POLARIS · HOW-TO GUIDE · OPERATIONS

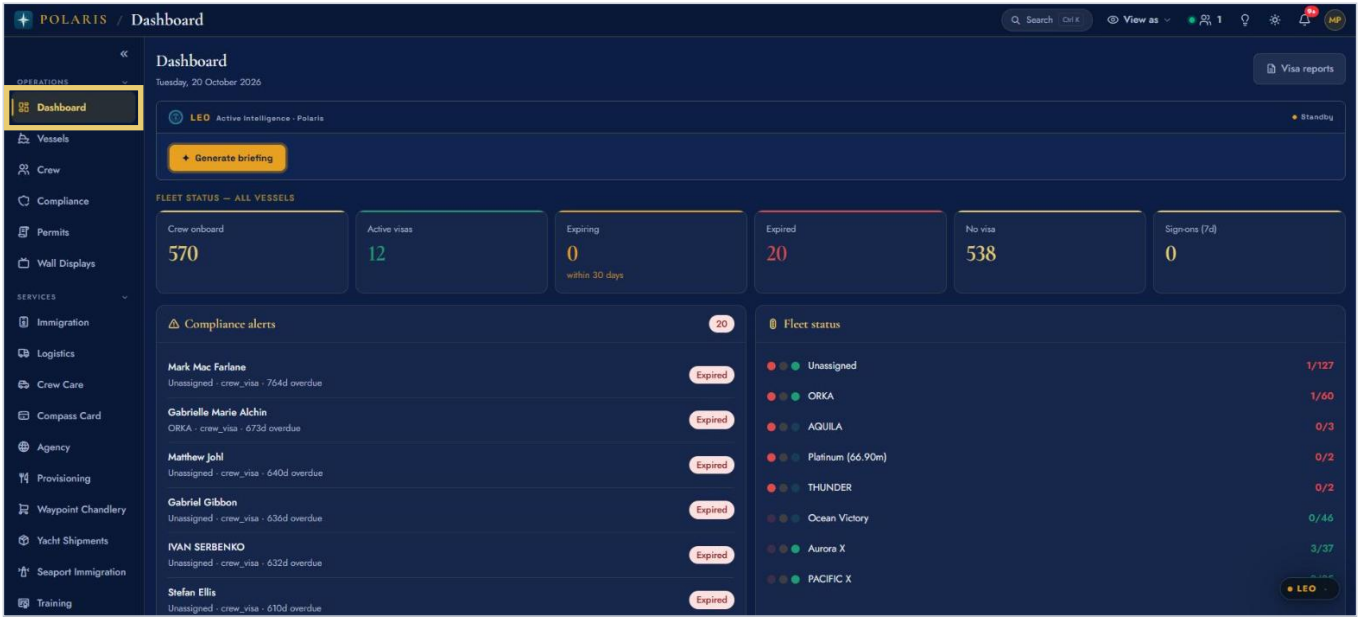

Use the Dashboard

5 steps · about 3 min

Read the fleet picture at a glance, get Leo's briefing and jump to the alerts that need you.

