Store items in the warehouse

4 steps · about 3 min

Check warehouse capacity and register client or internal items into storage.

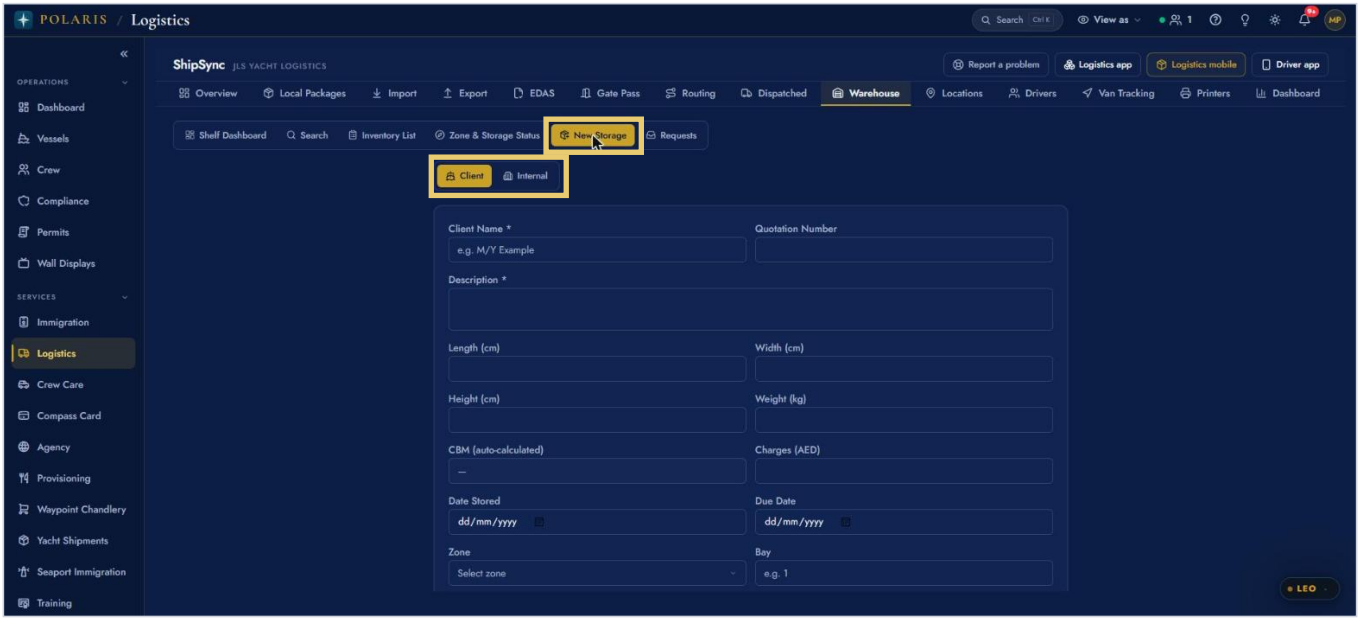

1 Open the Warehouse

In **Logistics**, click **Warehouse**. **Shelf Dashboard** shows total, occupied and available space, how full each zone is, and who is using the storage.

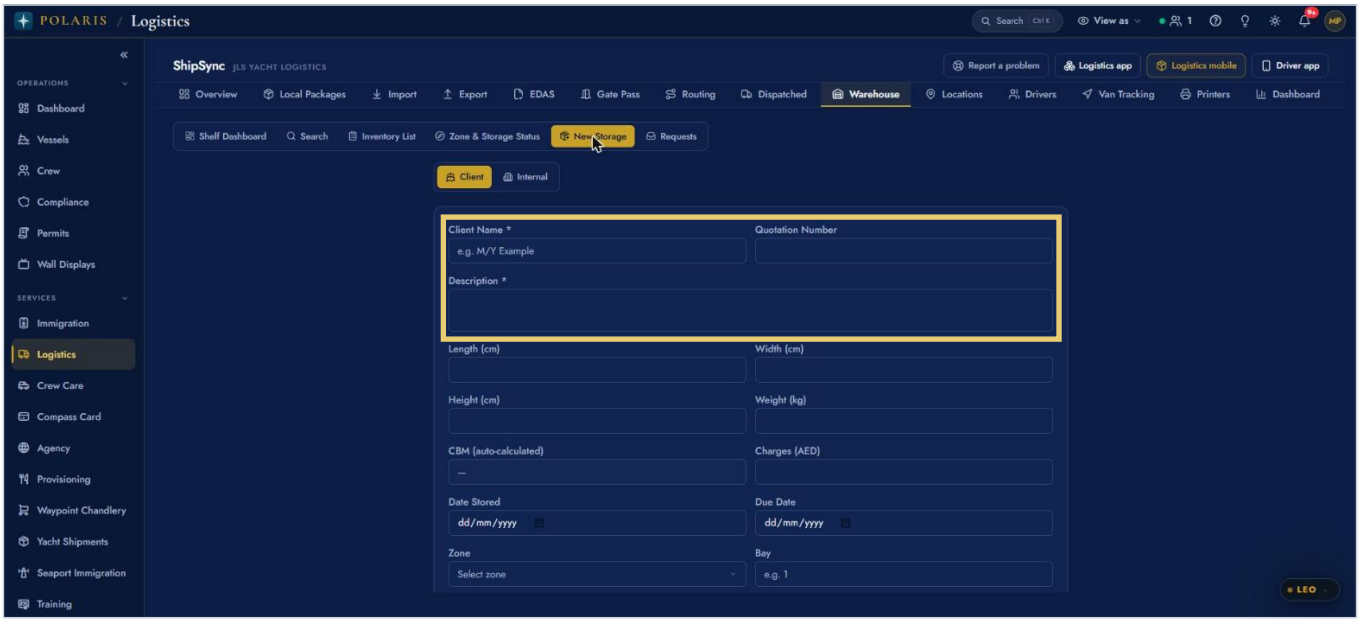

2 Register new storage

Click **New Storage** and choose **Client** (a yacht's items) or **Internal** (a JLS department's documents or assets).

3 Fill in the item

For a client, **Client Name** and **Description** are required. Add the dimensions and weight (the CBM is worked out for you), the charges, date stored and due date, and the **Zone**, **Bay** and **Shelf** it's going on. Attach the packing list, then click **Register storage**.

4 Find and request items

Search and **Inventory List** find what's stored where; **Zone & Storage Status** shows each zone. **Requests** is where the team raise incoming, picking and dispatch requests for the warehouse.
