POLARIS

Operations How-to Guides

14 guides · step by step, with screenshots

Contents

1. Use the Dashboard
Read the fleet picture at a glance, get Leo's briefing and jump to the alerts that need you.

2. Find and filter vessels
Search the Yacht Registry, filter by status, switch layouts and export the list.

3. Add a new yacht
Create a yacht in the registry, with its details, image and responsible agent.

4. Edit a yacht
Update a yacht's details, assign agents, and archive or restore it.

5. Vessel documents & permits
Upload and share a yacht's documents, and see every permit it holds.

6. Find a crew member
Search and filter the Crew List and open a crew profile.

7. Add a crew member
Create a crew record by hand or import a list from a CSV file.

8. Edit a crew member
Update a crew member's vessel, rank, passport and personal details, or remove them.

9. Check visa compliance
See which crew hold a valid visa, who is at risk and who is in breach — fleet-wide or per vessel.

10. Track permits in the Command Centre
See every permit across the fleet and catch the ones that are expired or about to expire.

11. Add a new permit
Record a gate pass, navigation licence or any other permit and email it to the yacht.

12. Edit or renew a permit
Correct a permit, update its dates when it is renewed, resend it or delete it.

13. File permits from the Permit Inbox
Check permits that arrive by email, file them to the vessel and send them to the yacht.

14. Pair an office TV (Wall Displays)
Put the Port Operations board on an office screen and choose what it shows.

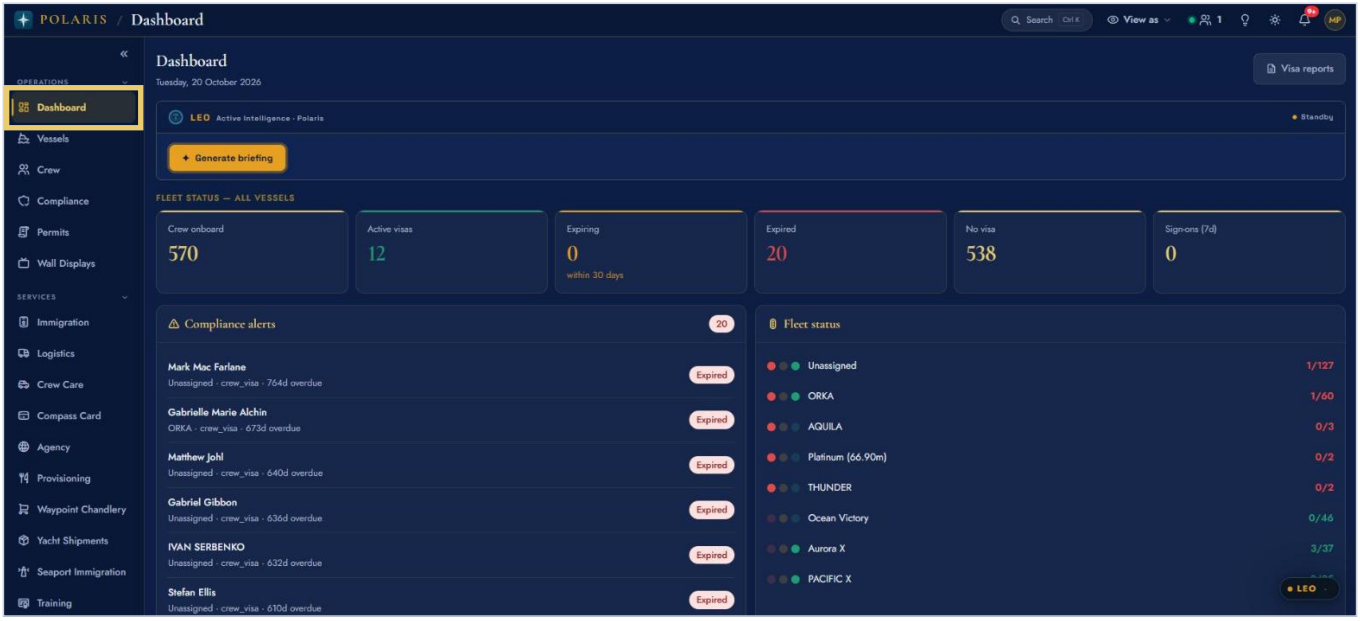

Use the Dashboard

5 steps · about 3 min

Read the fleet picture at a glance, get Leo's briefing and jump to the alerts that need you.

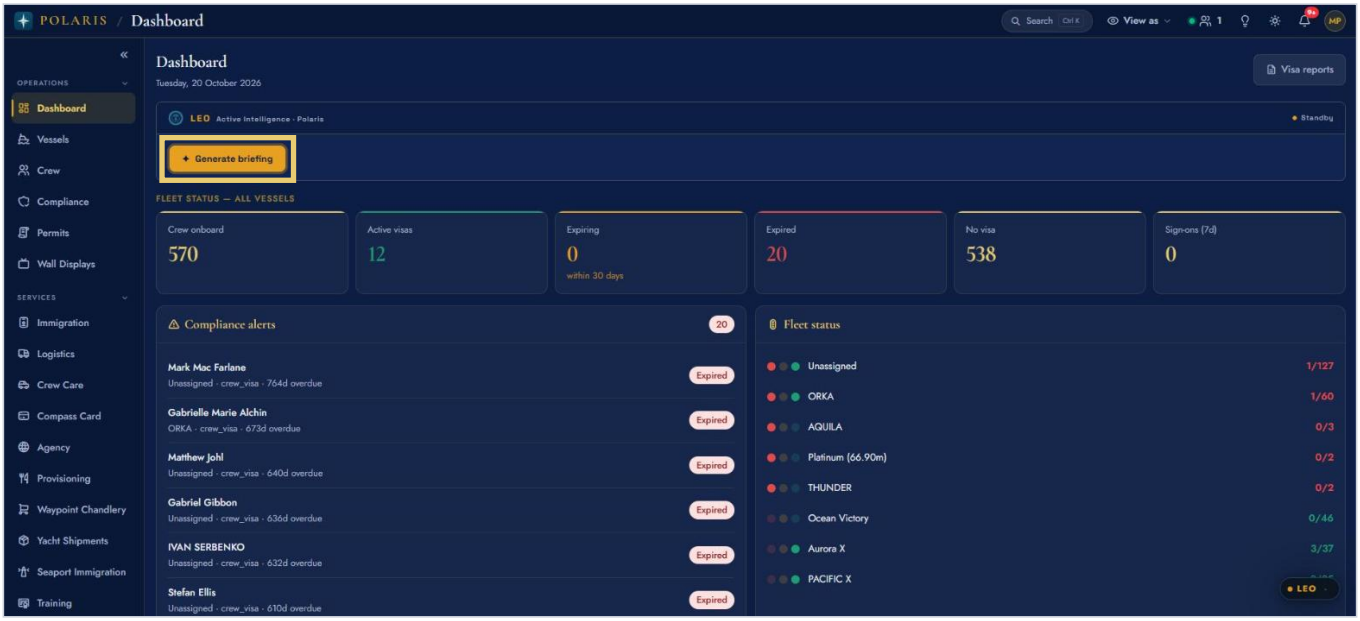

1 Open the Dashboard

Click **Dashboard** at the top of the Operations menu. It is also where Polaris opens after you sign in.

2 Get Leo's briefing

Click **Generate briefing** in the Leo panel. Leo reads your tasks, alerts and fleet data and writes a short briefing, followed by three insight cards: Lean Signal, Ops Health and Attention.

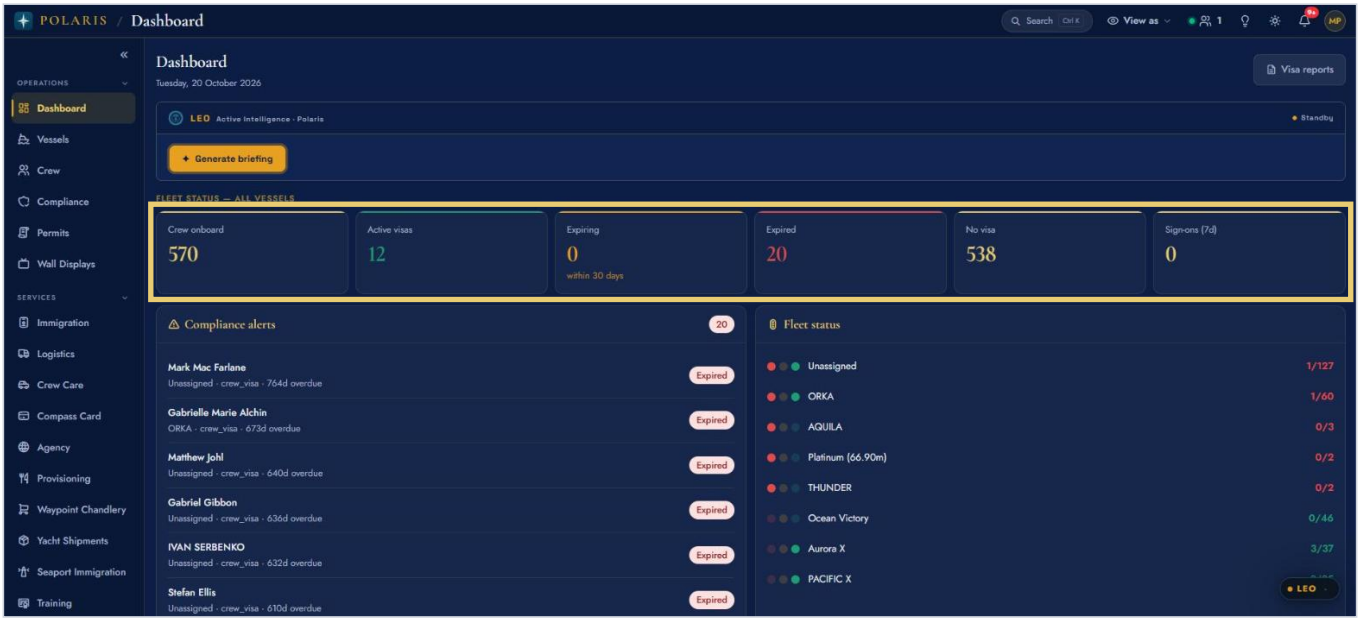

> **Tip:** The briefing is only generated when you ask for it, so opening the Dashboard stays fast.

3 Read the fleet status cards

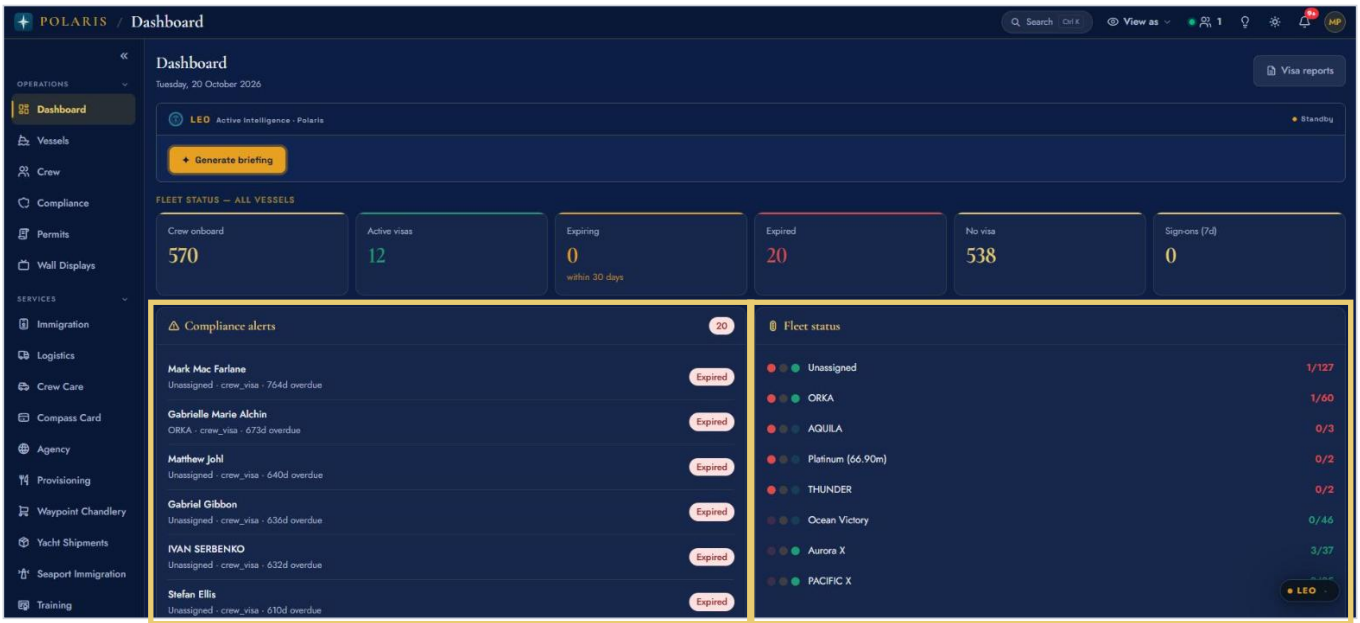

The row of cards under **Fleet status — All vessels** counts crew across every vessel:

- **Crew onboard** — crew currently assigned to a vessel.
- **Active visas** — crew holding a valid visa.
- **Expiring** — visas that run out within 30 days.
- **Expired** — visas already past their expiry date.
- **No visa** — crew with no visa on record.

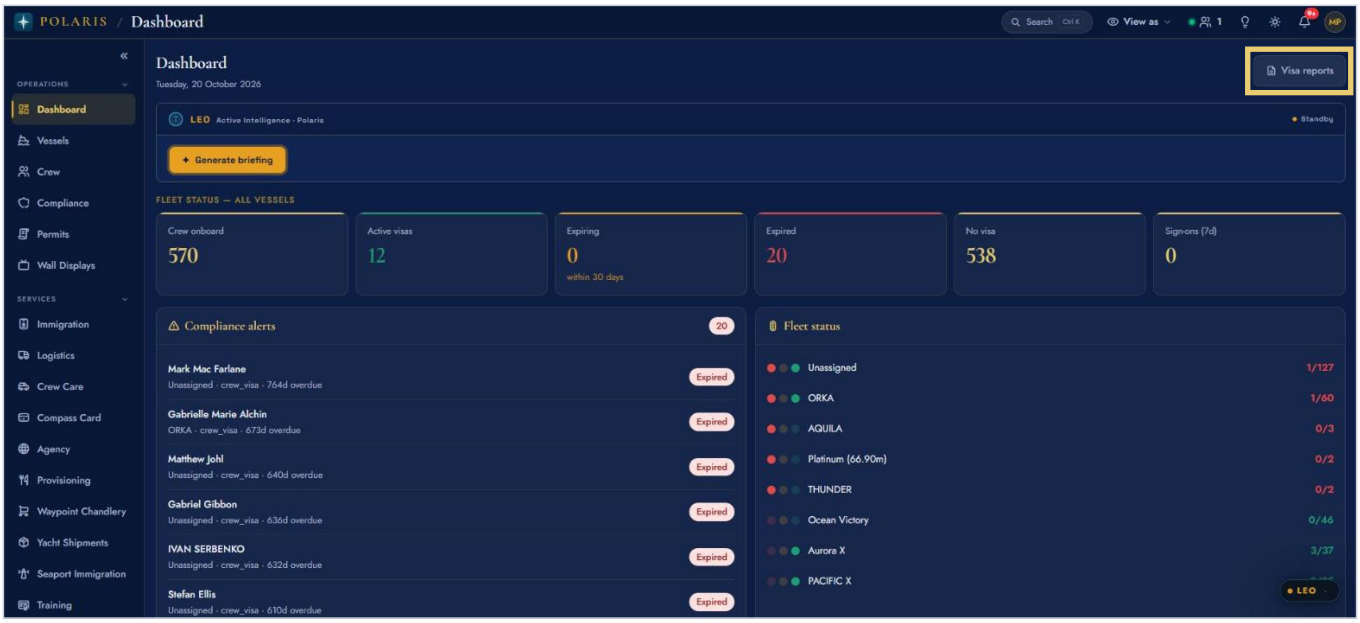

4 Act on compliance alerts

Compliance alerts lists the most urgent expired or expiring visas, with the vessel, visa type and how many days overdue. **Fleet status** on the right shows a traffic light per vessel — red means at least one crew member's visa has expired. Click a vessel to open its visa report.

5 Open the visa reports

Click **Visa reports** (top right) to see the full visa picture for one vessel or the whole fleet, and to export or send it.

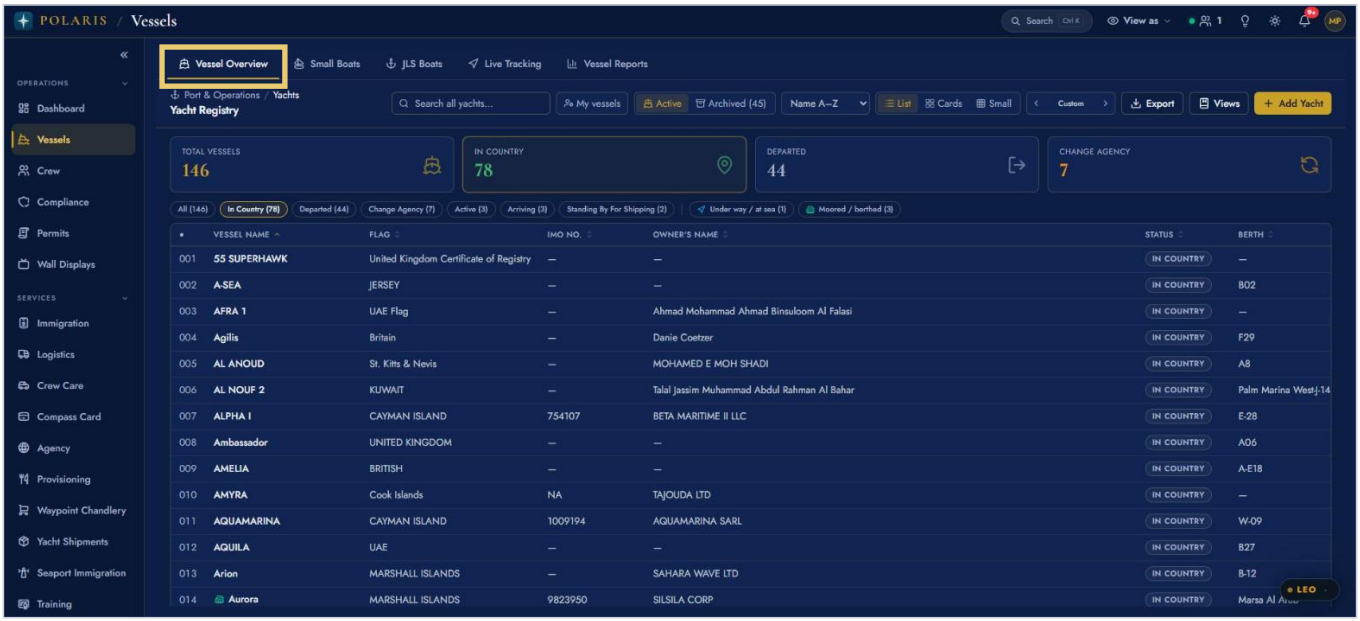

Find and filter vessels

6 steps · about 3 min

Search the Yacht Registry, filter by status, switch layouts and export the list.

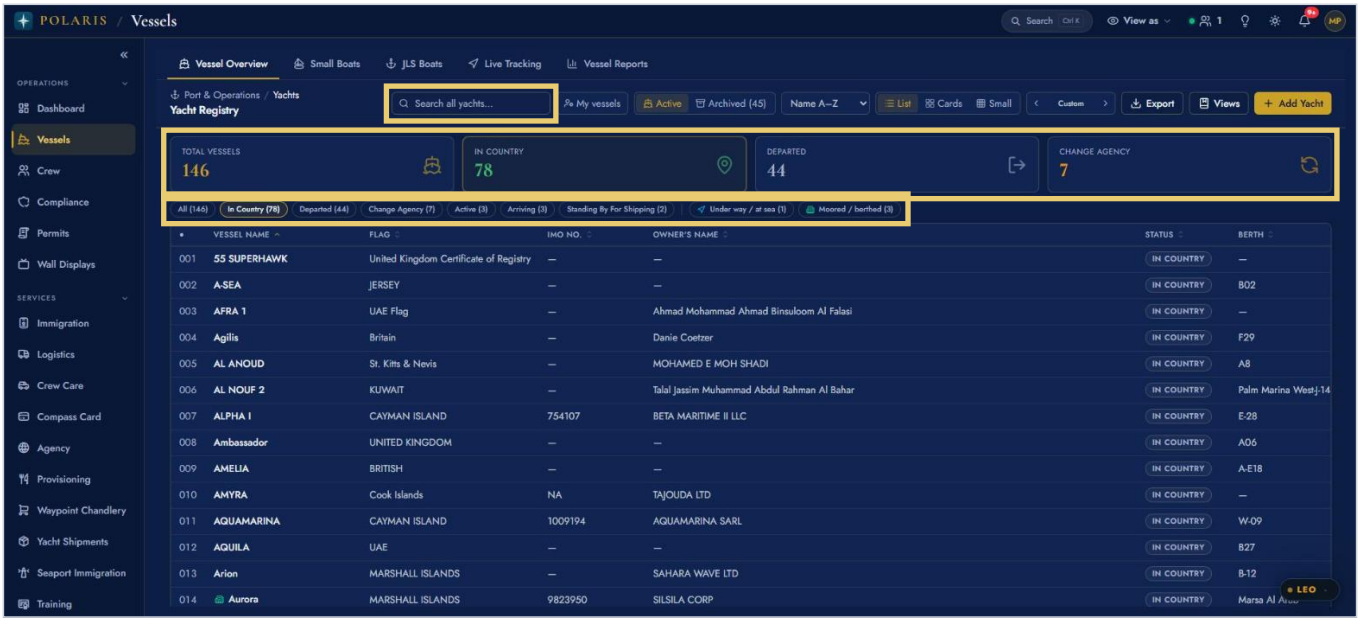

1 Open the Yacht Registry

Click **Vessels** in the Operations menu. The **Vessel Overview** tab shows the Yacht Registry: every active yacht with its flag, IMO number, owner, status and berth.

