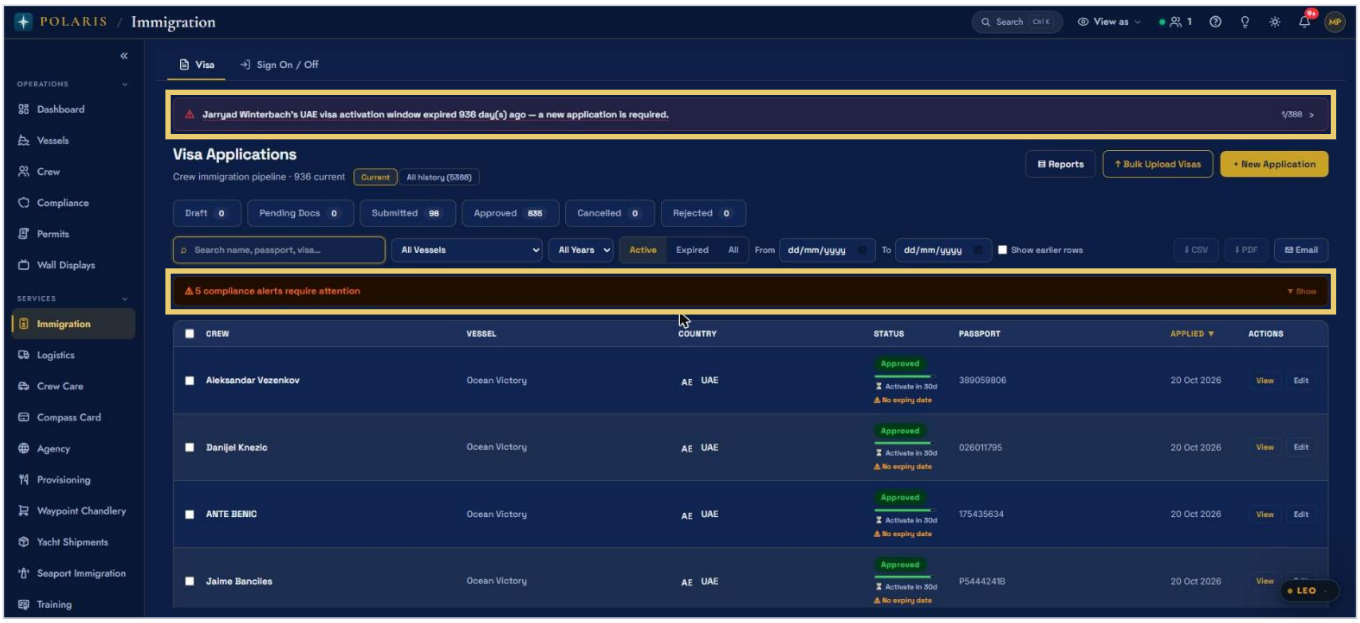

1 Filter the list

On **Immigration -> Visa**, click a status chip (**Draft**, **Pending Docs**, **Submitted**, **Approved**, …) to filter, and narrow further with the search box, **All Vessels**, **All Years**, **Active / Expired / All** and the **From / To** dates. **Current** shows open applications; **All history** shows every one.