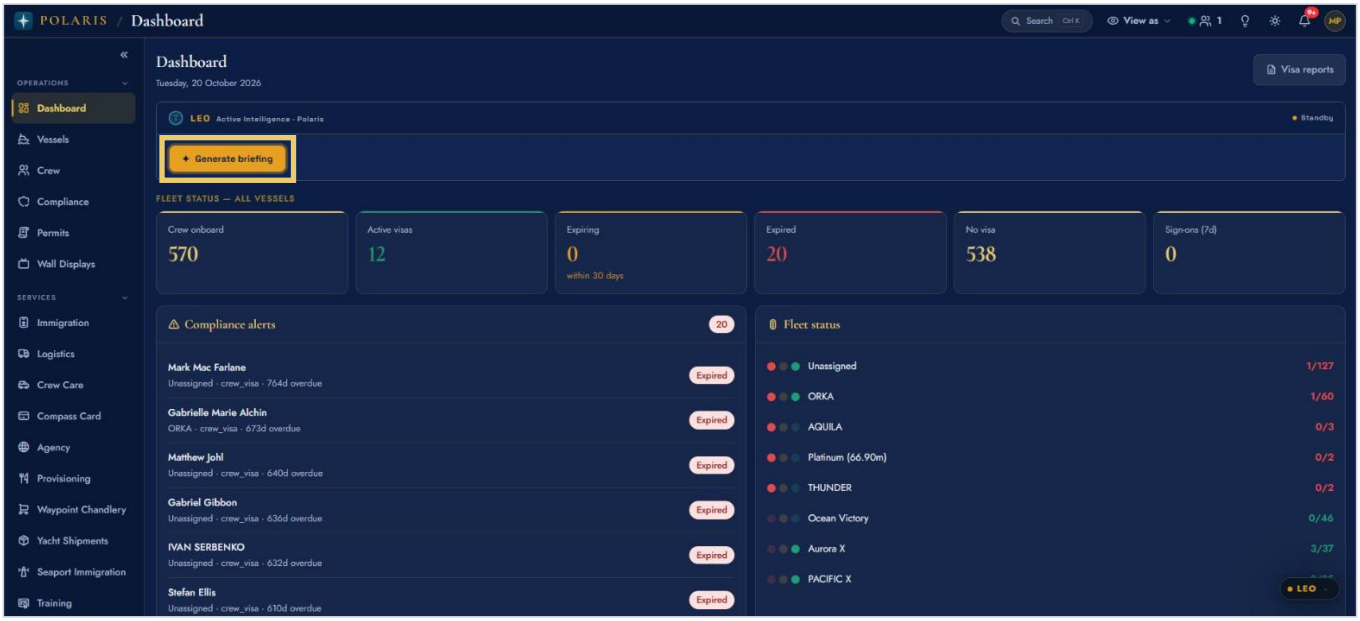

1 Open the Dashboard

Click **Dashboard** at the top of the Operations menu. It is also where Polaris opens after you sign in.

2 Get Leo's briefing

Click **Generate briefing** in the Leo panel. Leo reads your tasks, alerts and fleet data and writes a short briefing, followed by three insight cards: Lean Signal, Ops Health and Attention.