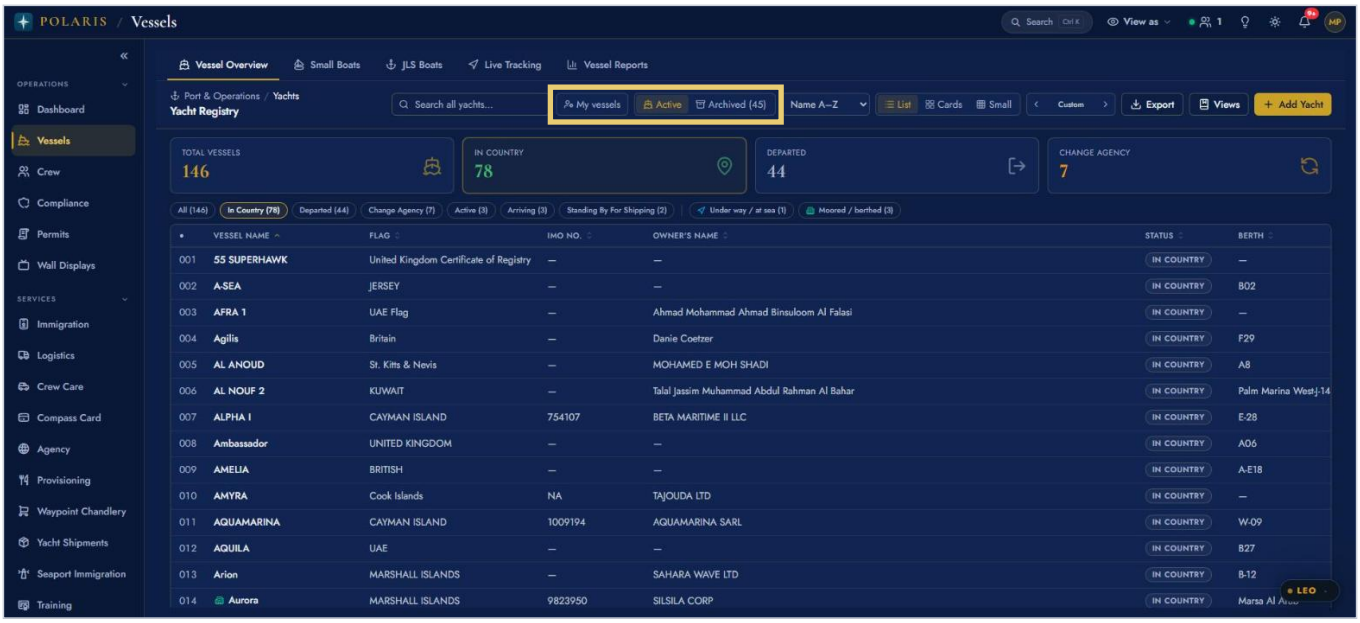

2 Search and filter

Type a name in **Search all yachts…**. Click a stat card (**Total Vessels**, **In Country**, **Departed**, **Change Agency**) or a status chip under it to narrow the list. The live AIS chips (**Under way / at sea**, **Moored / berthed**, …) filter by where the yacht actually is right now.

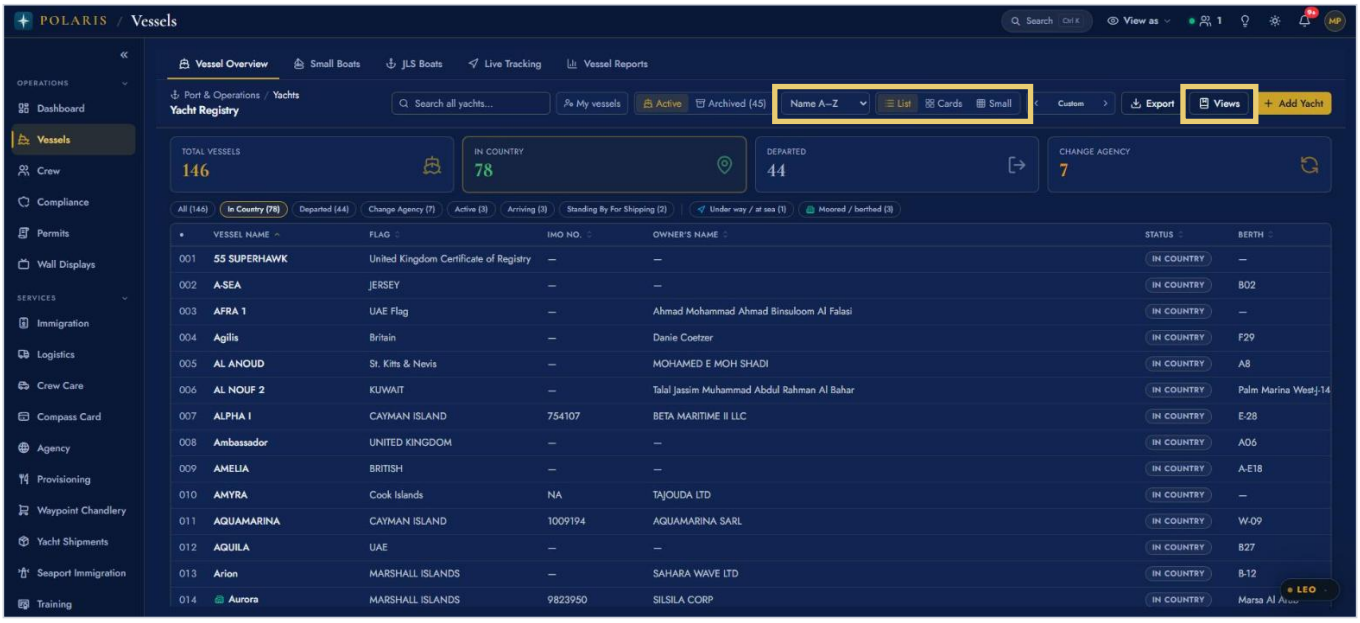

3 Show only your vessels

Click **My vessels** to see only the yachts where you are the responsible agent. Click **Archived** to see yachts that have left the fleet; **Active** brings you back.

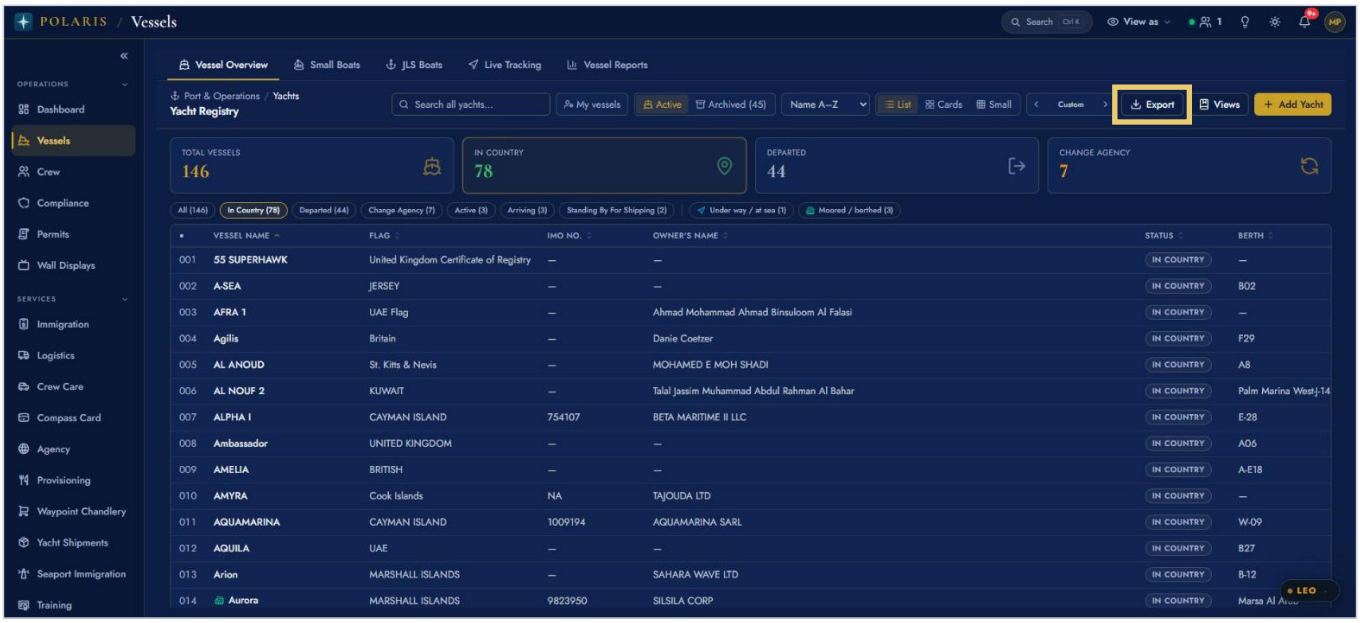

4 Change the layout and columns

Pick a sort order from the dropdown, then choose **List**, **Cards** or **Small**. Under **Views** you can switch between the built-in views (Default, Compact, Operations), tick the columns you want and **Save current as…** your own view. The < > arrows step through your saved views.

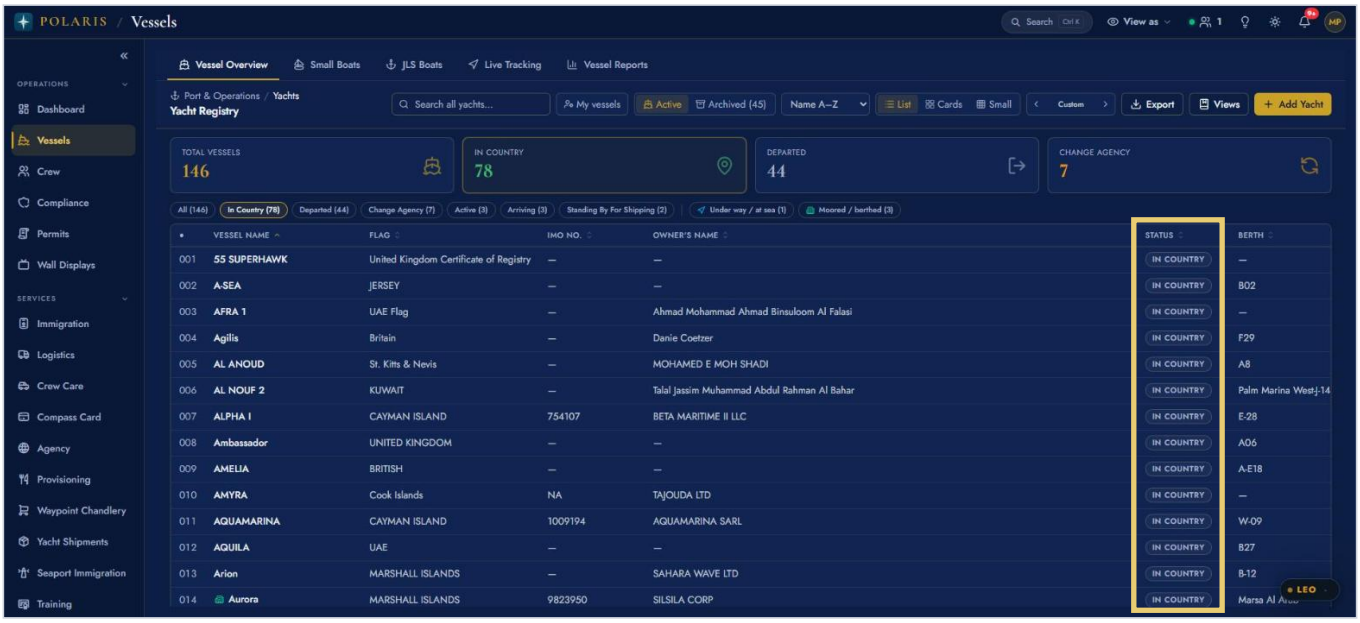

5 Export to Excel

Click **Export**. Choose **Columns on screen** or **All fields**, then export **All yachts & statuses** or the **Current list only** (keeps your filters and sort). The file opens in Excel.

6 Quick changes from the list

In List view you can change a yacht without opening it: click its **Status** pill to pick a new status (In Country, Departed, Change Agency, …) or click the **Agent** cell to assign the responsible agent.

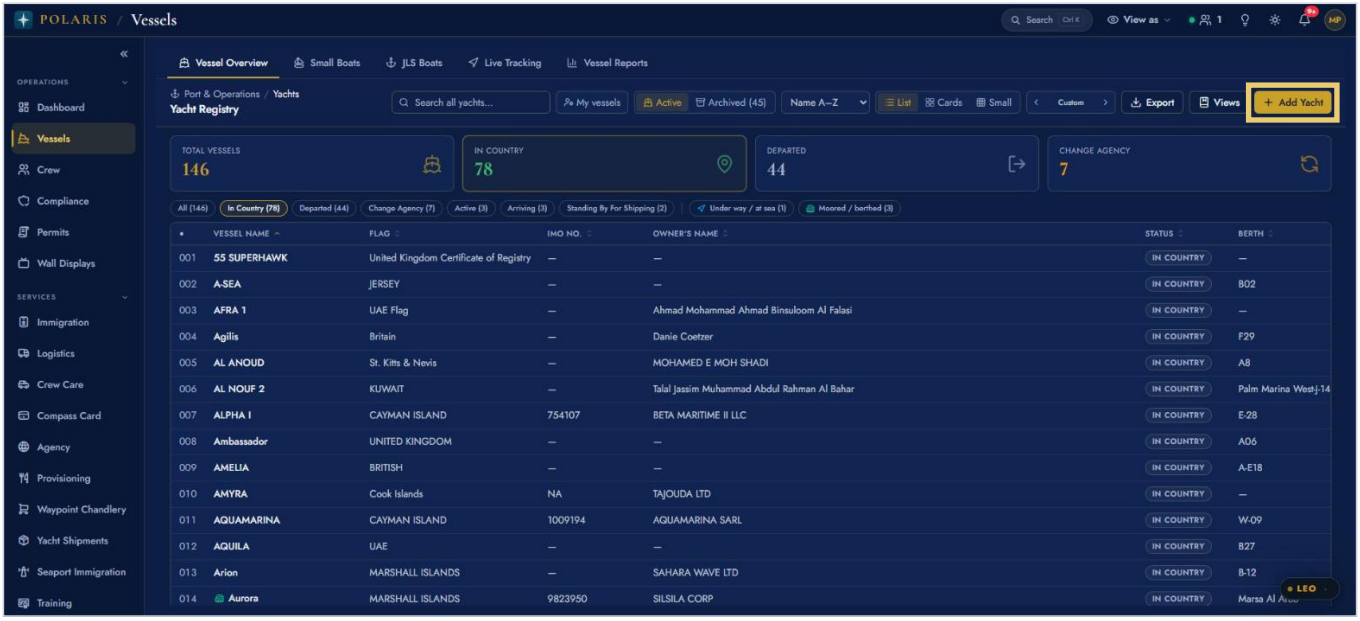

Add a new yacht

5 steps · about 4 min

Create a yacht in the registry, with its details, image and responsible agent.

1 Click Add Yacht

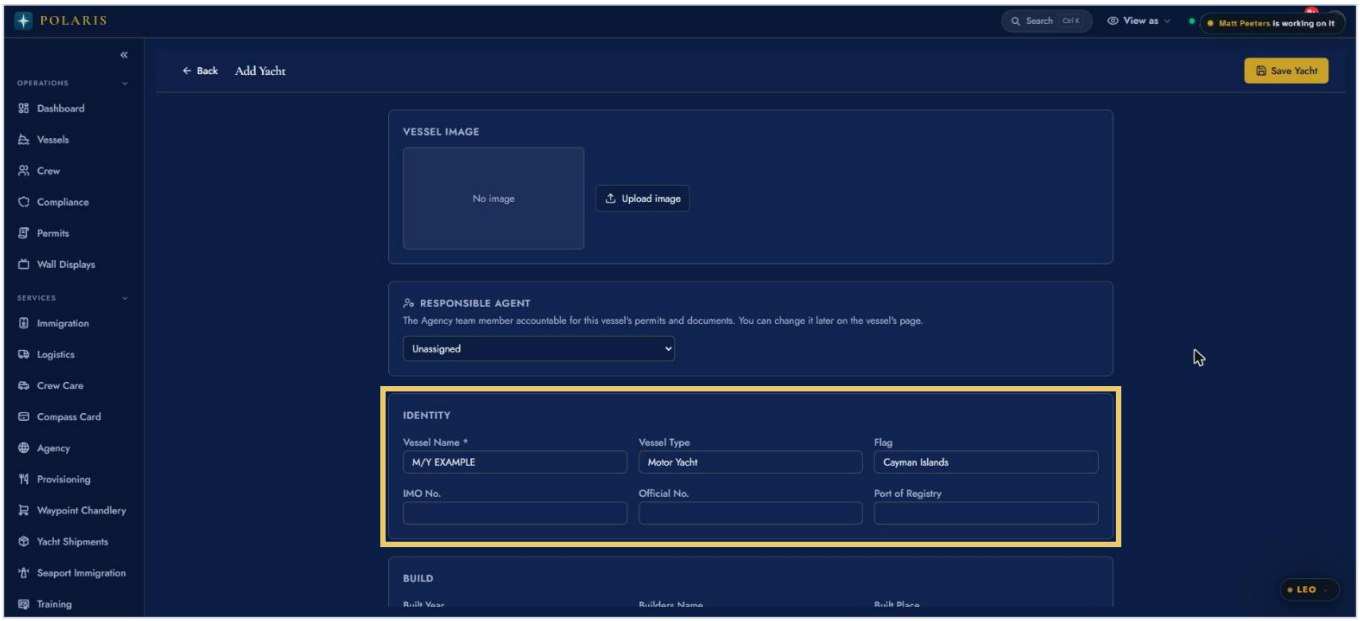

In **Vessels -> Vessel Overview**, click **Add Yacht** at the top right of the Yacht Registry.

> **Tip:** Add Yacht only appears if you have permission to create vessels. Ask an admin if you can't see it.

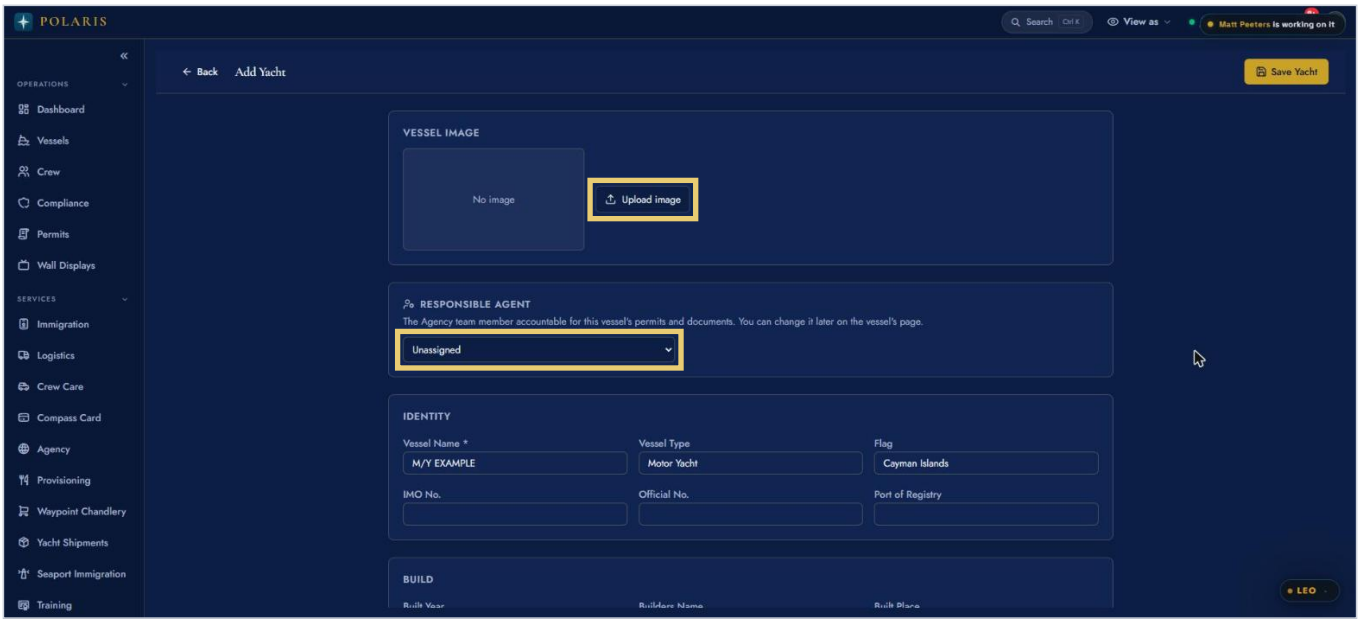

2 Fill in the identity

Only **Vessel Name** is required — everything else can be added later. Fill in what you have: **Vessel Type**, **Flag**, **IMO No.**, **Official No.** and **Port of Registry**.

3 Add an image and responsible agent

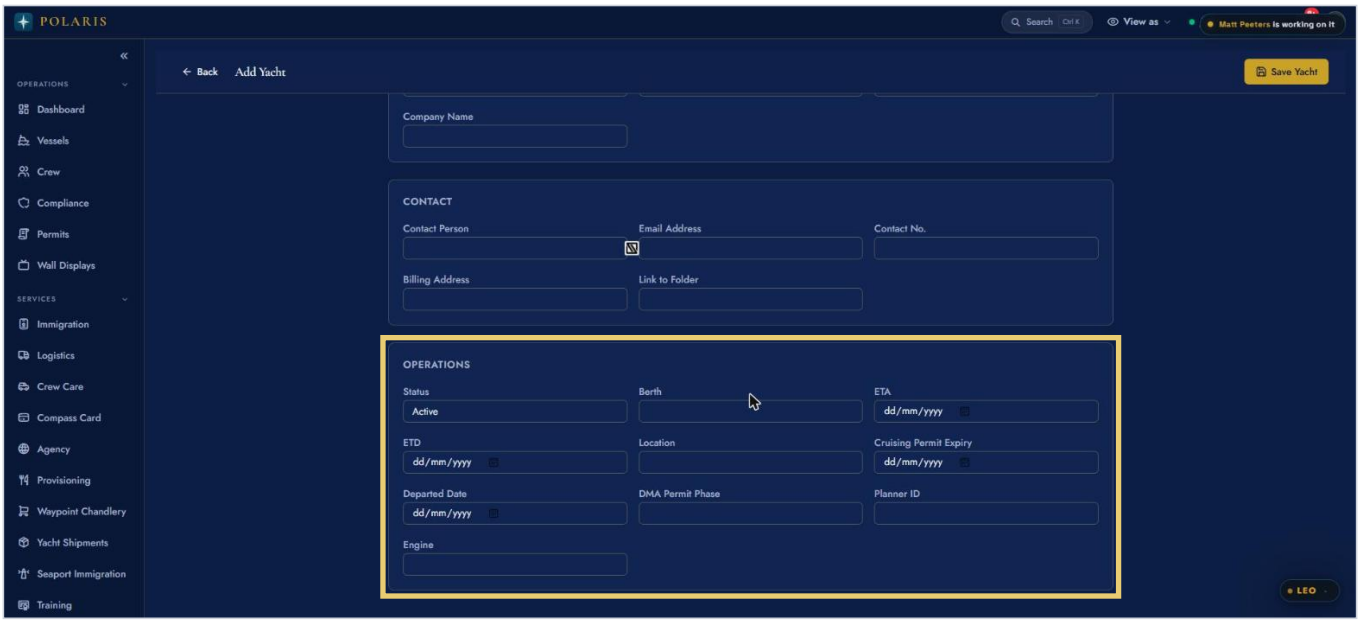

Click **Upload image** to add a photo of the yacht. Under **Responsible Agent**, choose the Agency team member who looks after this vessel's permits and documents — they get the permit expiry reminders.