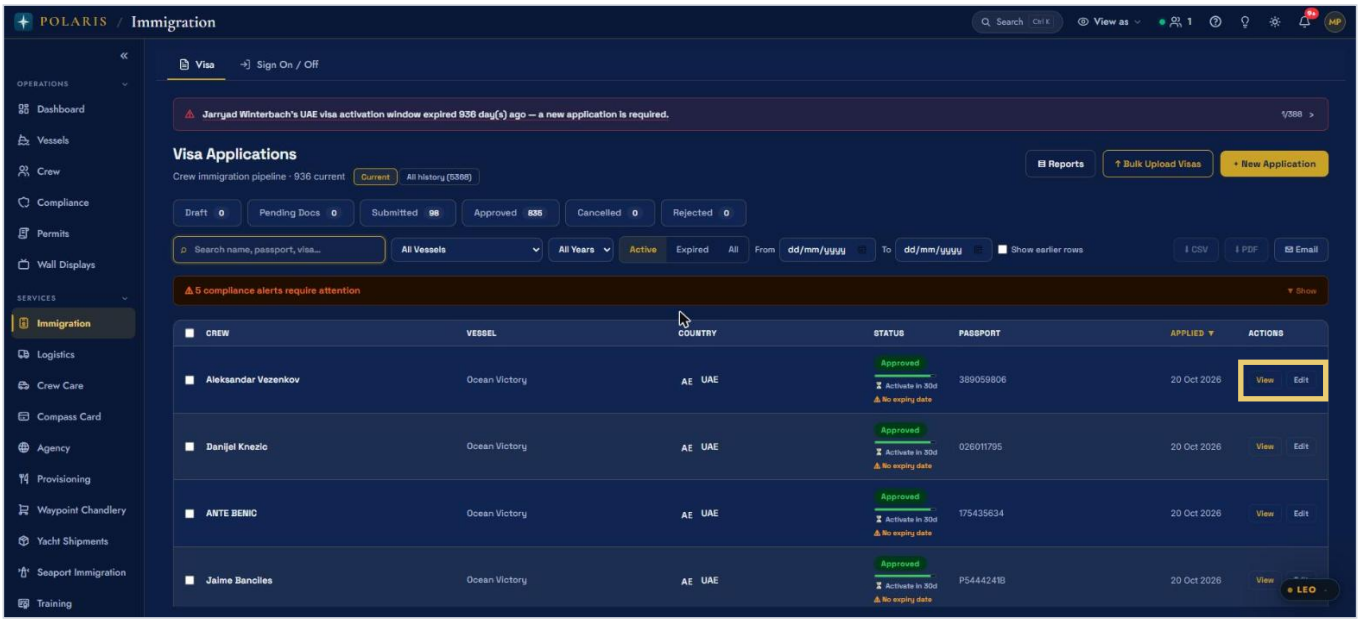

2 Check the compliance alerts

The red banner at the top and **N compliance alerts require attention** list crew whose visa has expired or whose activation window has passed. Click **Show** to see them.