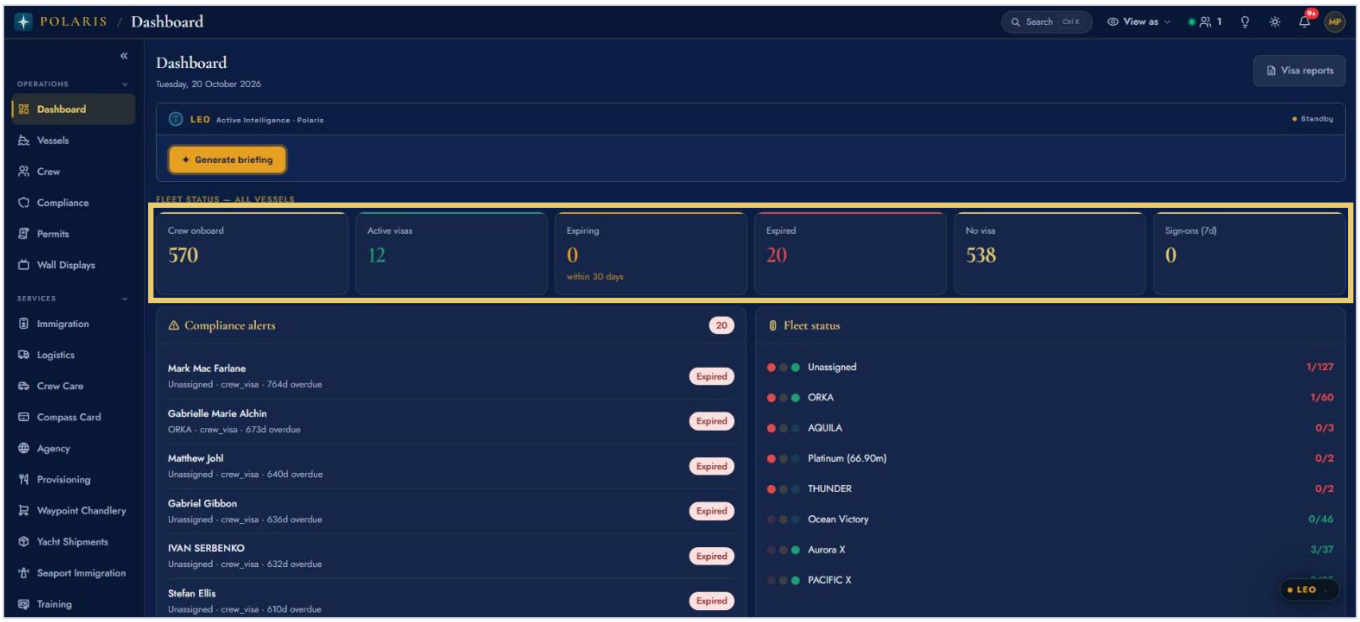

> **Tip:** The briefing is only generated when you ask for it, so opening the Dashboard stays fast.

3 Read the fleet status cards

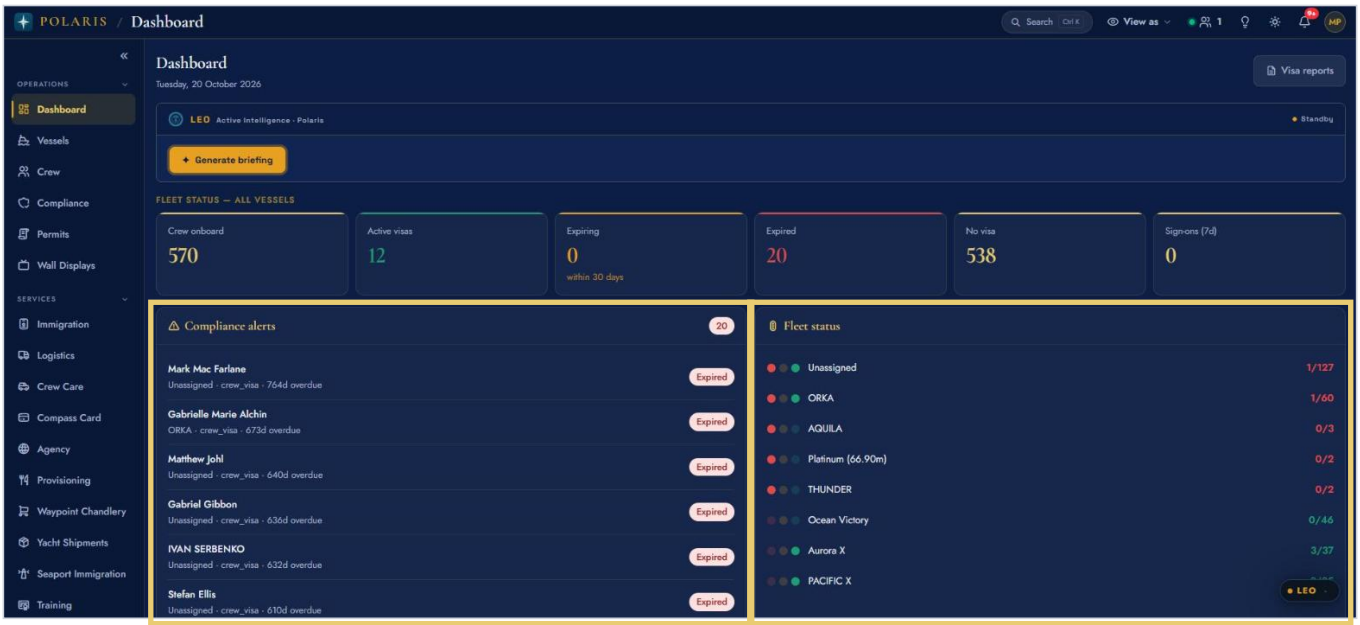

The row of cards under **Fleet status — All vessels** counts crew across every vessel:

- **Crew onboard** — crew currently assigned to a vessel.
- **Active visas** — crew holding a valid visa.
- **Expiring** — visas that run out within 30 days.
- **Expired** — visas already past their expiry date.
- **No visa** — crew with no visa on record.

4 Act on compliance alerts

Compliance alerts lists the most urgent expired or expiring visas, with the vessel, visa type and how many days overdue. **Fleet status** on the right shows a traffic light per vessel — red means at least one crew member's visa has expired. Click a vessel to open its visa report.

5 Open the visa reports

Click **Visa reports** (top right) to see the full visa picture for one vessel or the whole fleet, and to export or send it.