4 Complete the other sections

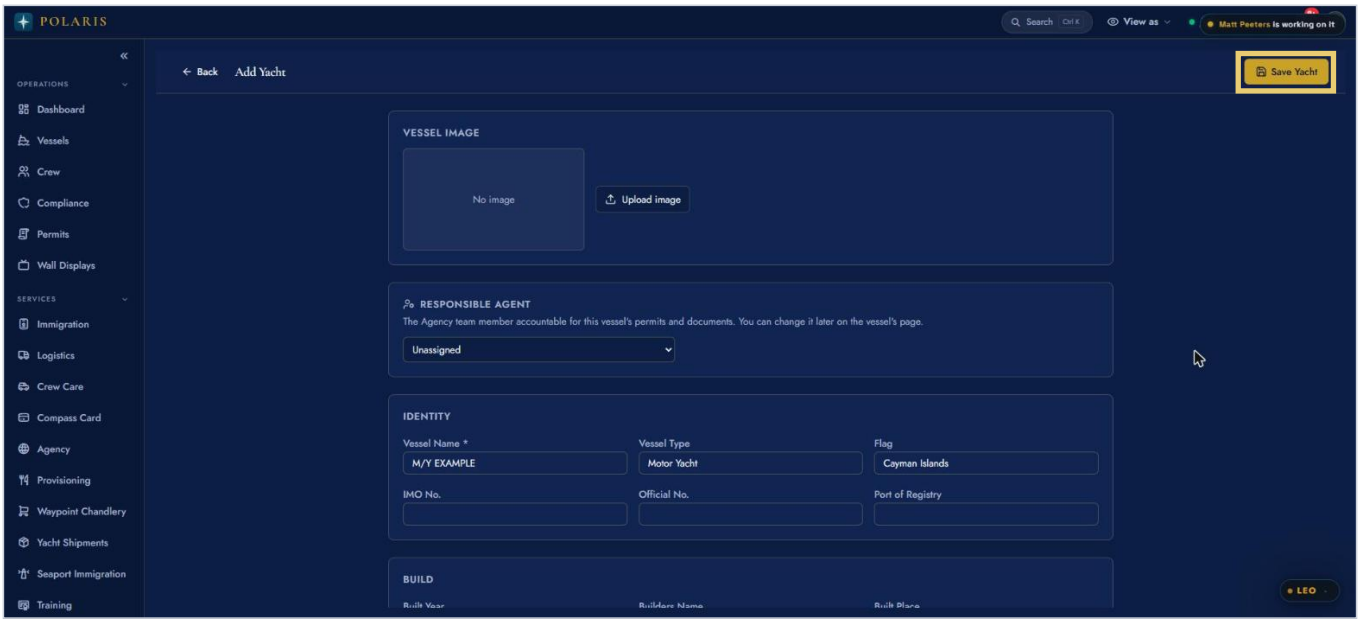

Scroll down for the remaining sections:

- **Build** and **Dimensions** — built year, builder, tonnage, LOA, breadth, draught, air draft.
- **Communications** — radio call sign, MMSI and equipment.
- **Capacity** — max crew and max guests.
- **Owner** and **Contact** — owner, company, contact person, email, billing address and SharePoint folder link.
- **Operations** — status, berth, ETA / ETD, location and cruising permit expiry.

5 Save the yacht

Click **Save Yacht** (top right). Polaris creates the yacht, makes its SharePoint folder automatically and opens the new vessel page.

> **Tip:** Changed your mind? Click Back — nothing is saved until you press Save Yacht.

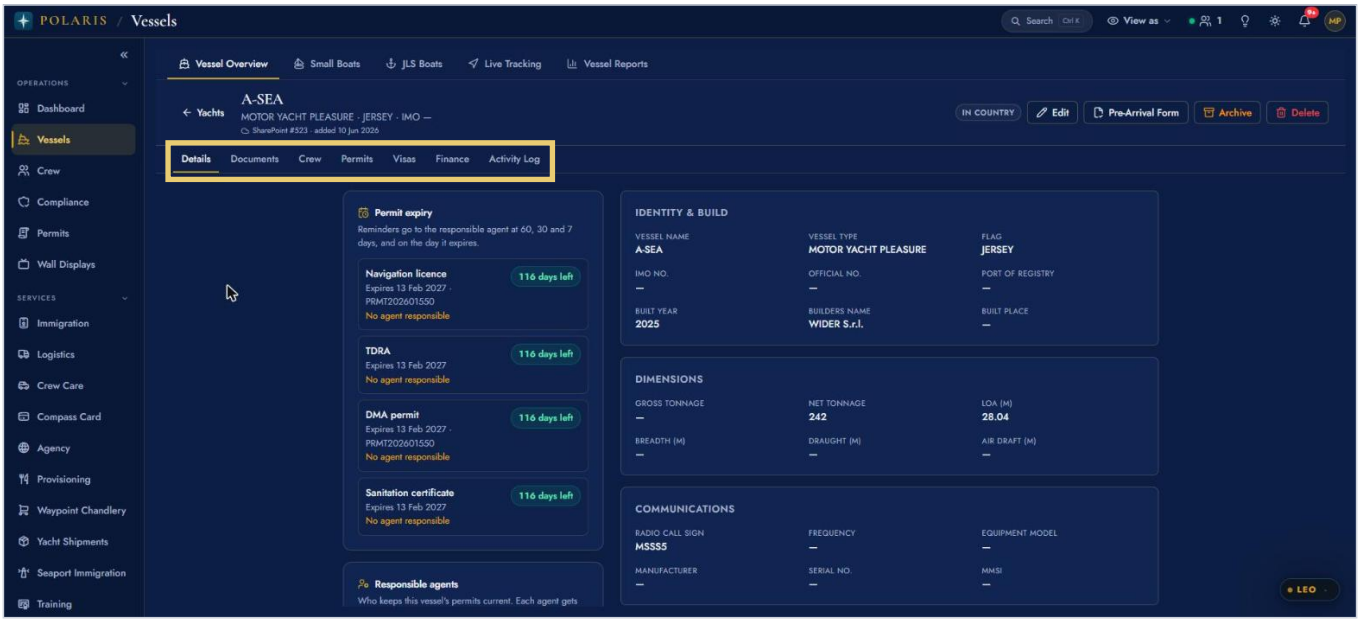

Edit a yacht

5 steps · about 3 min

Update a yacht's details, assign agents, and archive or restore it.

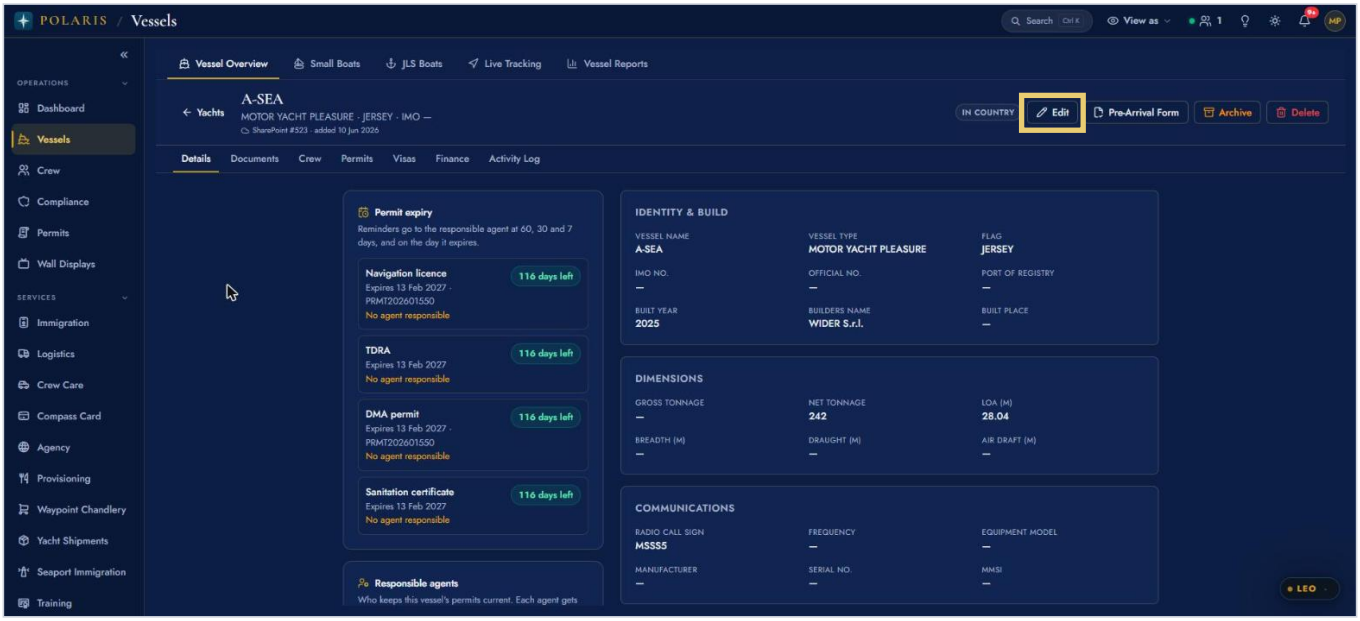

1 Open the yacht

In the Yacht Registry, click the yacht's name. Its page opens with the **Details** tab showing permit expiries on the left and the yacht's information on the right.

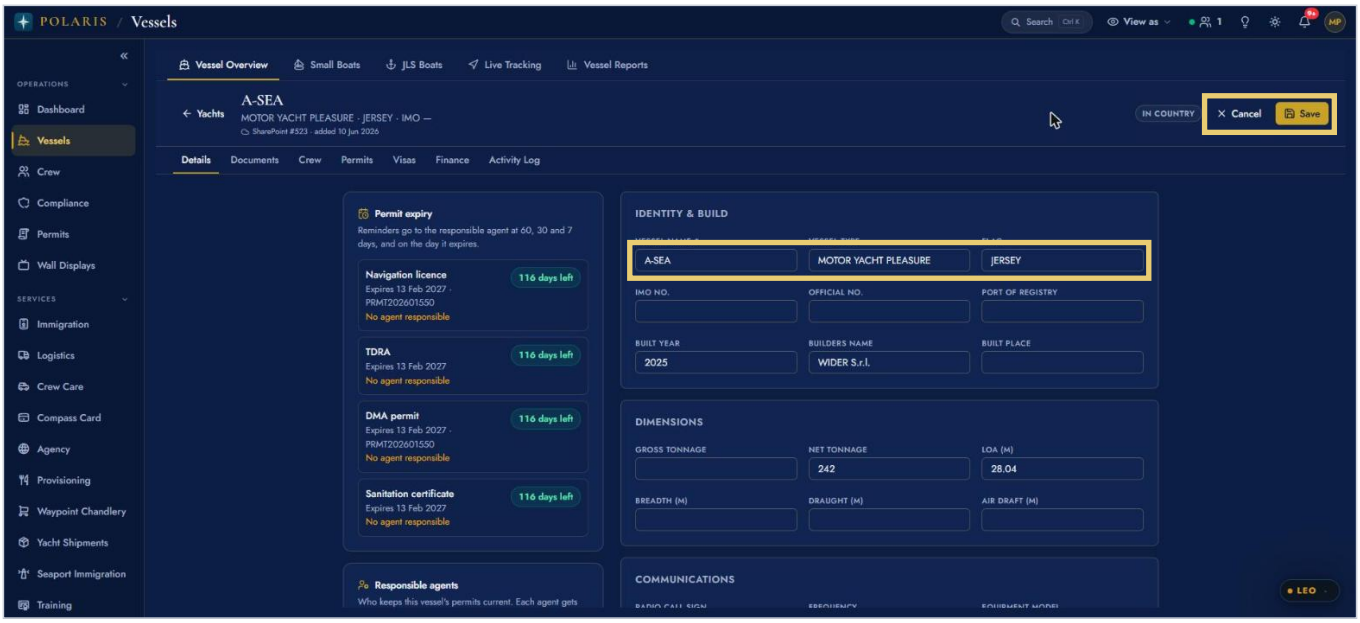

2 Click Edit

Click **Edit** in the header. The information panels turn into editable fields.

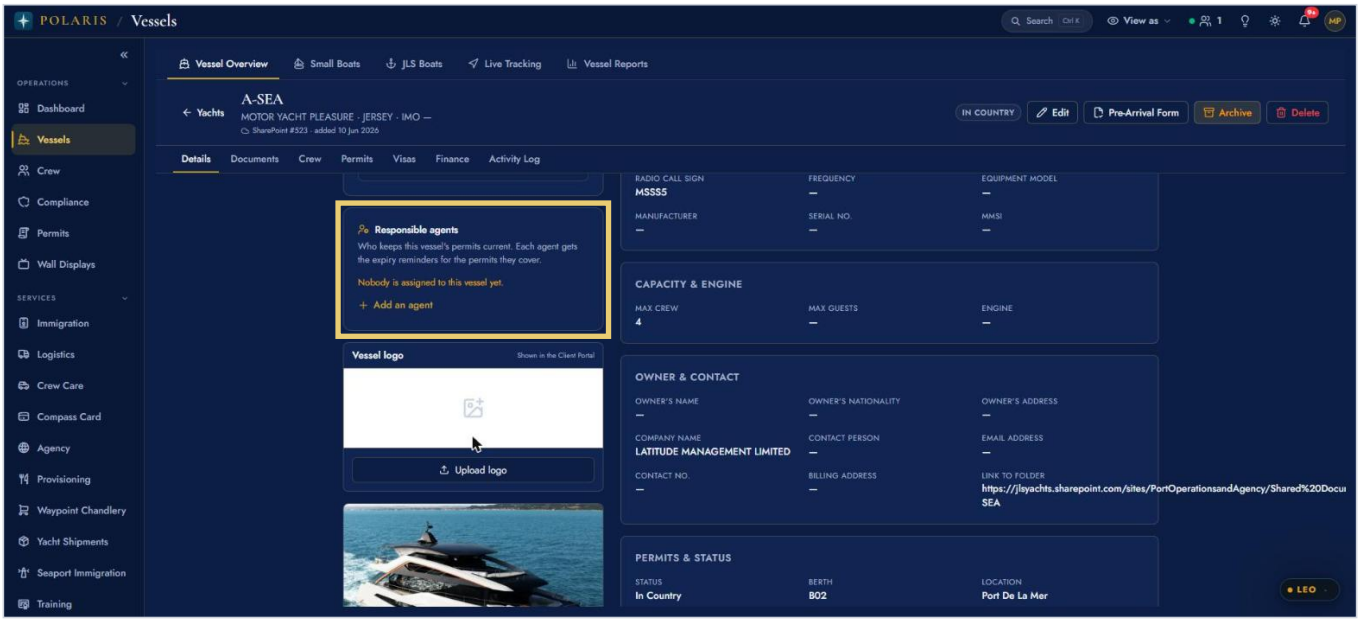

3 Change the details and save

Update any field — only **Vessel name** must stay filled in. Click **Save** to keep your changes, or **Cancel** to throw them away.

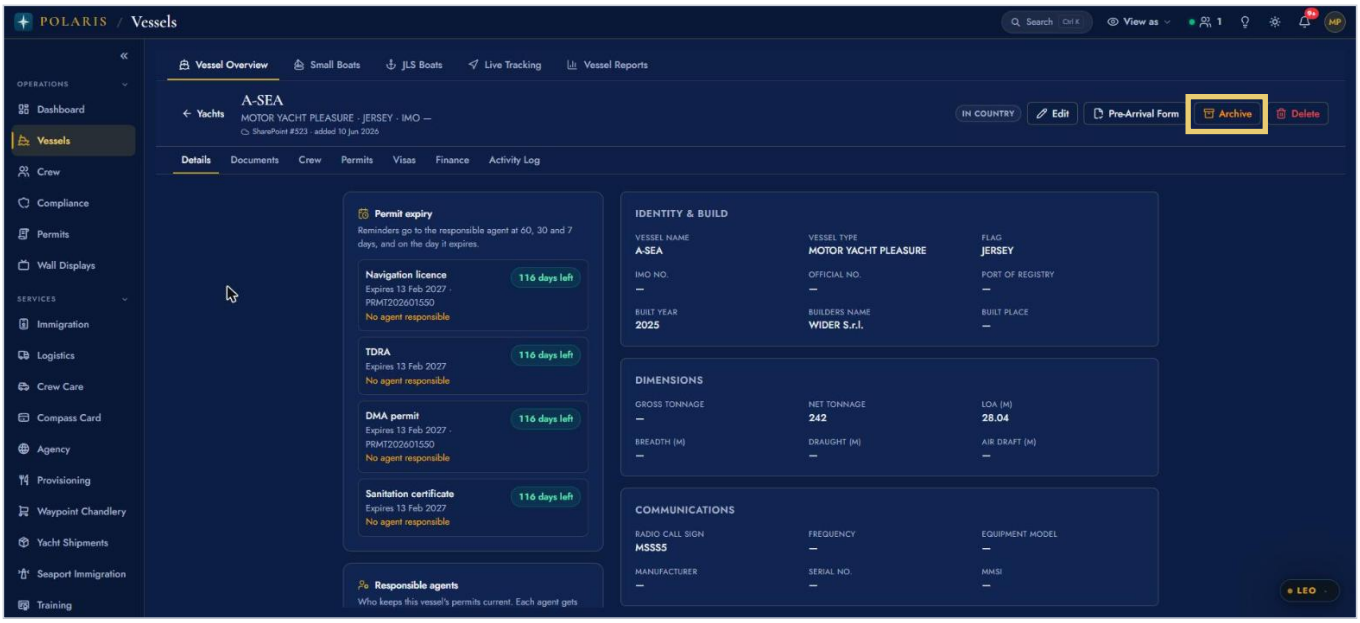

4 Assign the responsible agents

Further down the left column, **Responsible agents** shows who keeps this vessel's permits current. Click **Add an agent** to assign someone — each agent gets reminders 60, 30 and 7 days before their permits expire, and on the day.

5 Archive or restore

When a yacht leaves the fleet, click **Archive** in the header and confirm. It moves to the **Archived** list in the registry, keeping all its history. Open it from there and click **Restore** to bring it back.

> **Tip:** Use Archive rather than Delete for a yacht that has simply left — Delete removes the yacht from Polaris.

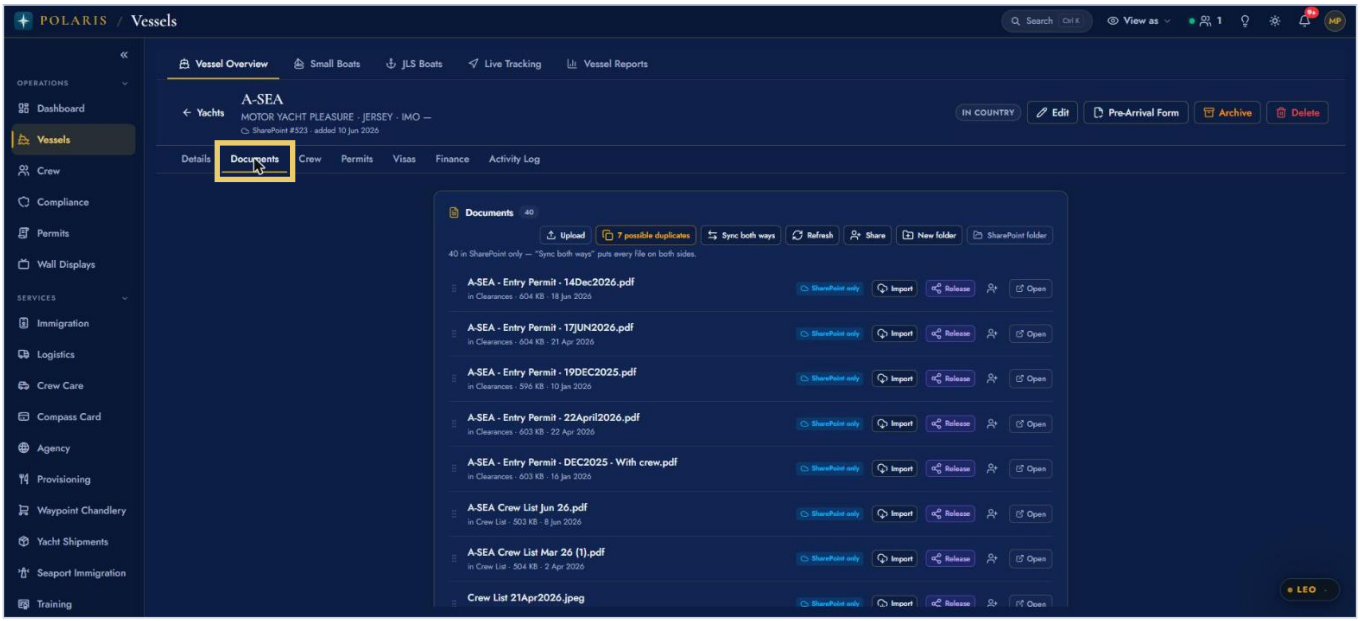

Vessel documents & permits

4 steps · about 3 min

Upload and share a yacht's documents, and see every permit it holds.