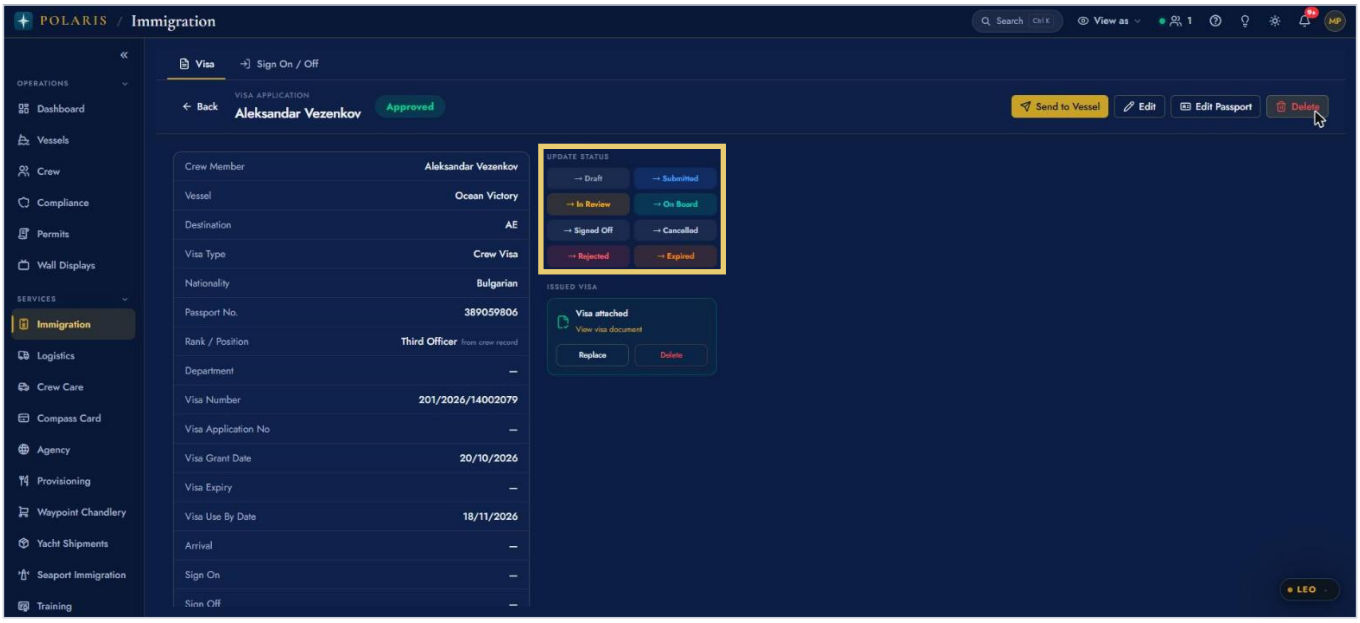

3 Open an application

Click **View** on a row (or the row itself). **Edit** opens the application's details for correction; drafts show **Resume** instead.

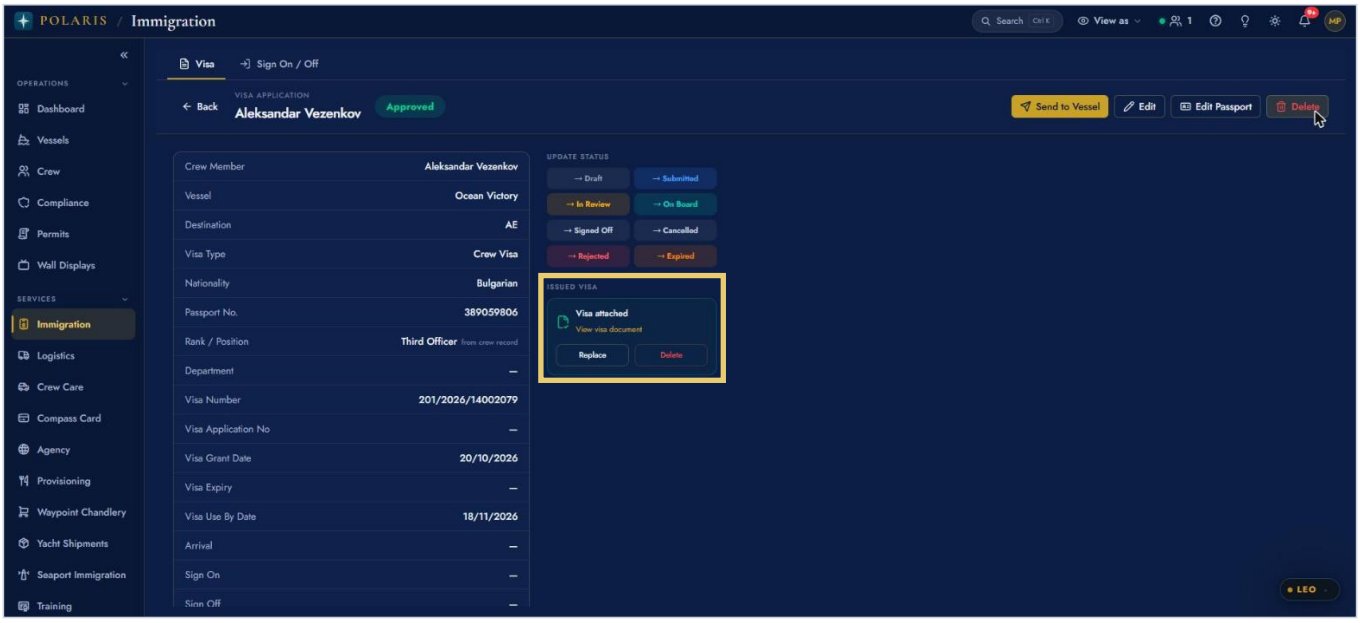

4 Change the status

Under **Update Status**, click the new status — **-> Submitted**, **-> In Review**, **-> On Board**, **-> Signed Off**, **-> Cancelled**, … and confirm. Cancelling asks for the cancellation date. Every change is kept in **Status History**.