1 Open the Documents tab

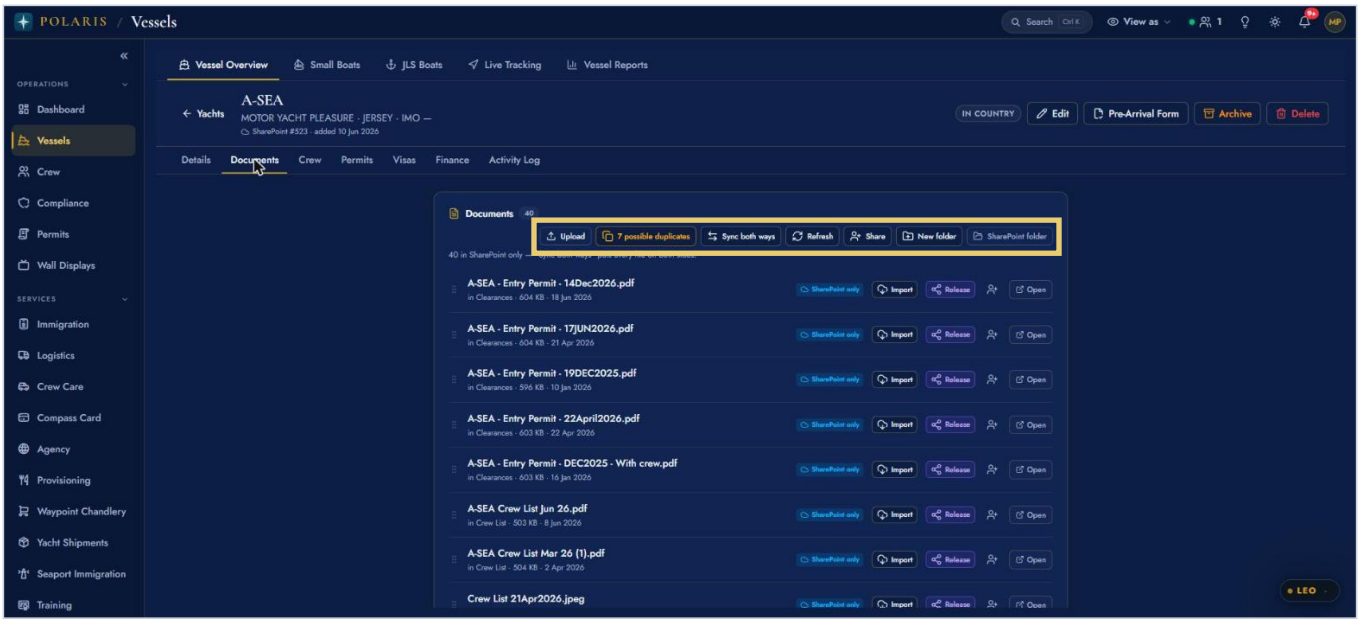

On the yacht's page, click **Documents**. You see every file in the yacht's SharePoint folder alongside anything uploaded in Polaris.

2 Upload, organise and share

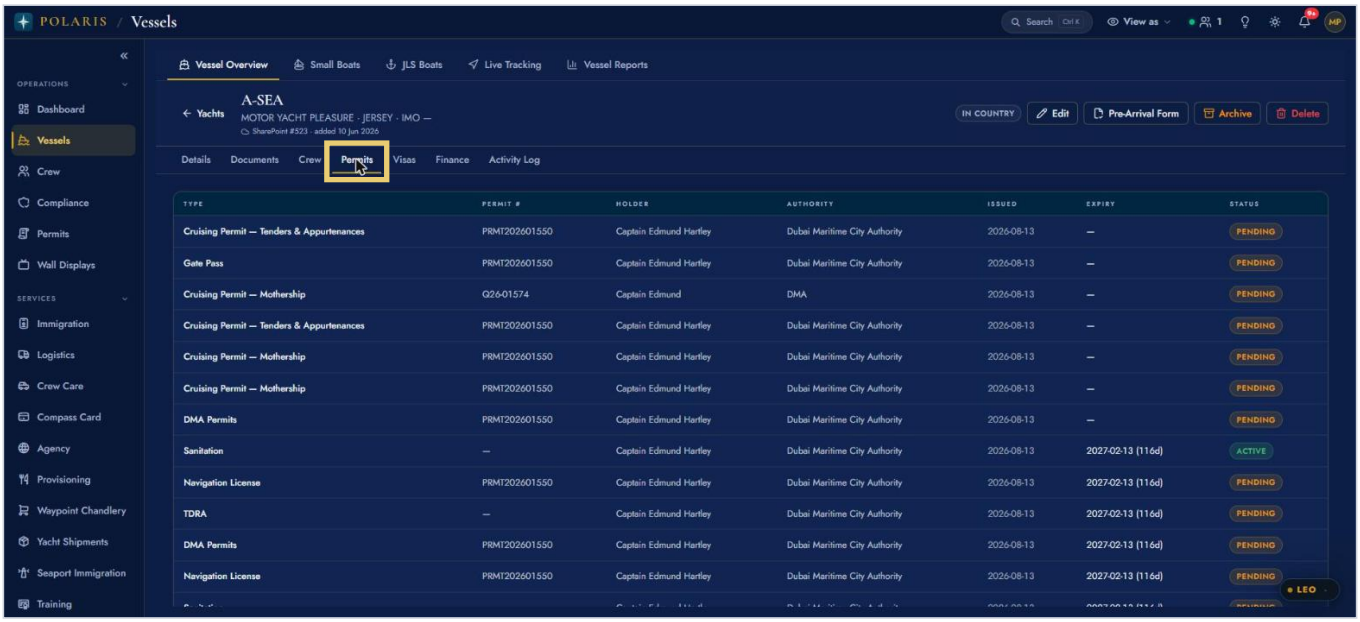

Use the buttons above the list:

- **Upload** — add a file from your computer.
- **New folder** — make a folder to group files.
- **Share** — send a secure link to the yacht or another contact.
- **Sync both ways** — copy SharePoint-only files into Polaris and Polaris files to SharePoint.
- **Open** on any row opens the file; **Release** shares that one file.

3 Check the yacht's permits

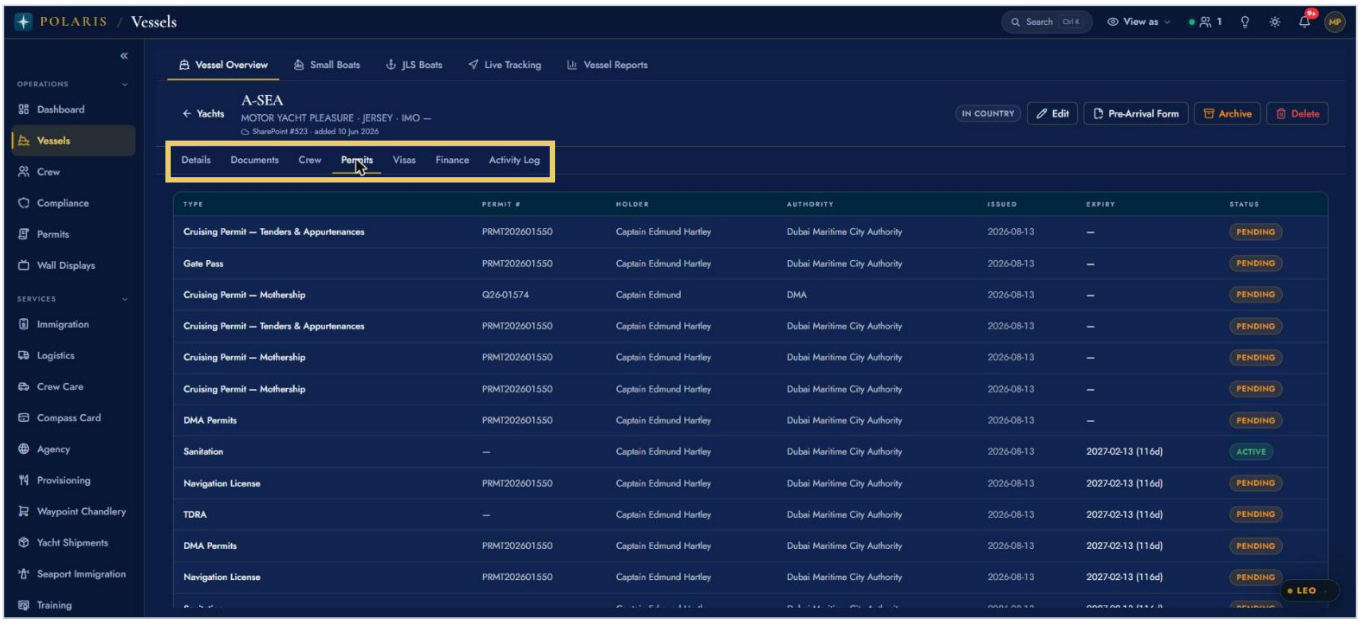

Click **Permits** to see every permit for this yacht — type, number, holder, issuing authority, issue and expiry dates and status. Expiry dates show the days left.

> **Tip:** To add or change a permit, use Operations -> Permits. See the guide "Add a new permit".

4 Other tabs

Crew lists everyone assigned to the yacht, **Visas** their visa status, **Finance** the yacht's invoices, and **Activity Log** every change and email sent for this yacht.

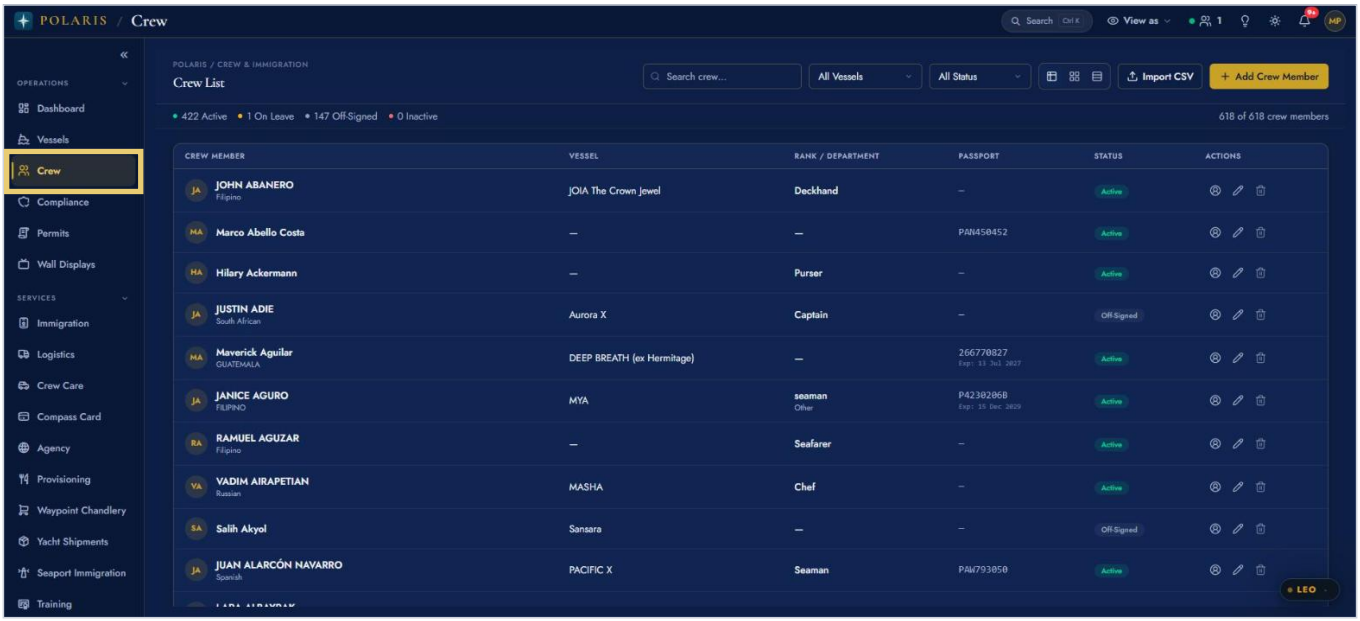

Find a crew member

4 steps · about 2 min

Search and filter the Crew List and open a crew profile.

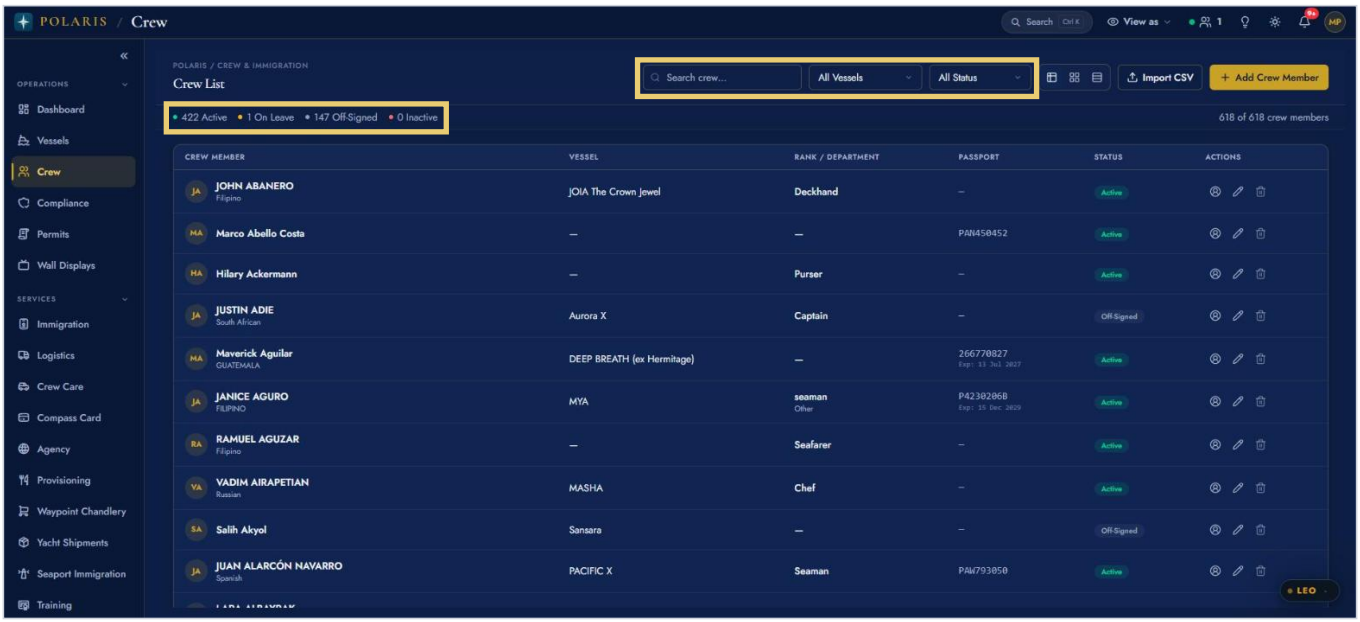

1 Open the Crew List

Click **Crew** in the Operations menu. The Crew List shows every crew member with their vessel, rank, passport and status.

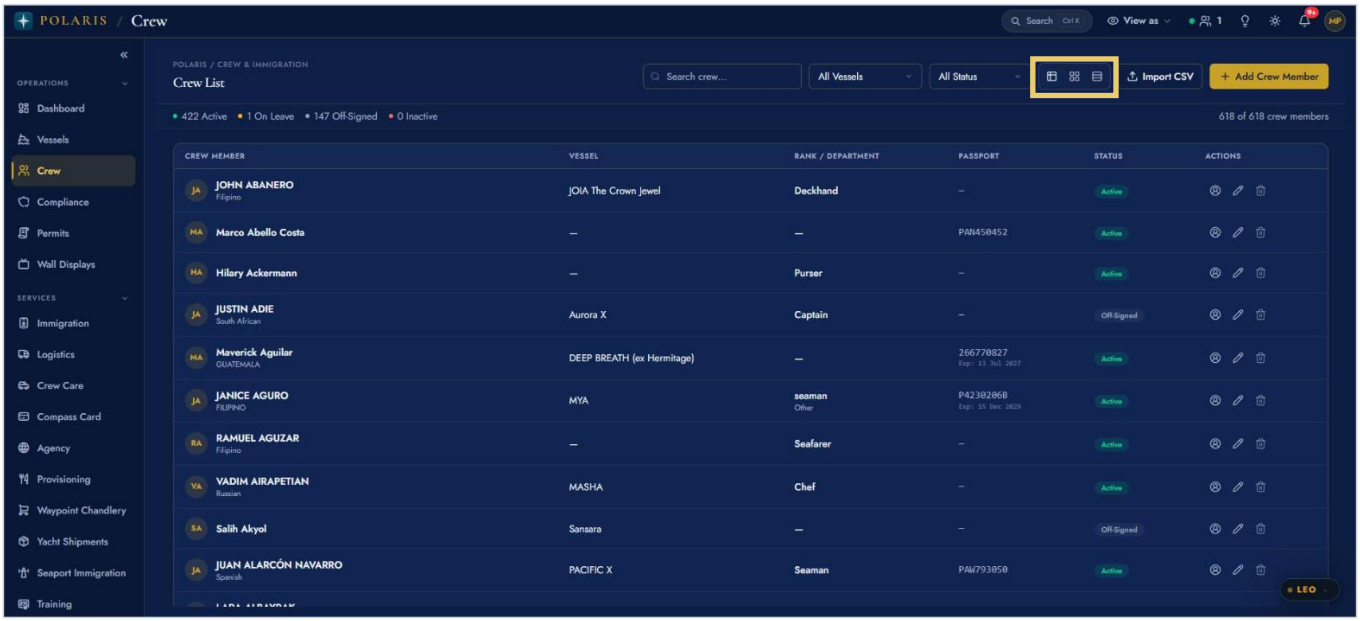

2 Search and filter

Type a name in **Search crew…**, then narrow the list with **All Vessels** and **All Status**. The counts under the title (**Active**, **On Leave**, **Off-Signed**, **Inactive**) are filters too — click one to show only those crew.

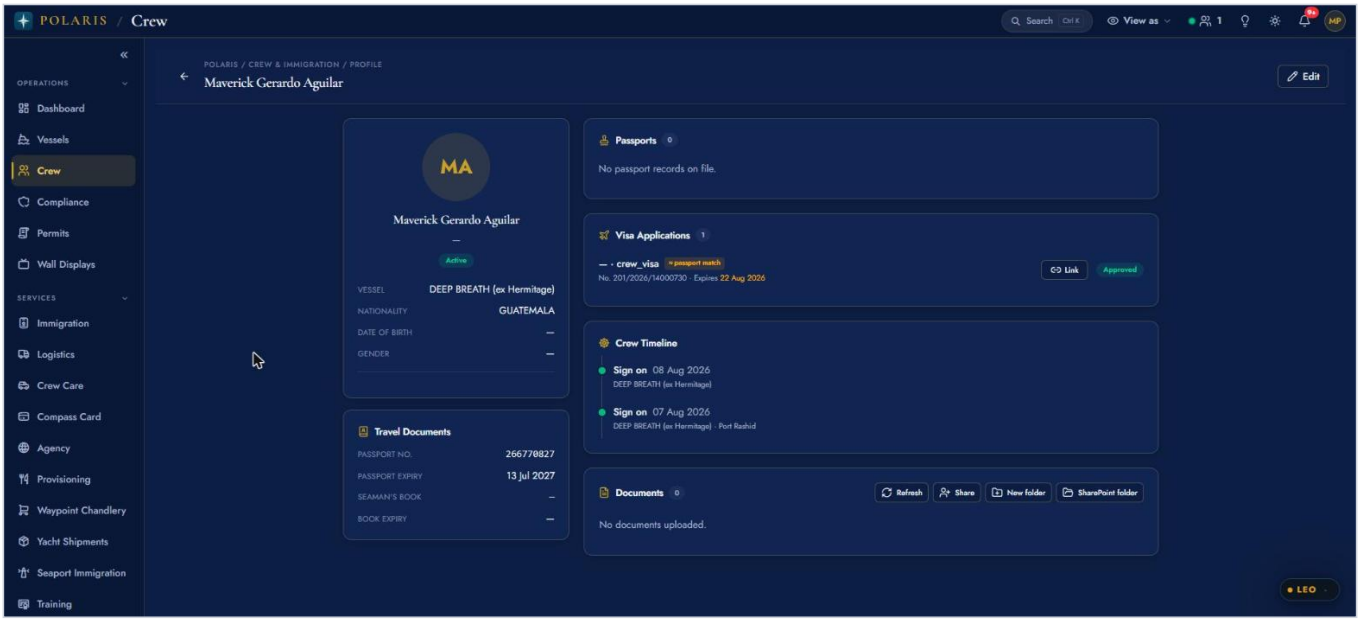

3 Change the layout

Use the three layout icons to switch between the table, a grid and cards.

4 Open a profile

Click a crew member's name, or the profile icon under **Actions**. The profile shows their details, travel documents, passports, visa applications, sign on / sign off timeline and documents.

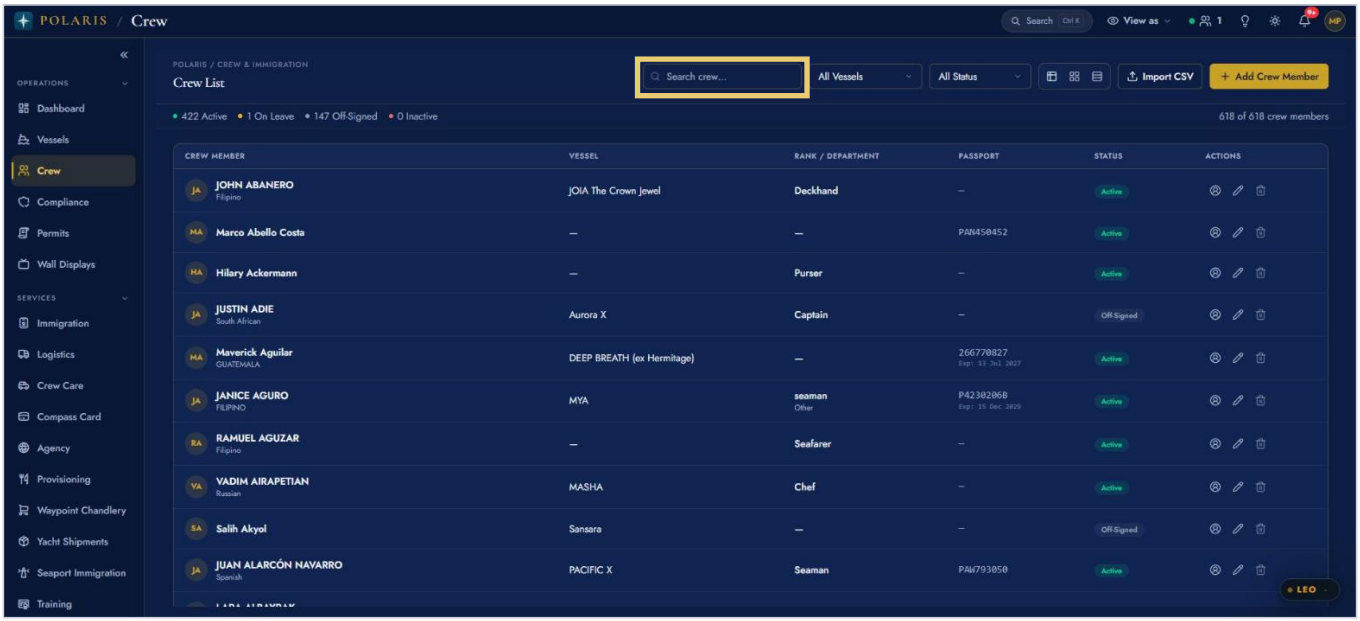

Add a crew member

5 steps · about 3 min

Create a crew record by hand or import a list from a CSV file.

1 Search first

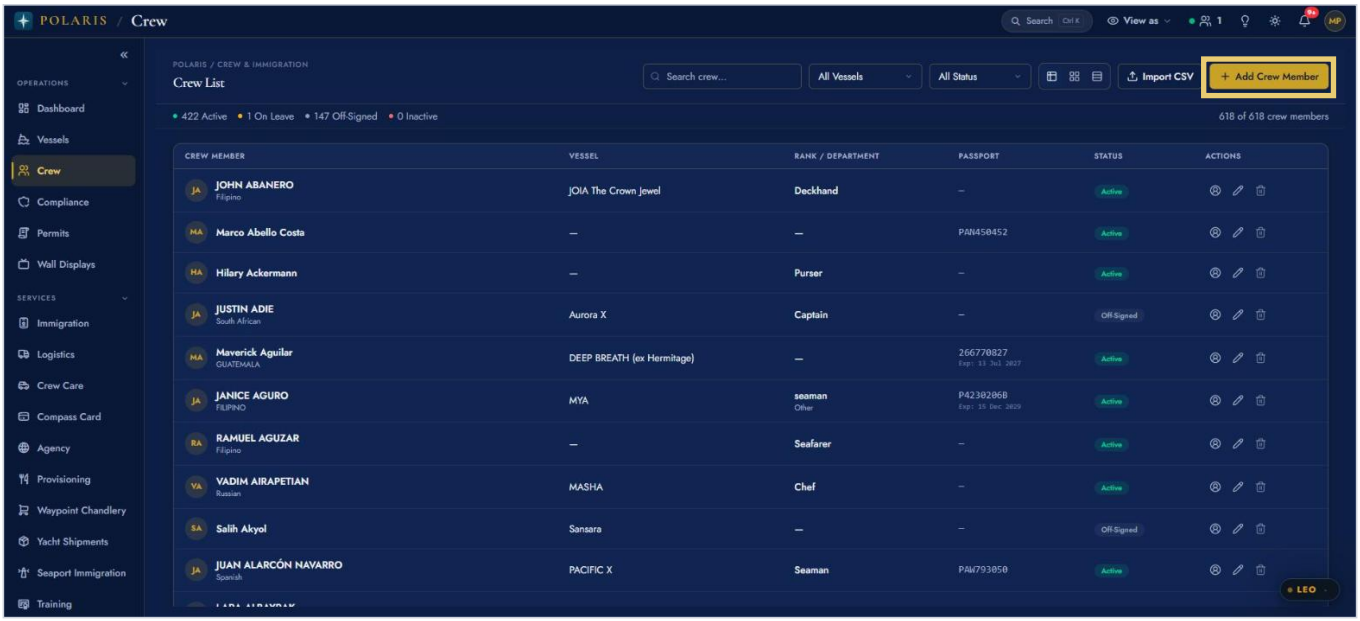

Before adding someone, search the Crew List for their name to make sure they aren't already in Polaris. Duplicates split a person's visa and sign-on history across two records.

> **Tip:** Found a duplicate already? Reports -> Duplicate Crew lets you merge them.

2 Click Add Crew Member

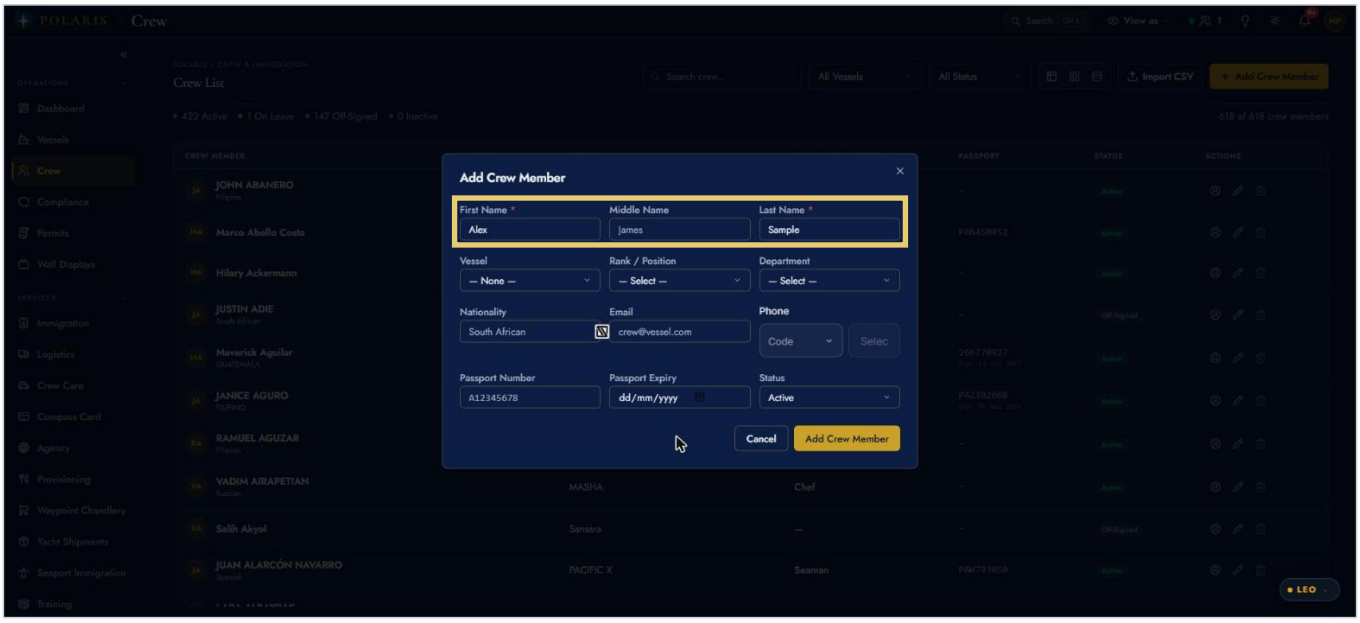

Click **Add Crew Member** at the top right of the Crew List.

3 Fill in the form

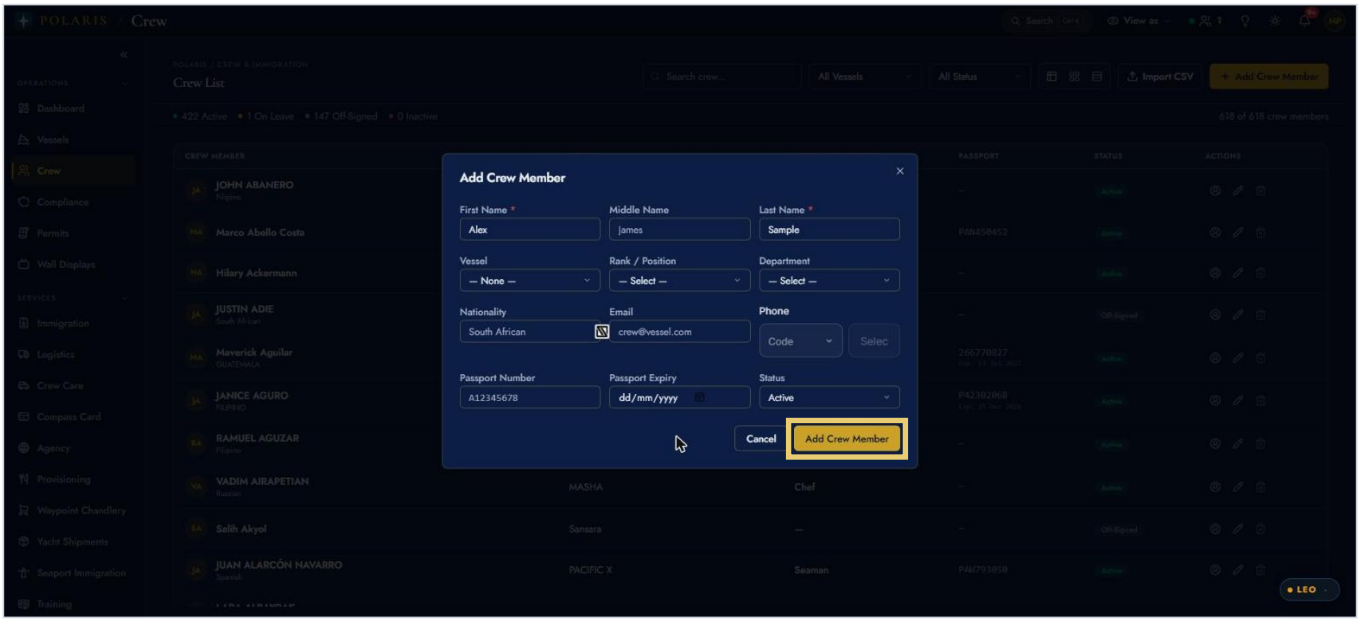

First Name and **Last Name** are required. Then add what you have:

- **Vessel**, **Rank / Position** and **Department**.
- **Nationality**, **Email** and **Phone** (choose the country code first).
- **Passport Number** and **Passport Expiry**.
- **Status** — Active for crew currently working.

4 Save

Click **Add Crew Member**. The new crew member appears in the list straight away. Open their profile and click **Edit** to add date of birth and other personal details.

5 Adding many crew at once

Click **Import CSV**, then **Template** to download a spreadsheet with the right columns (First Name, Last Name, Nationality, Rank, Passport Number, Date of Birth, …). Fill it in, choose it with **Choose CSV file** and click **Import**.

> **Tip:** The import doesn't check for duplicates — remove anyone already in Polaris from the file first.

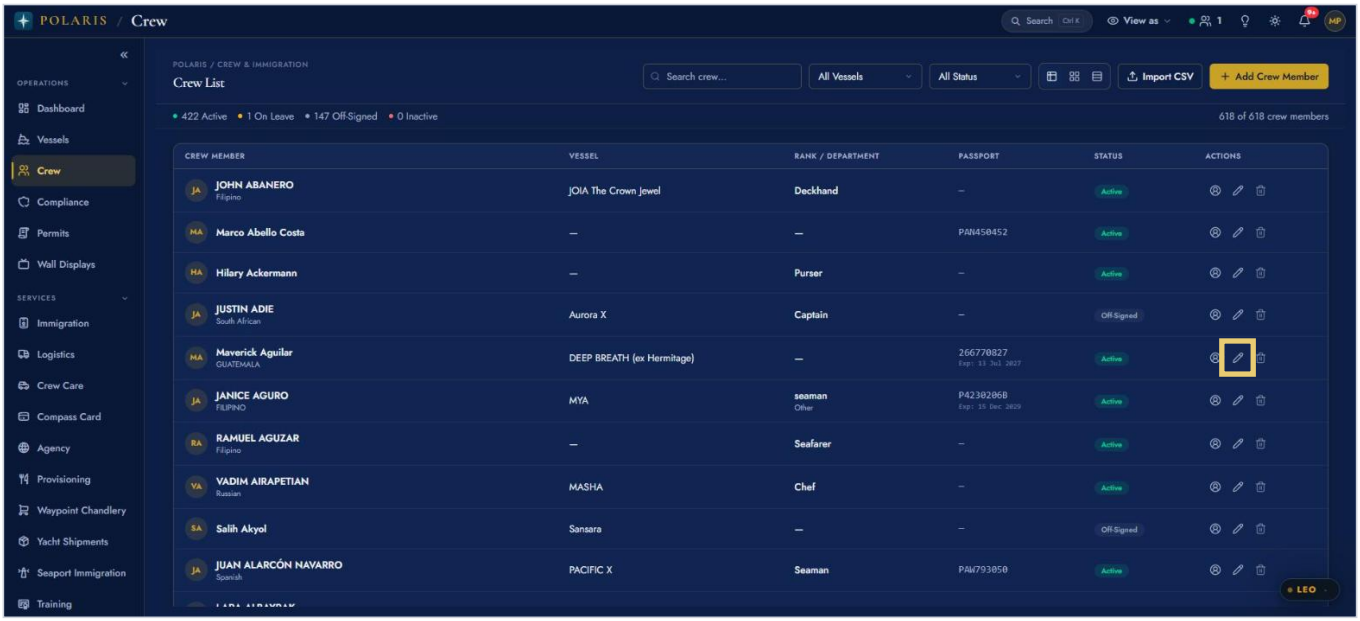

Edit a crew member

4 steps · about 3 min

Update a crew member's vessel, rank, passport and personal details, or remove them.

1 Quick edit from the list

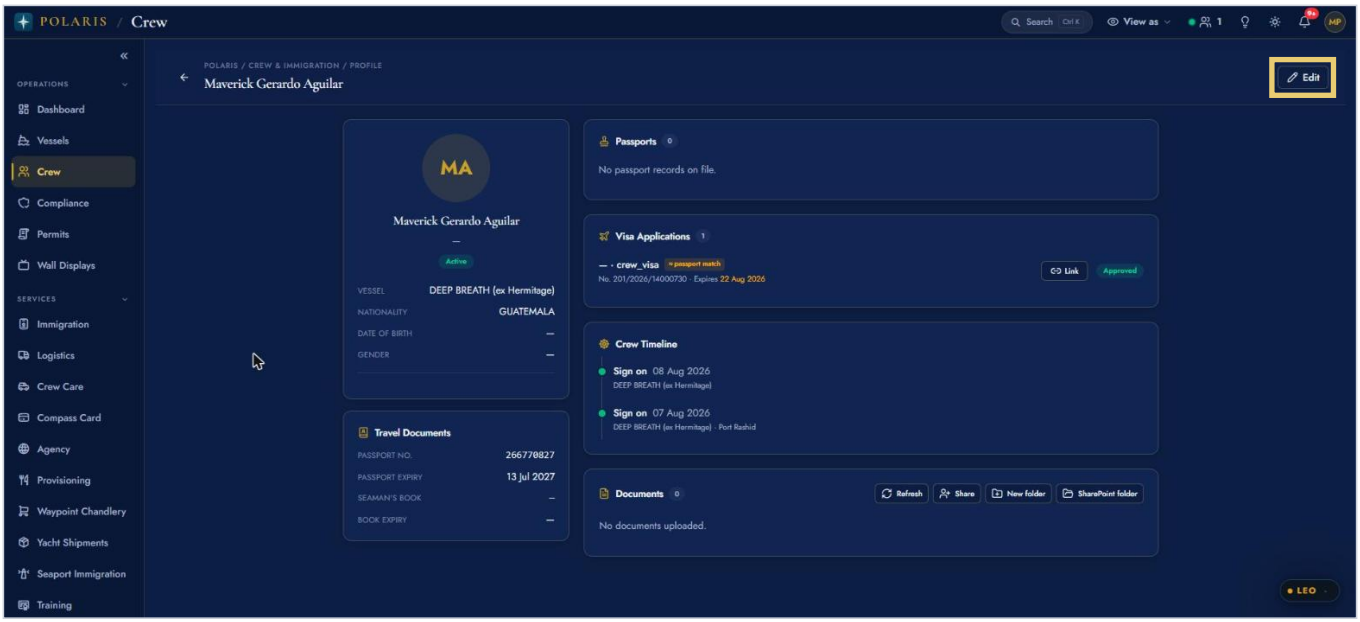

In the Crew List, click the pencil under **Actions**. **Edit Crew Member** opens with the same fields as when they were added — vessel, rank, department, nationality, contact details, passport and status. Click **Save Changes**.

> **Tip:** Moving someone to another vessel or marking them Off-Signed is done here, through Vessel and Status.

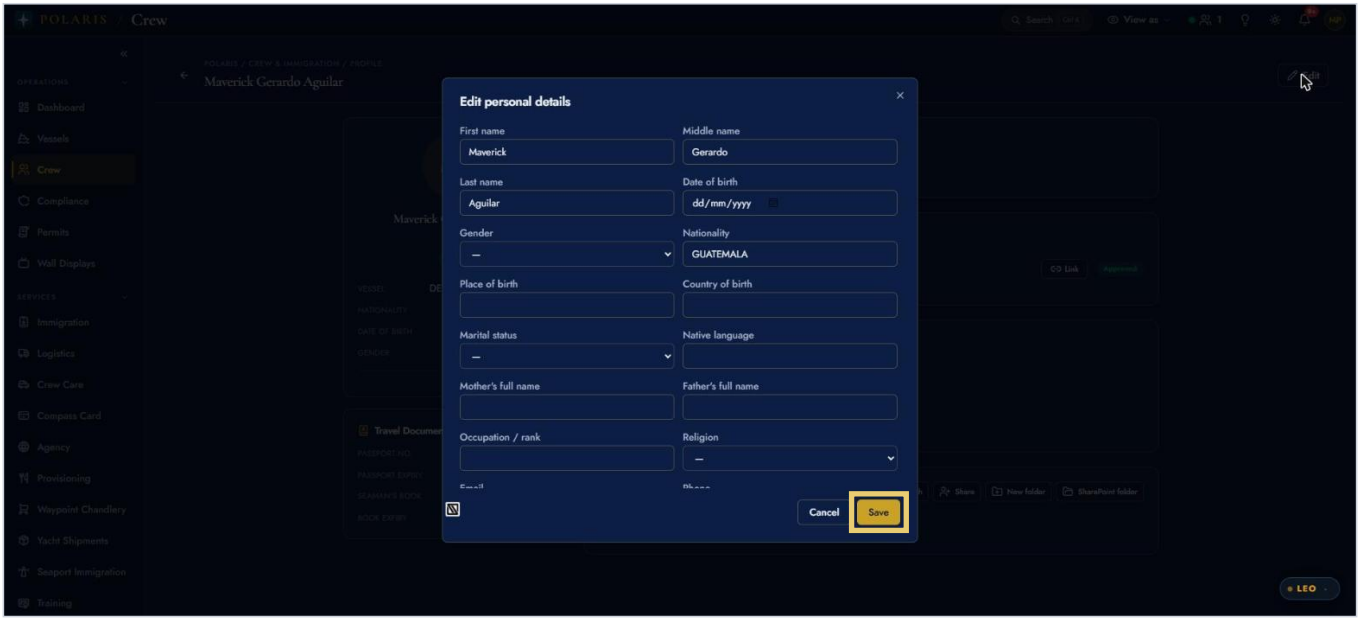

2 Edit personal details on the profile

Open the crew member's profile and click **Edit** (top right).

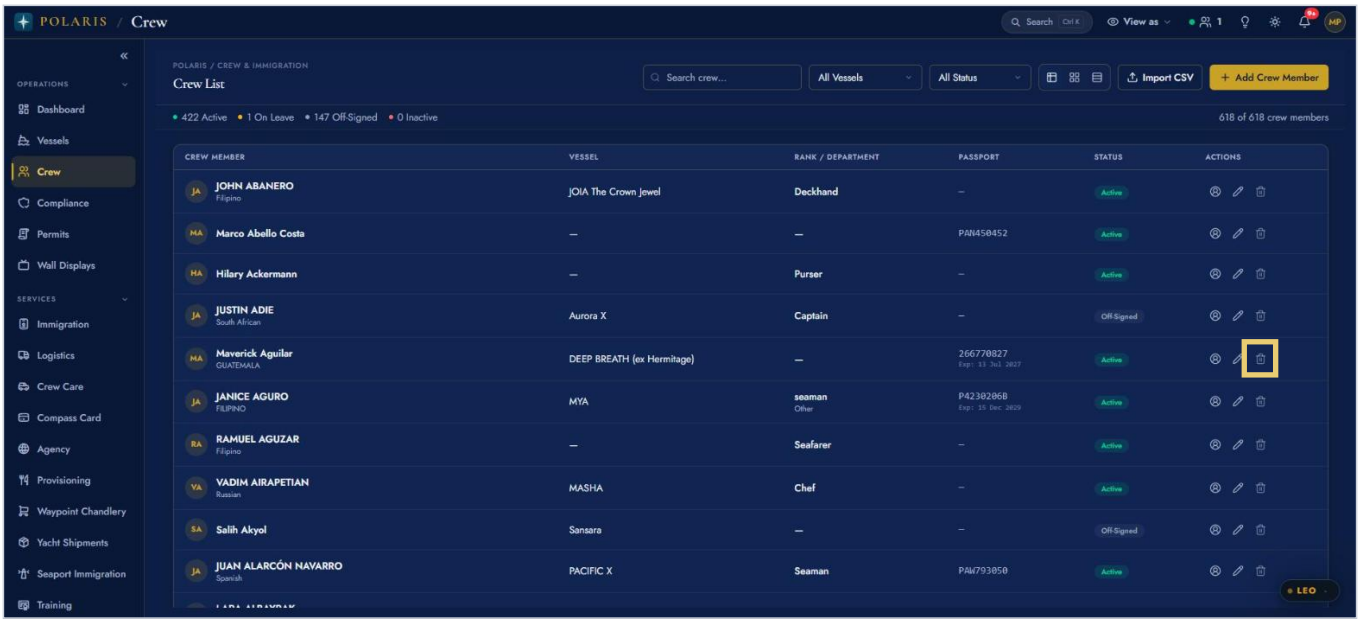

3 Update and save

Edit personal details holds the fuller record used on visa forms: date of birth, gender, nationality, place and country of birth, marital status, parents' names, occupation, religion, contact details and address. Click **Save**.

4 Remove a crew member

Click the bin under **Actions** and confirm **Remove crew member?**. The record goes to the Recycle Bin for 90 days, so it can be restored if removed by mistake.