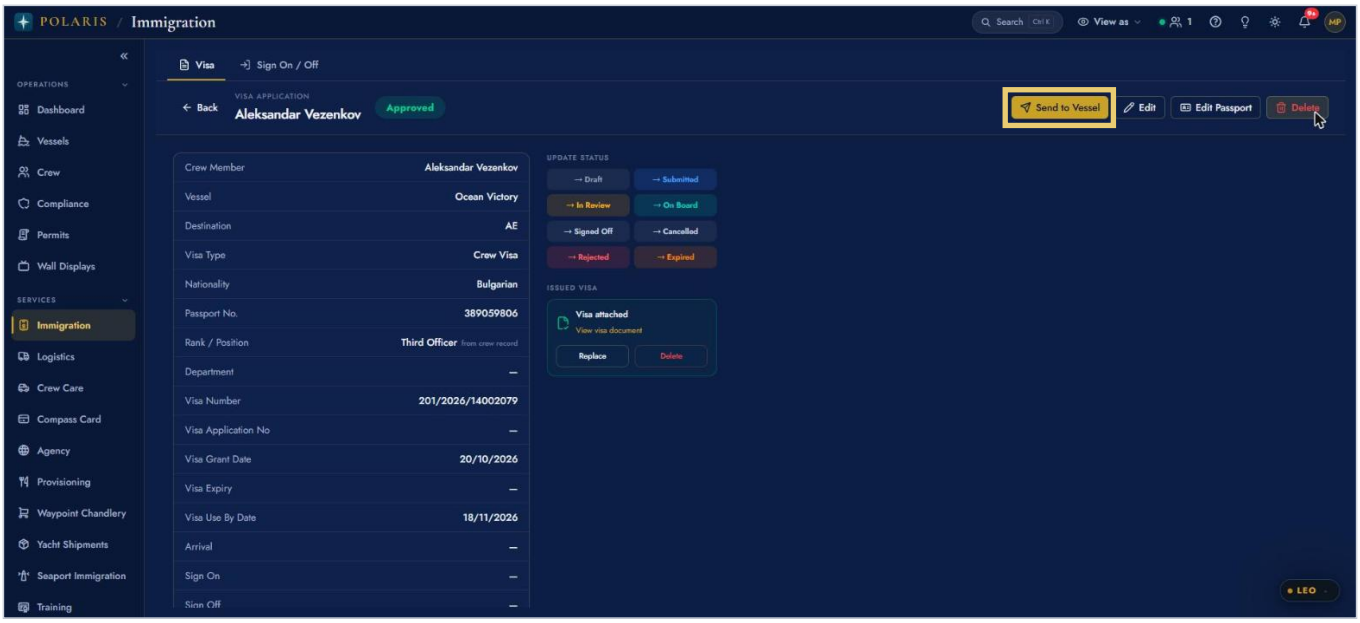

5 Attach the issued visa

When the visa is granted, drag the PDF onto **Issued Visa** (or click it). Polaris files it, checks the name matches and marks the application **Approved**. Use **Replace** if you attached the wrong file.

6 Send it to the vessel

Click **Send to Vessel**, enter the captain's email and send — the vessel receives the visa straight away. **Edit Passport** corrects the passport used on this application.

7 Reports and bulk updates

Reports opens the visa reports. Choose a vessel to enable **CSV** and **PDF** exports. Tick several rows to cancel visas or set arrival, sign-on or sign-off dates for all of them at once.