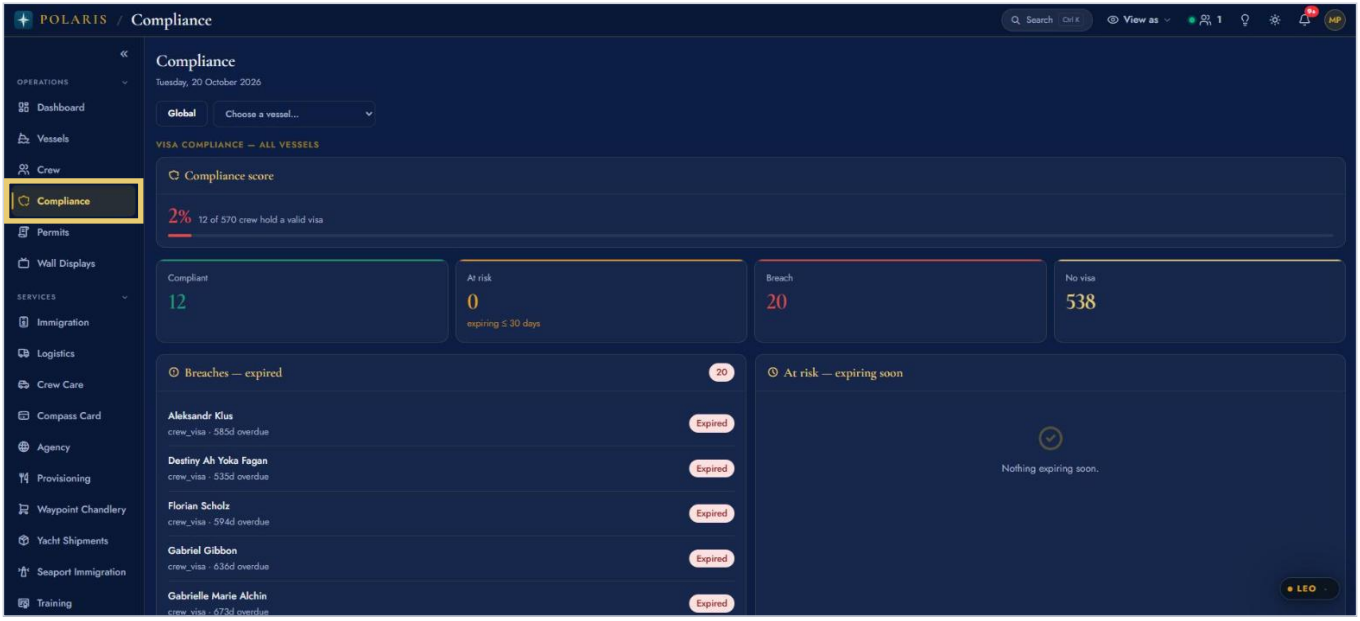

Check visa compliance

4 steps · about 2 min

See which crew hold a valid visa, who is at risk and who is in breach — fleet-wide or per vessel.

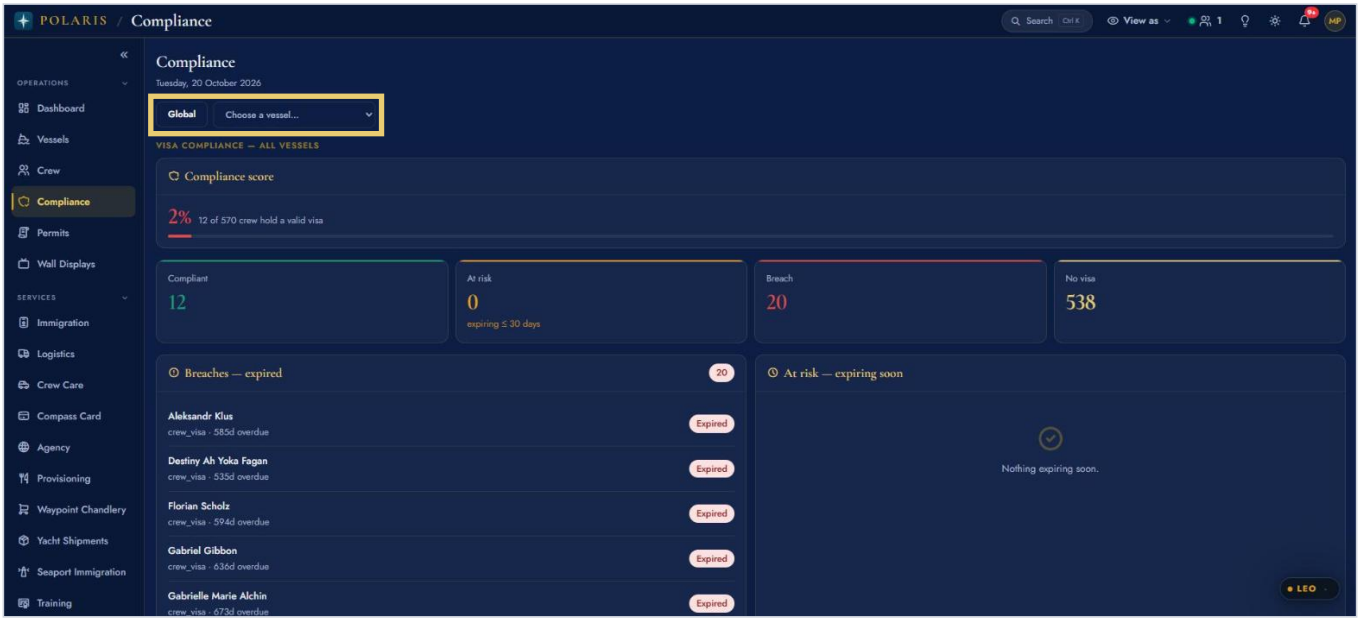

1 Open Compliance

Click **Compliance** in the Operations menu. It opens on **Global** — every vessel together.

2 Pick a vessel

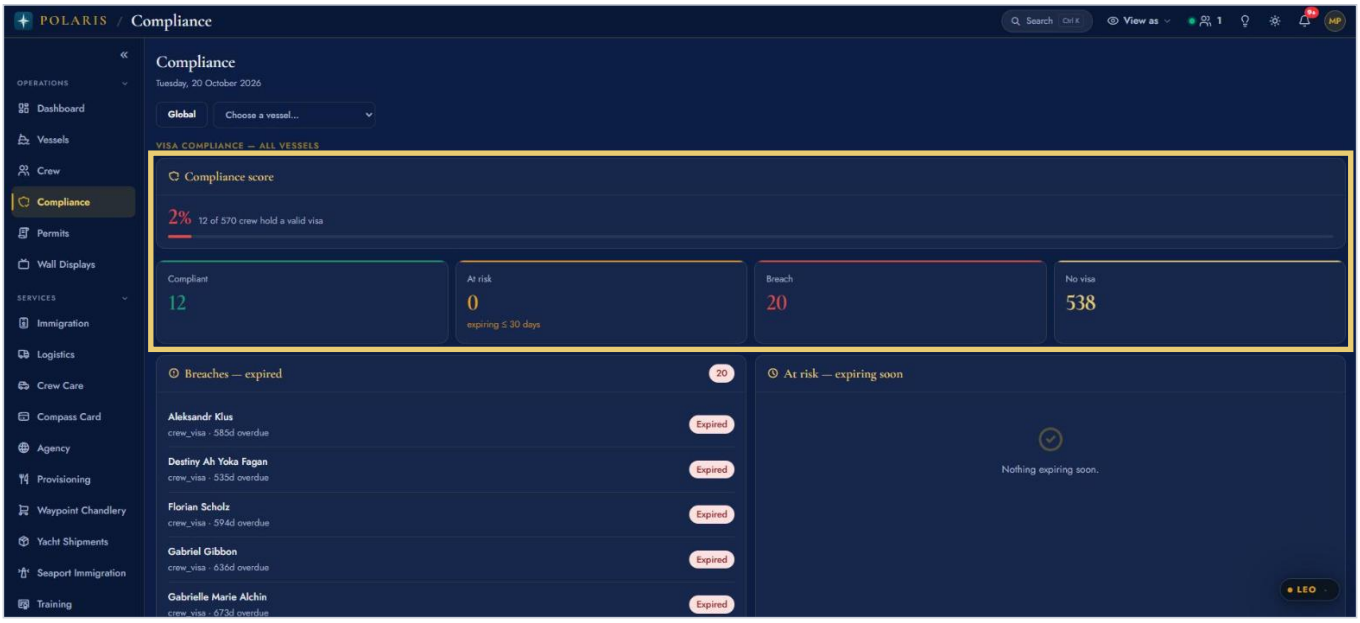

Choose a yacht from **Choose a vessel…** to see just its crew. Click **Global** to go back to the whole fleet.

3 Read the score and cards

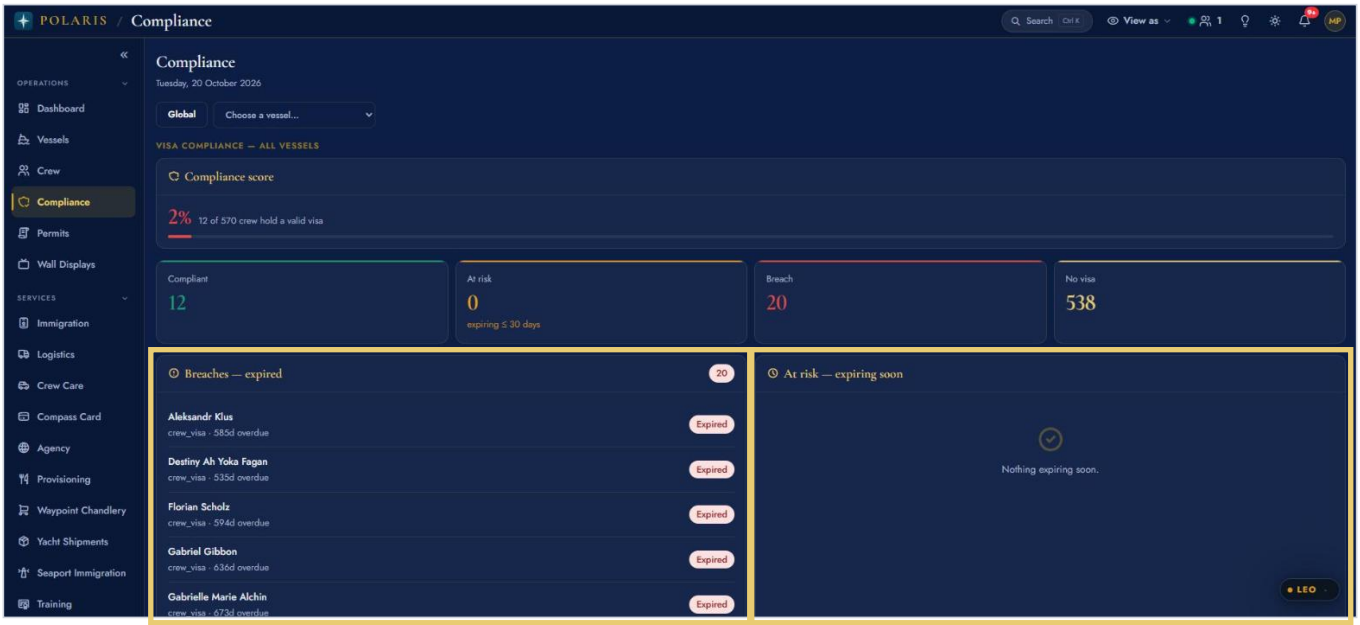

Compliance score is the share of crew with a valid visa. The cards split everyone into:

- **Compliant** — valid visa.
- **At risk** — visa expiring within 30 days.
- **Breach** — visa already expired.
- **No visa** — no visa on record.

4 Work the lists

Breaches — expired lists the crew in breach with how many days overdue; **At risk — expiring soon** lists those about to expire. Start renewals from Services -> Immigration.

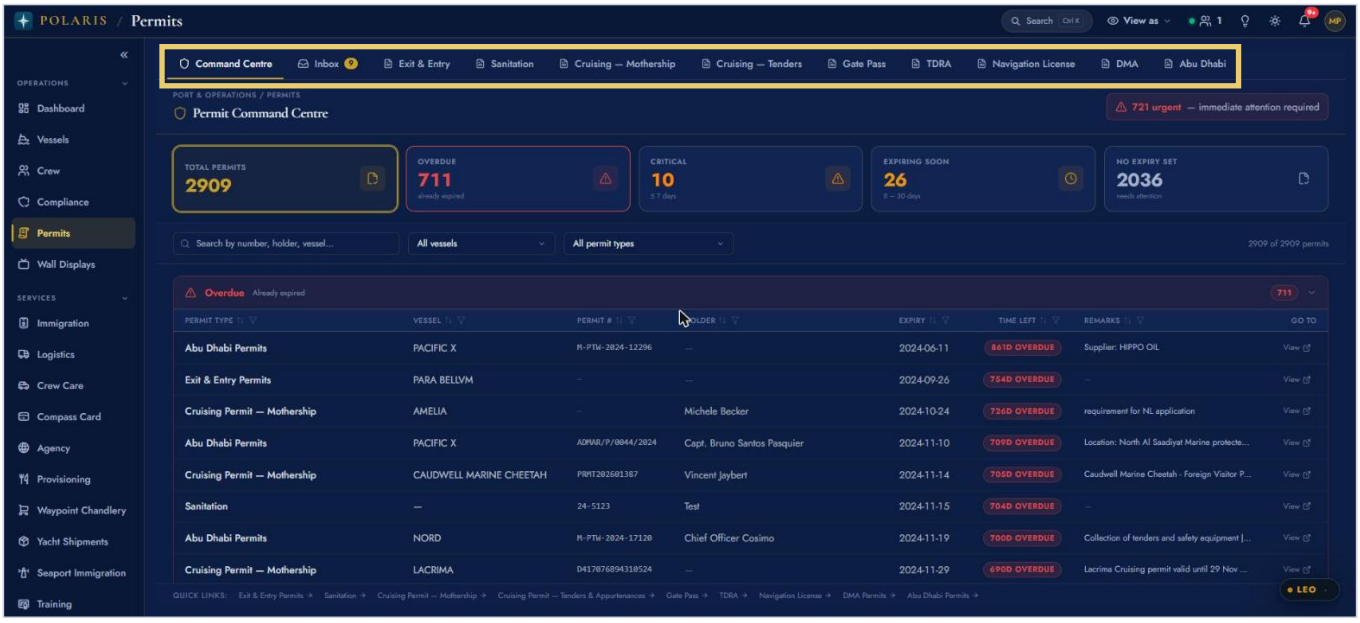

Track permits in the Command Centre

3 steps · about 2 min

See every permit across the fleet and catch the ones that are expired or about to expire.

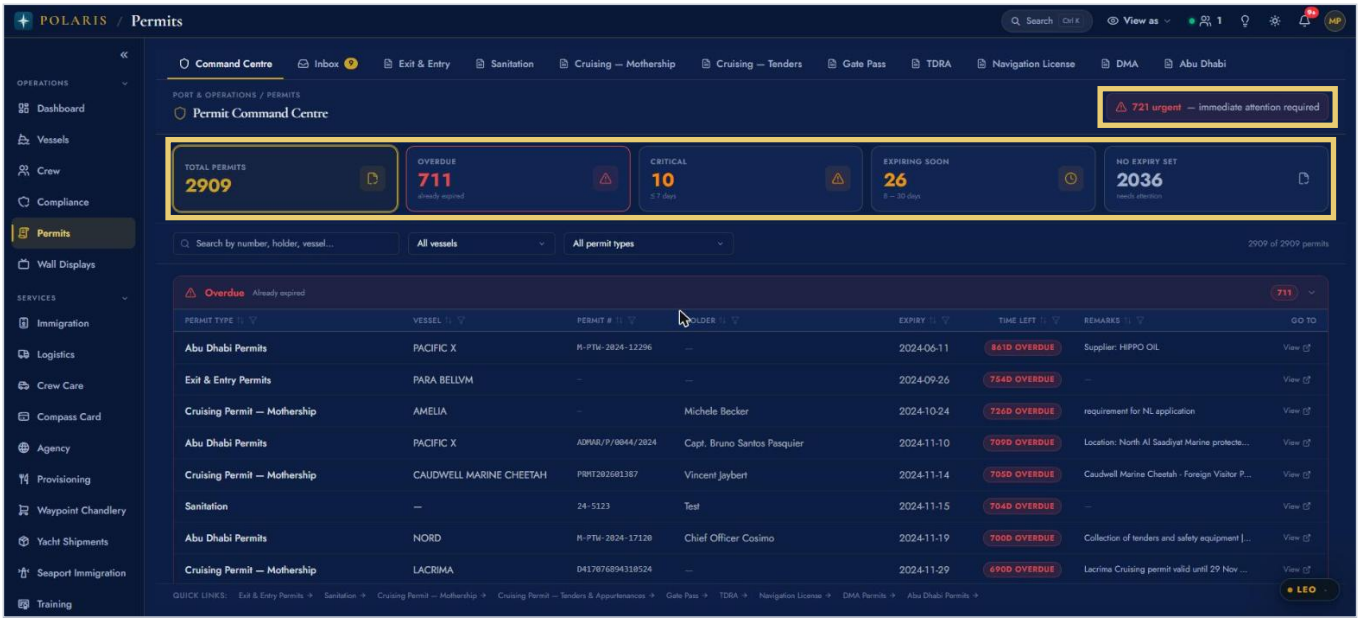

1 Open Permits

Click **Permits** in the Operations menu. The **Command Centre** tab opens first; the other tabs hold each permit type (Exit & Entry, Sanitation, Cruising, Gate Pass, TDRA, Navigation License, DMA, Abu Dhabi).

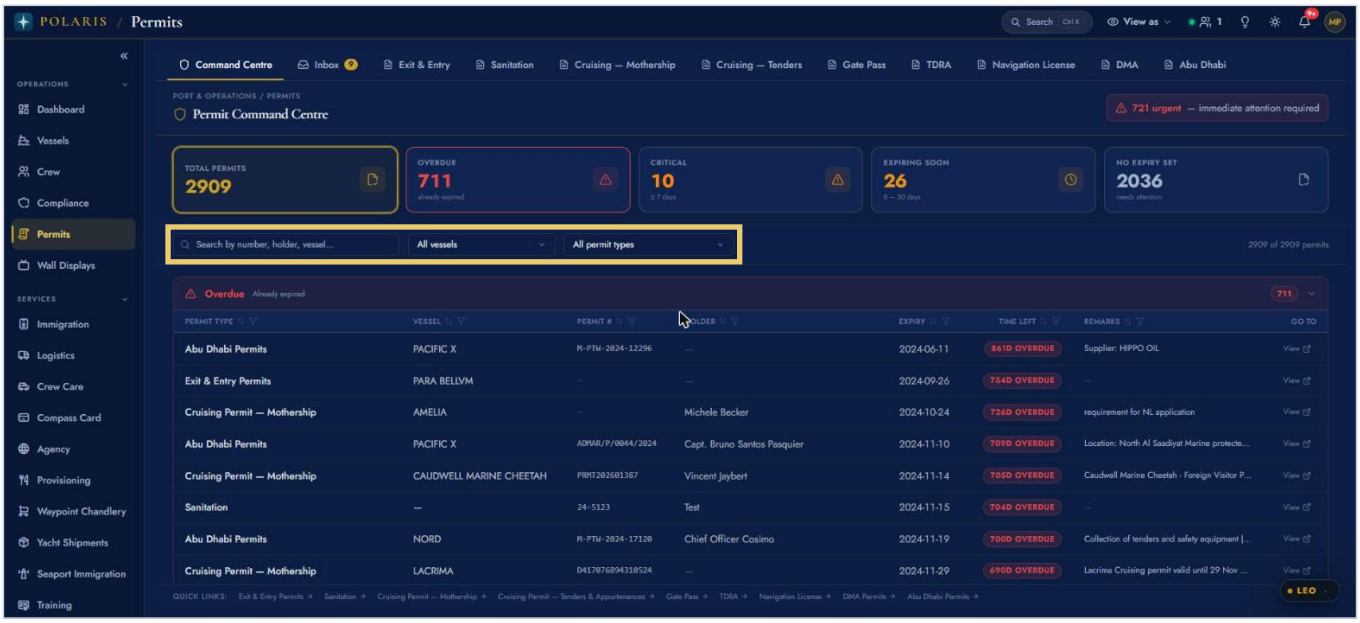

2 Use the status cards

Click a card to filter the list: **Overdue** (already expired), **Critical** (7 days or less), **Expiring Soon** (8–30 days) and **No Expiry Set** (needs a date). The red banner counts everything urgent.

3 Search and filter

Search by permit number, holder or vessel, or pick from **All vessels** and **All permit types**. Each row shows the time left; click **View** to open the permit on its own tab.

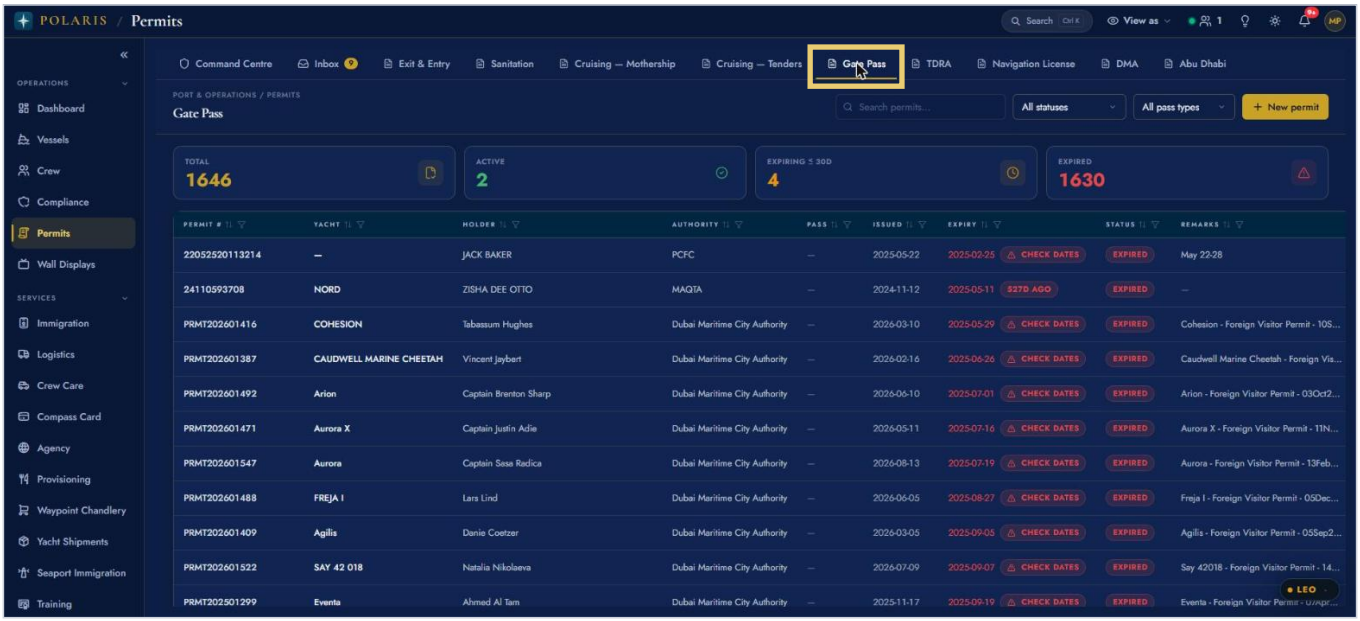

Add a new permit

5 steps · about 4 min

Record a gate pass, navigation licence or any other permit and email it to the yacht.

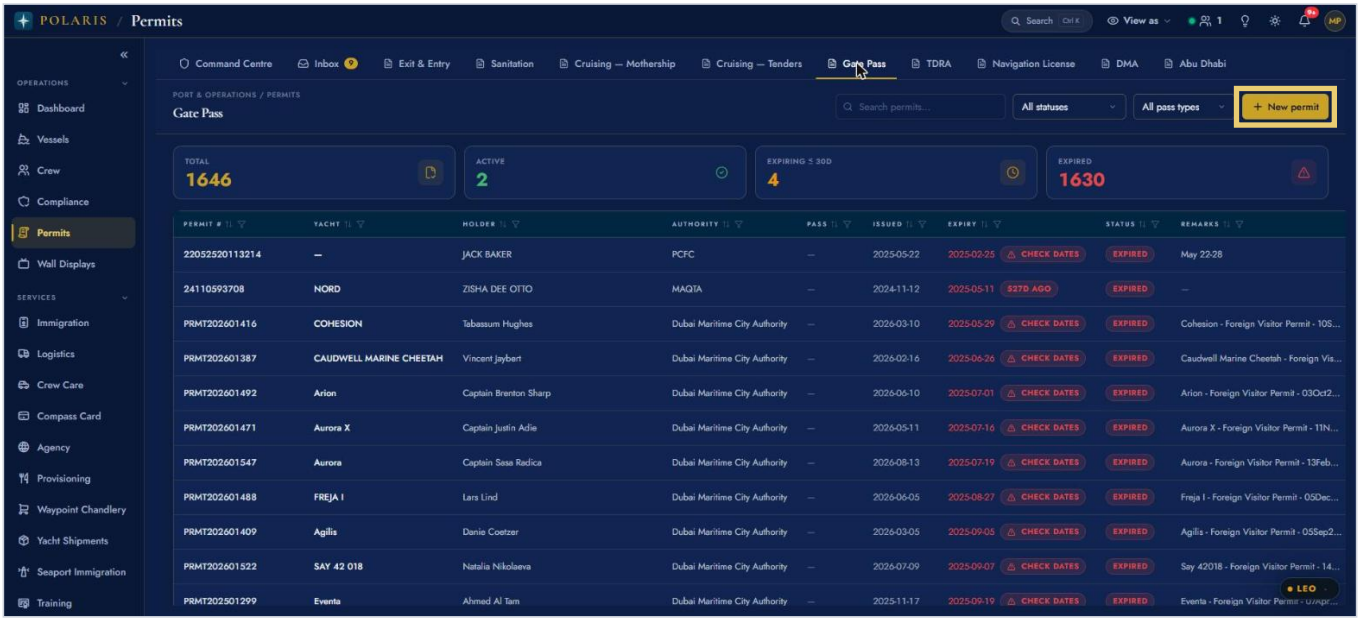

1 Open the permit type's tab

In **Permits**, click the tab for the kind of permit — for example **Gate Pass** or **Navigation License**. Each tab lists that type with Total, Active, Expiring and Expired counts.

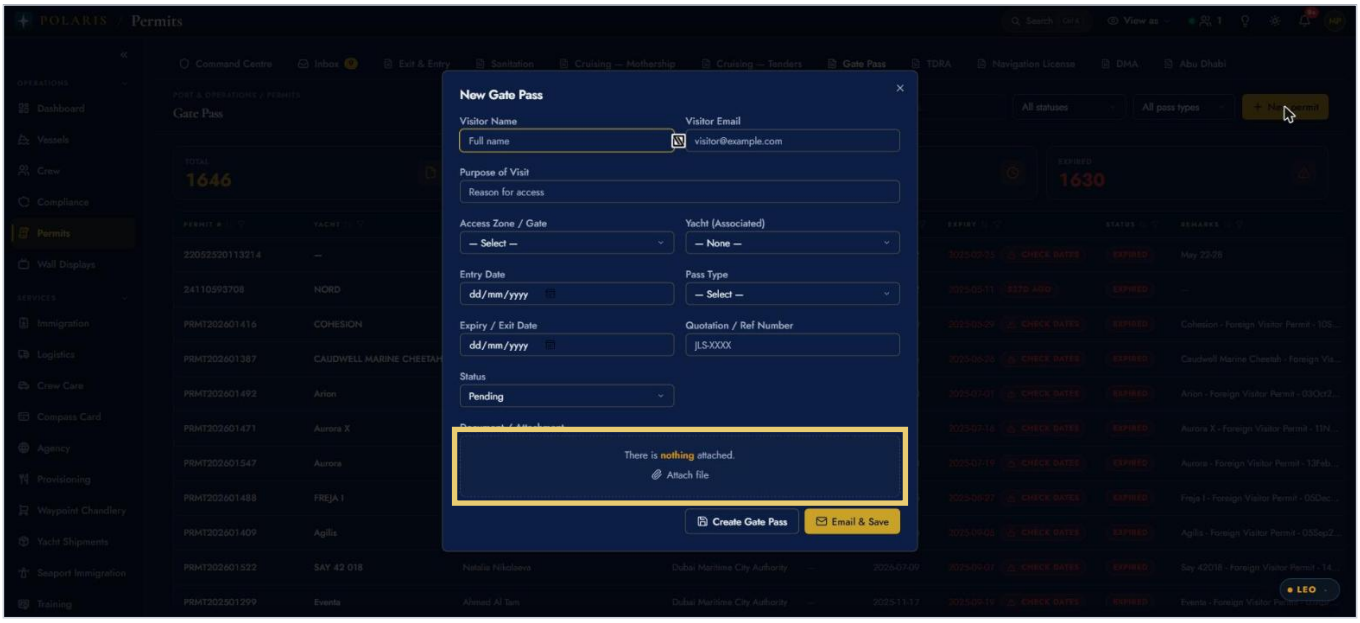

2 Click New permit

Click **New permit** at the top right. Each permit type has its own form with the fields that permit needs.

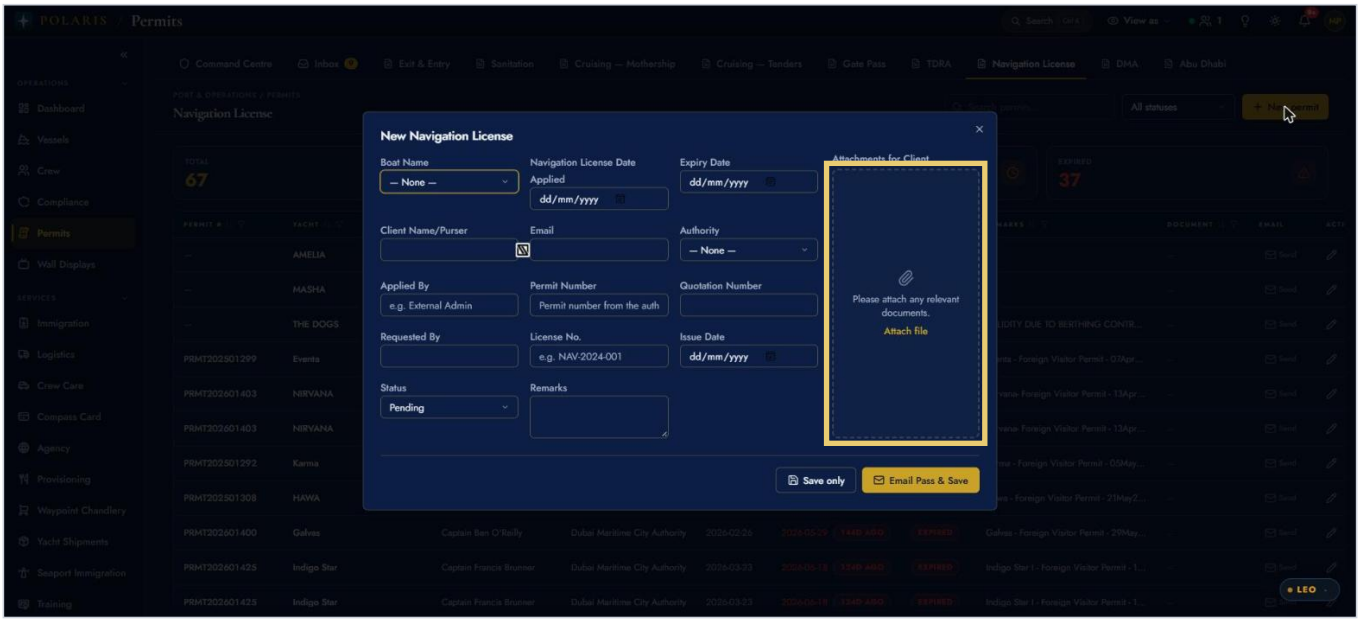

3 Example — Gate Pass

Enter the **Visitor Name** and **Visitor Email**, the **Purpose of Visit**, the **Access Zone / Gate**, the associated **Yacht**, the **Entry Date** and **Expiry / Exit Date**, the **Pass Type**, the **Quotation / Ref Number** and the **Status**. Use **Attach file** to add the pass itself.

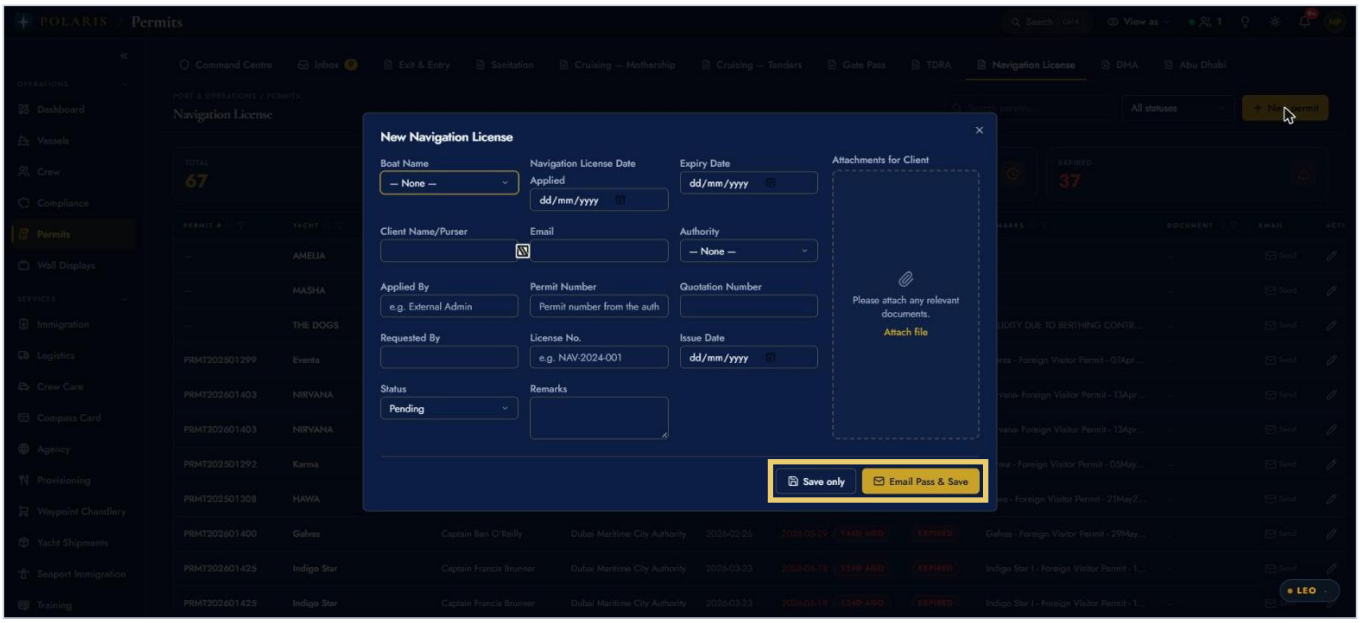

4 Example — Navigation License

Choose the **Boat Name**, then fill in the dates, **Client Name/Purser**, **Email**, **Authority**, **Permit Number**, **License No.** and **Status**. Drop the licence and any supporting documents into **Attachments for Client**.

5 Save, or email and save

Click **Save only** / **Create Gate Pass** to record the permit, or **Email Pass & Save** / **Email & Save** to also email it, with its attachments, to the client.

> **Tip:** Set the Expiry Date — permits without one show under "No Expiry Set" and get no reminders.

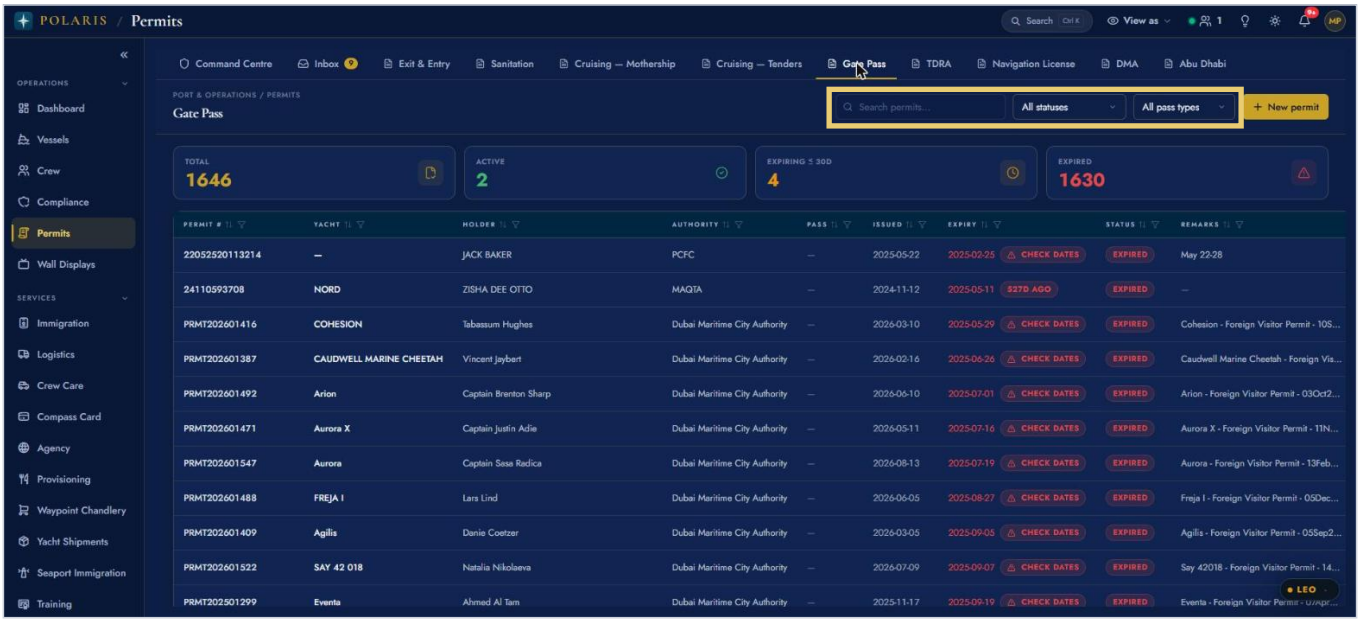

Edit or renew a permit

4 steps · about 2 min

Correct a permit, update its dates when it is renewed, resend it or delete it.

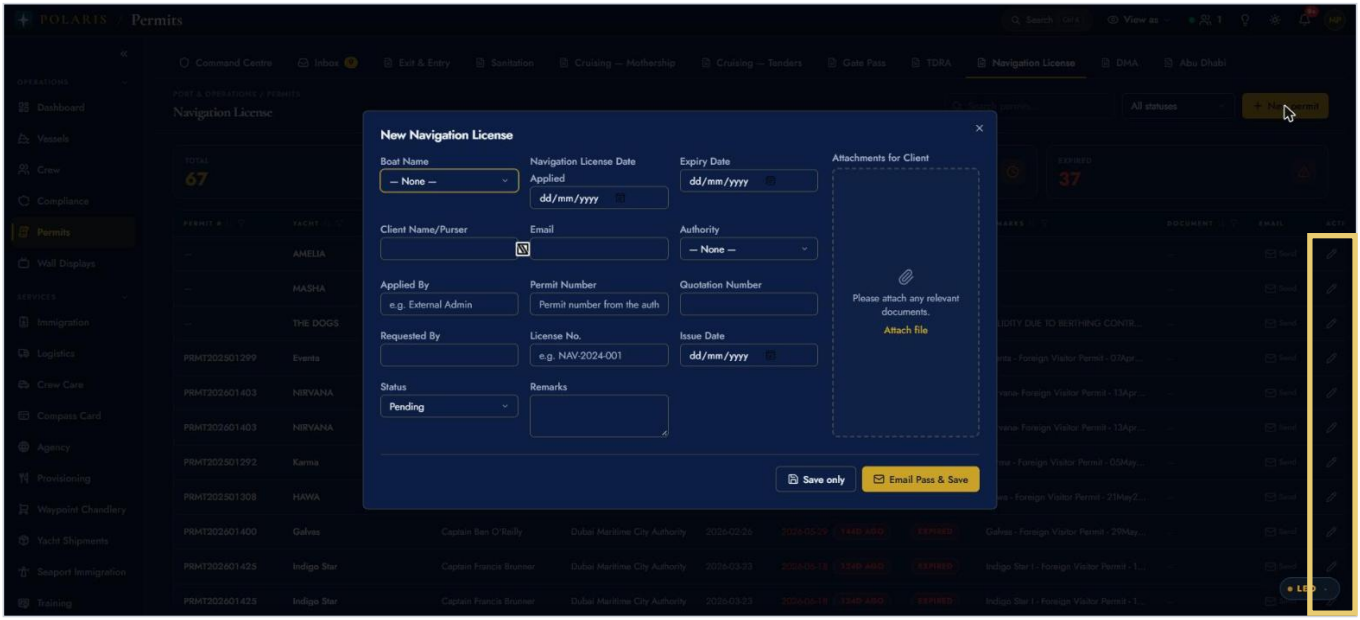

1 Find the permit

Open the permit type's tab and search by permit number, yacht or holder, or filter by status. From the Command Centre, click **View** on any row to jump straight to it.

2 Edit

Click the pencil at the end of the row. The same form opens with the permit's details — change what you need and save.

3 Renewing a permit

When a permit is renewed, open it with the pencil and update the **Issue Date**, **Expiry Date**, permit number and **Status** (set it to Active). Attach the new document. The expiry reminders restart from the new date.

> **Tip:** Prefer to keep the old permit for the record? Add the renewal as a new permit instead and set the old one to Expired.

4 Resend or delete

Use **Send** / **Resend** on the row to email the permit to the client again. The bin deletes a permit entered by mistake (you'll be asked to confirm).

POLARIS · HOW-TO GUIDE · OPERATIONS

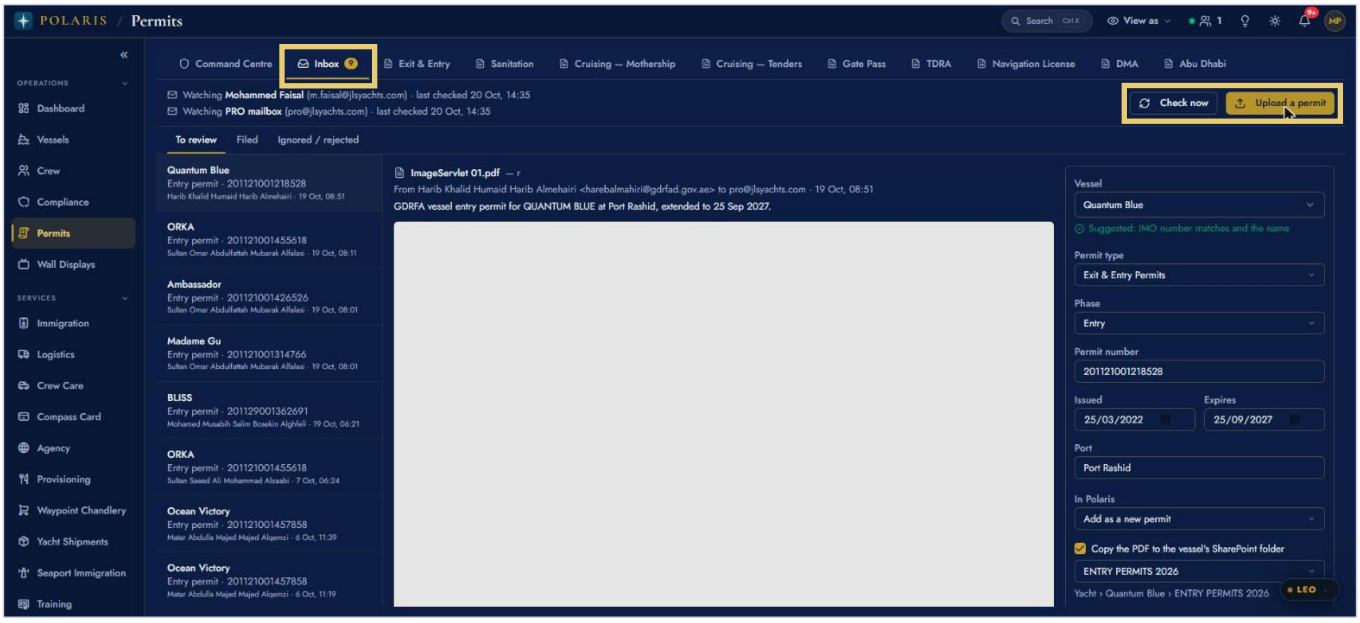

File permits from the Permit Inbox

5 steps · about 4 min

Check permits that arrive by email, file them to the vessel and send them to the yacht.

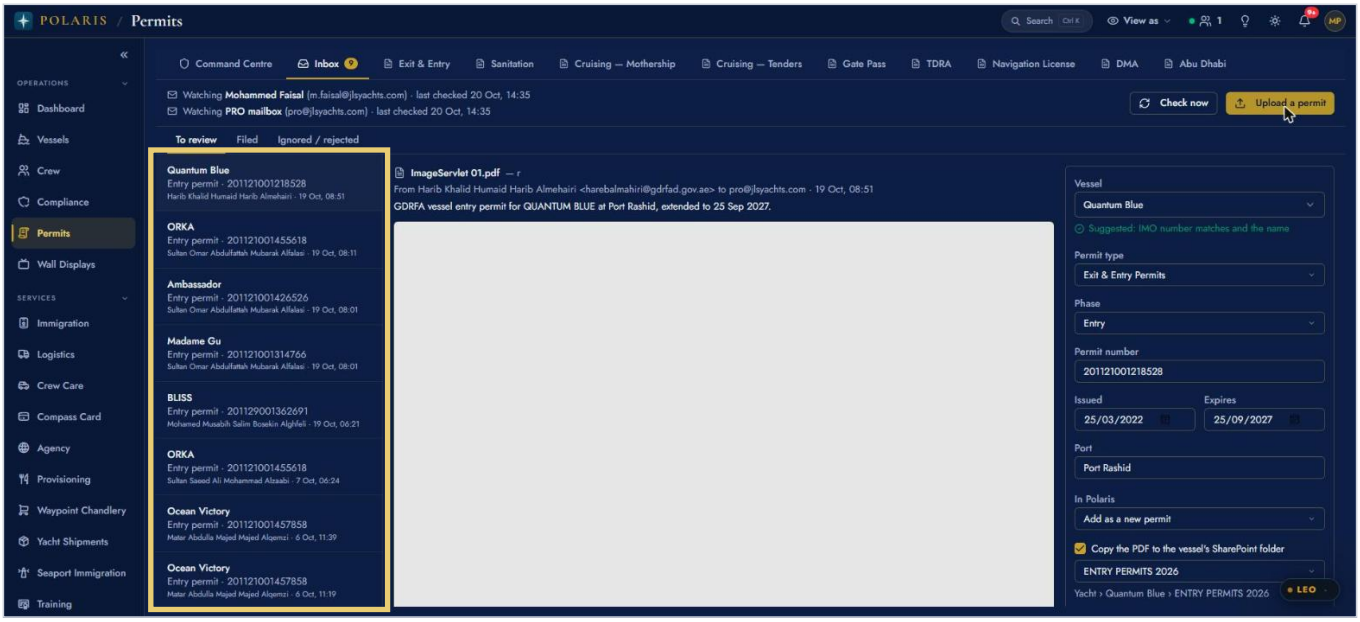

1 Open the Inbox

In **Permits**, click **Inbox**. The badge shows how many permits are waiting. Polaris watches the permit mailboxes shown at the top and reads every permit PDF that arrives. Click **Check now** to look for new mail immediately, or **Upload a permit** to add a PDF yourself.

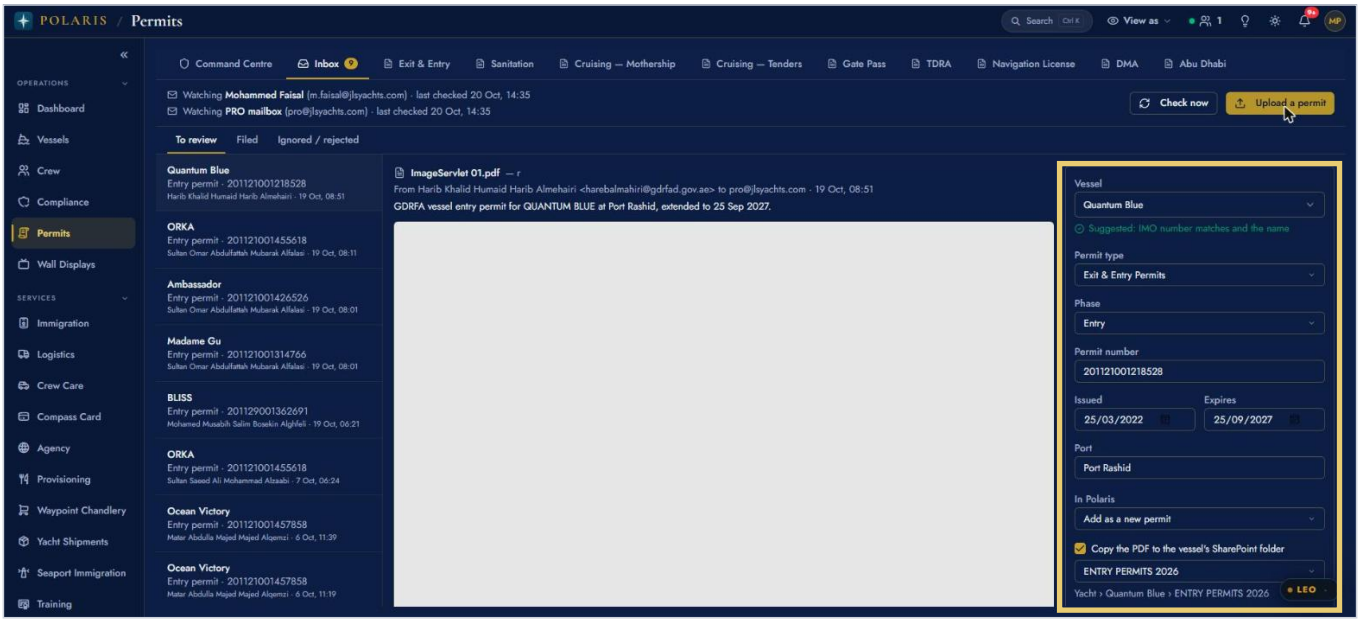

2 Pick a permit to review

To review lists each permit with the vessel, permit type, number and who sent it. Click one to see the PDF and the details Polaris read from it.

3 Check the details

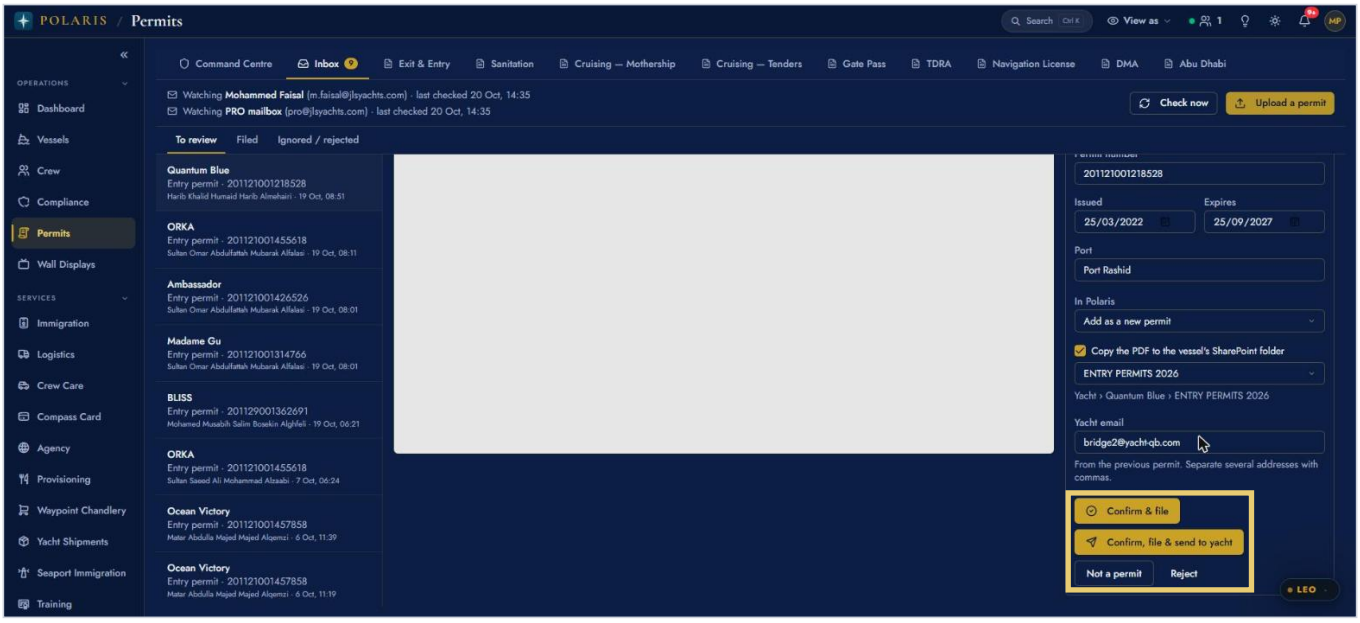

On the right, check the **Vessel** (Polaris suggests one and tells you why), **Permit type**, **Phase**, **Permit number**, **Issued** and **Expires** dates and **Port**. Under **In Polaris** choose **Add as a new permit** or the existing permit it updates.

4 File it, and send it to the yacht

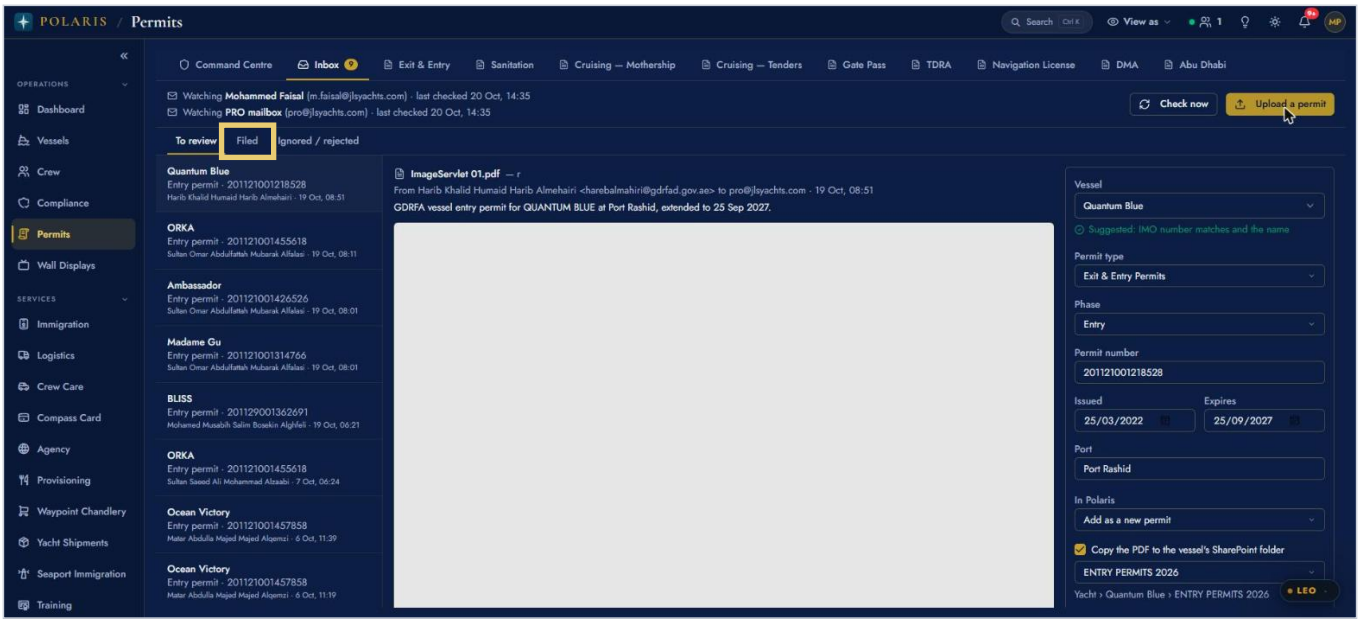

Leave **Copy the PDF to the vessel's SharePoint folder** ticked and check the folder. Check the **Yacht email** (taken from the previous permit; separate several with commas). Then click:

- **Confirm & file** — save it in Polaris and SharePoint.
- **Confirm, file & send to yacht** — also email it to the yacht as a secure link.
- **Not a permit** or **Reject** — clear it from the list.

5 Send a filed permit later

Open the **Filed** sub-tab to see everything already filed. Use **Send to yacht** (or **Send again**) on any of them. Every permit email is recorded in the vessel's Activity Log.

POLARIS · HOW-TO GUIDE · OPERATIONS

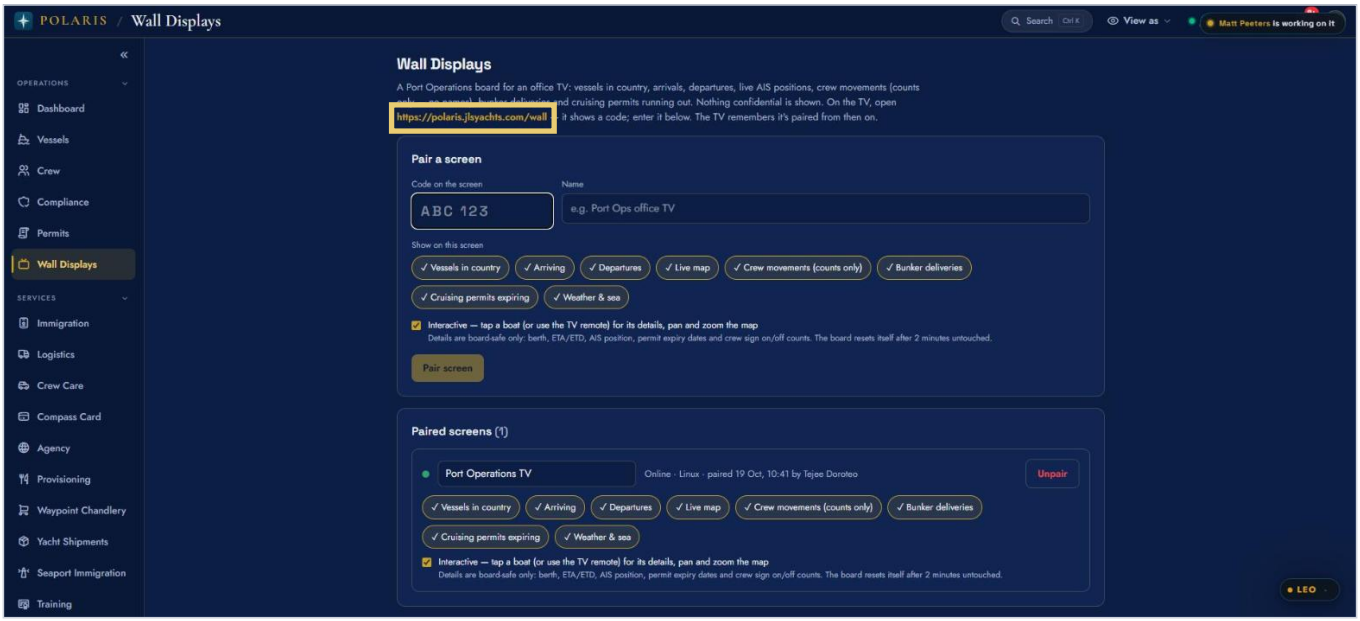

Pair an office TV (Wall Displays)

5 steps · about 3 min

Put the Port Operations board on an office screen and choose what it shows.

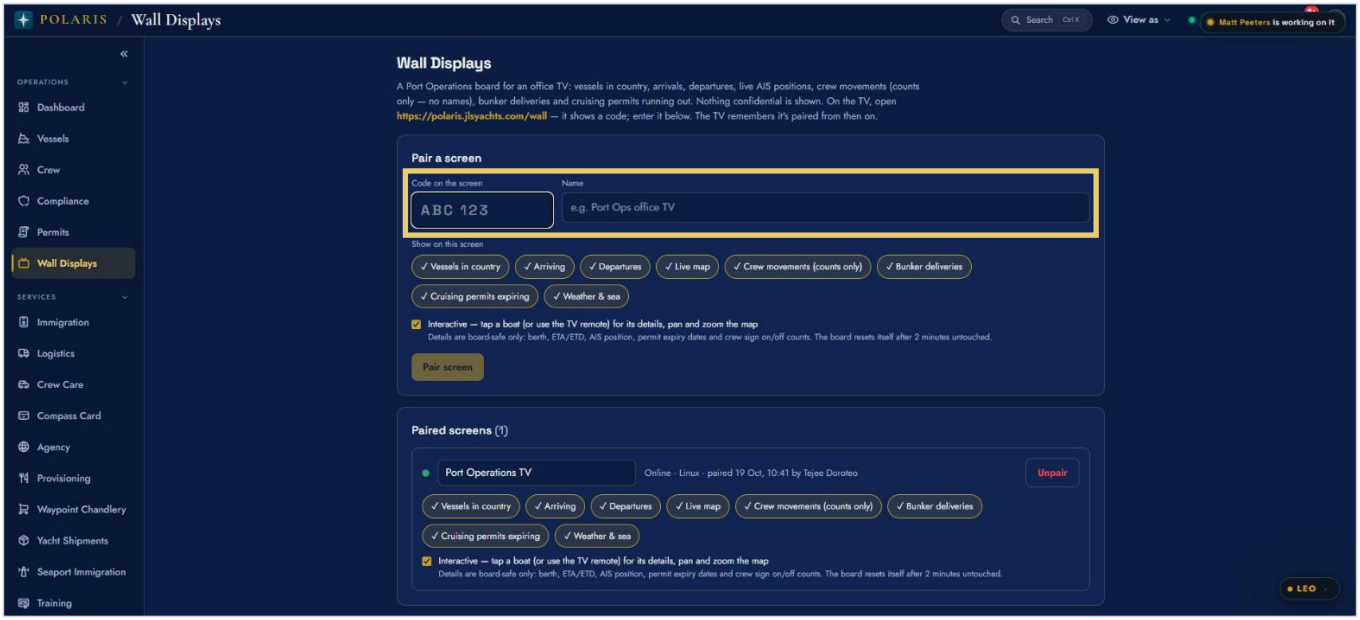

1 Open /wall on the TV

On the TV's browser, open **polaris.jlsyachts.com/wall**. The screen shows a pairing code. Nothing confidential is ever shown on the board — crew movements are counts only, no names.

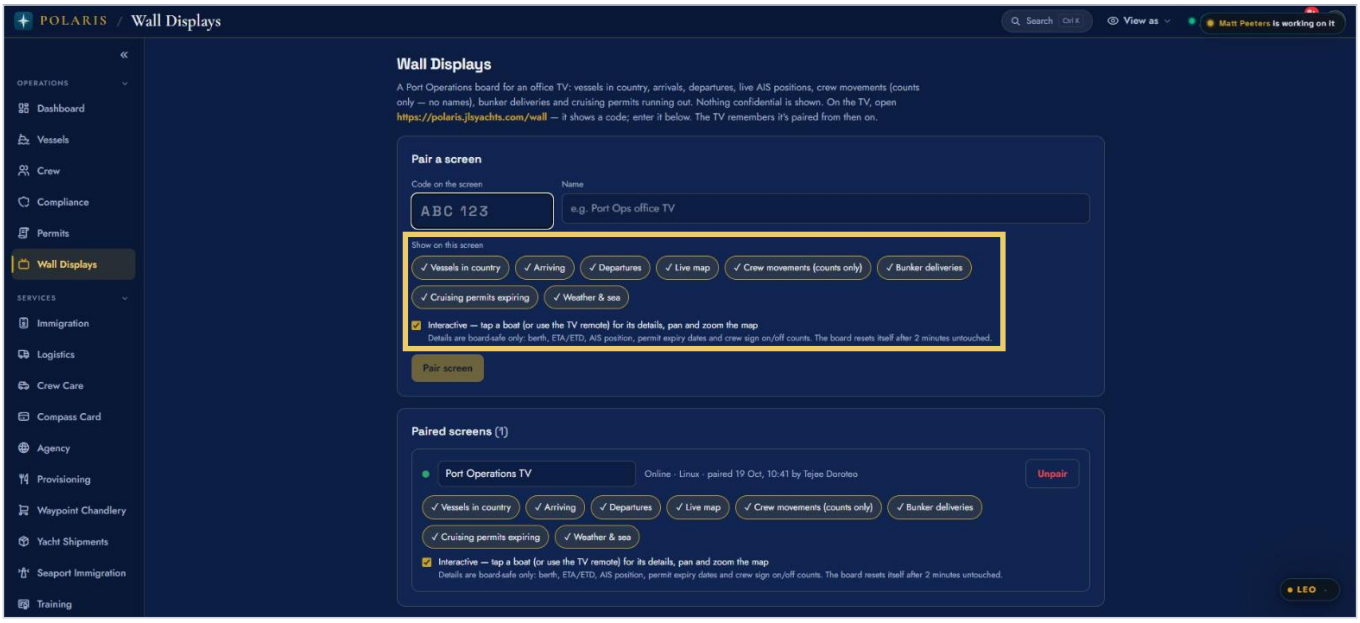

2 Enter the code and a name

In Polaris, open **Operations -> Wall Displays**. Under **Pair a screen**, type the **Code on the screen** and give the screen a **Name**, e.g. "Port Ops office TV".

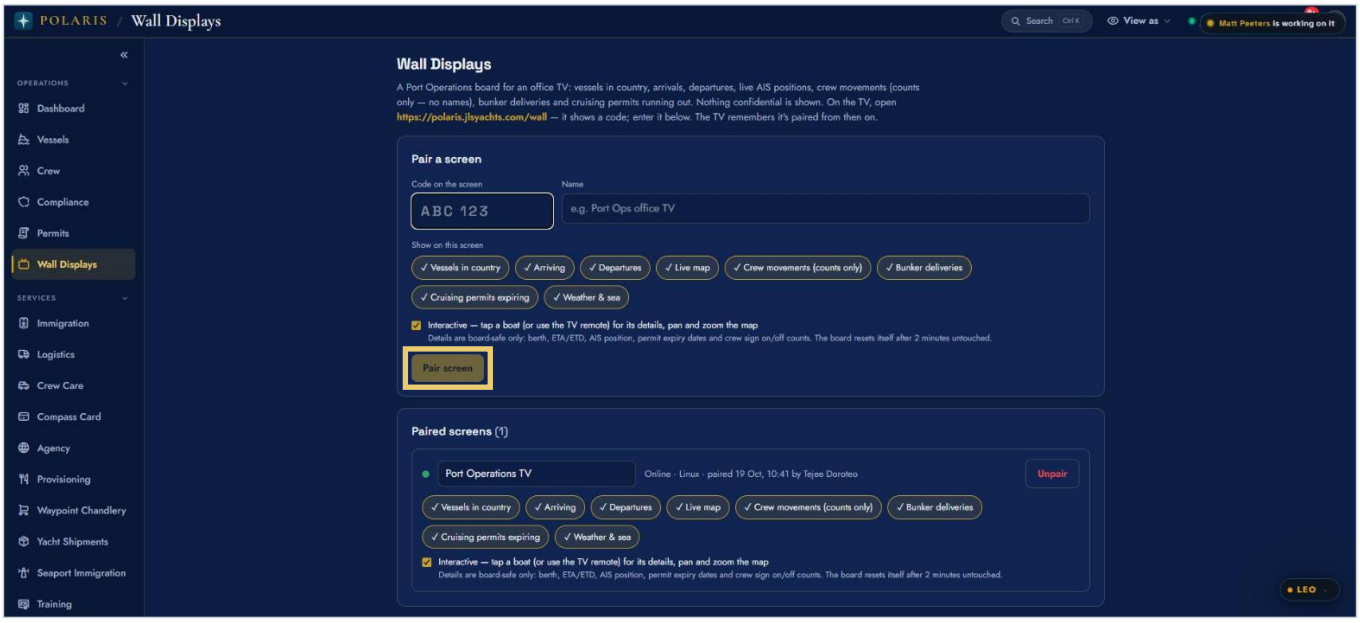

3 Choose what to show

Under **Show on this screen**, click panels on or off: Vessels in country, Arriving, Departures, Live map, Crew movements, Bunker deliveries, Cruising permits expiring and Weather & sea. Tick **Interactive** to let people tap a boat for its details — the board resets itself after 2 minutes untouched.

4 Pair it

Click **Pair screen**. Within a few seconds the TV switches to the live board, and it remembers it's paired from then on.

5 Change or unpair a screen

Paired screens lists every TV with whether it's online. Rename it, change its panels or the Interactive option, then click **Save**. **Unpair** sends the TV back to showing a pairing code.
