Raise and handle an IT ticket

5 steps · about 3 min

Log an IT issue in the Service Desk, reply to the requester and resolve it.

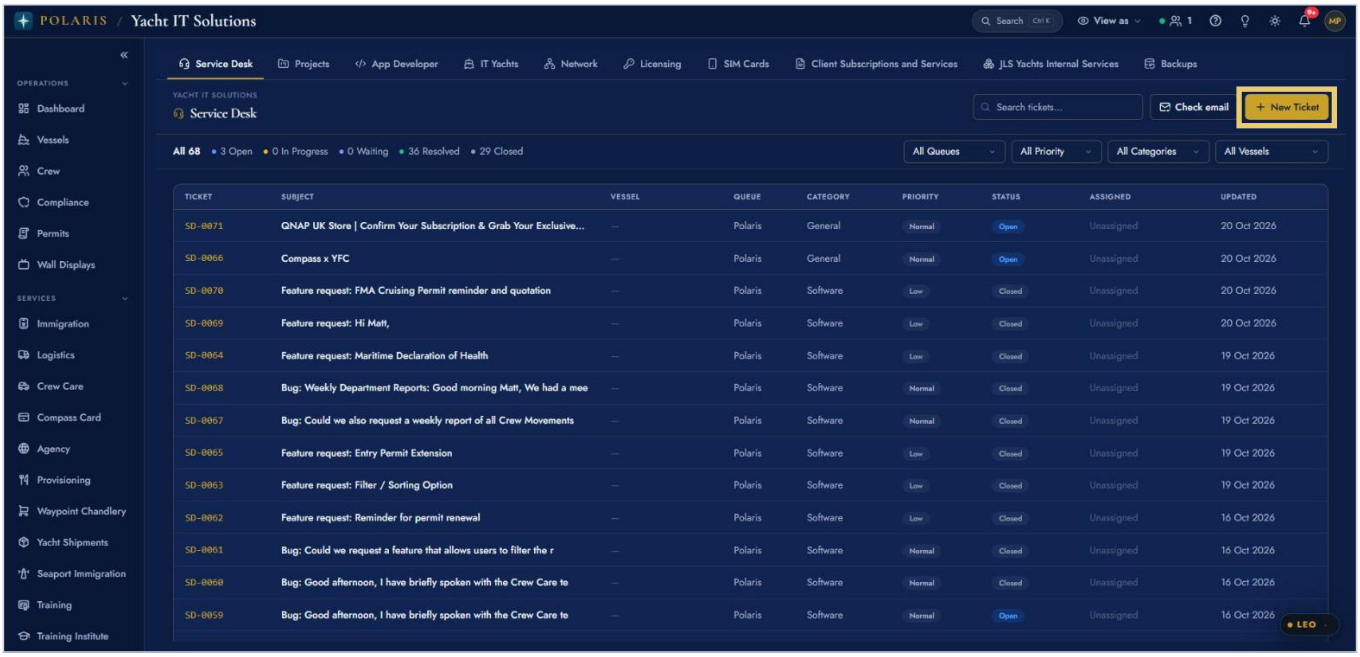

1 Open the Service Desk

Click **Yacht IT Solutions**. **Service Desk** lists every ticket. The strip counts **Open**, **In Progress**, **Waiting**, **Resolved** and **Closed** tickets, and the dropdowns filter by queue, priority, category and vessel.

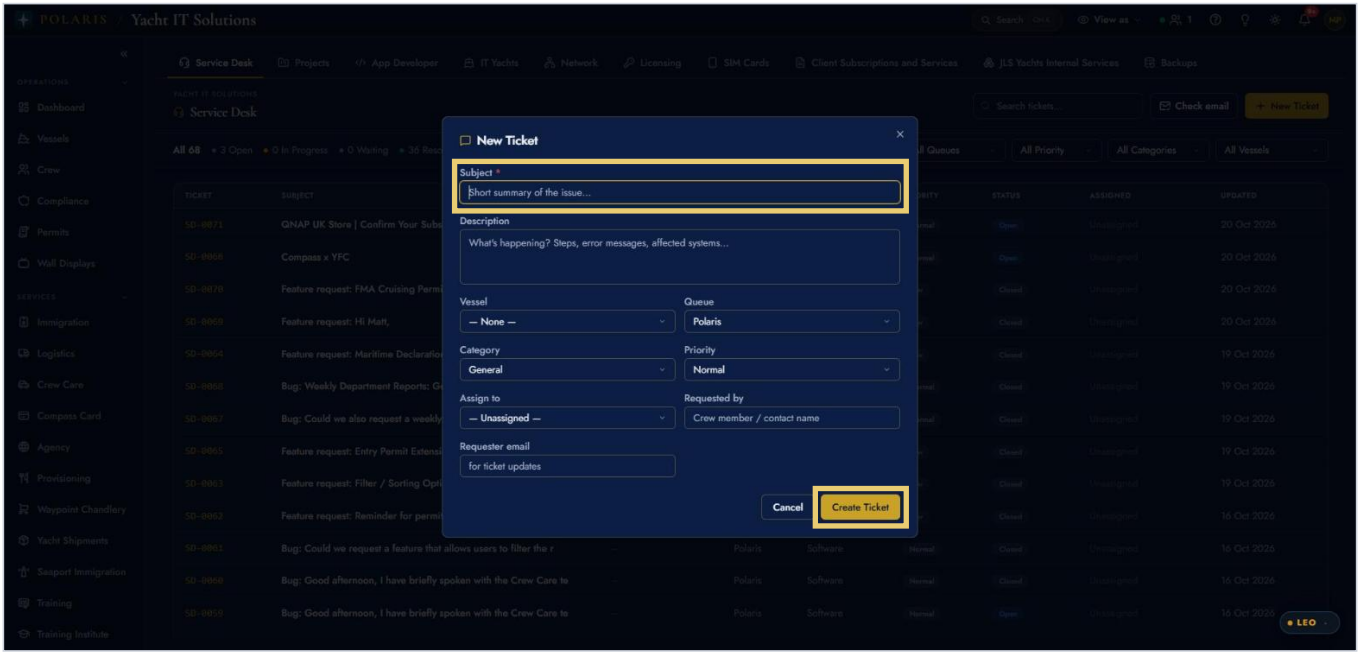

2 Click New Ticket

Click **New Ticket**. **Check email** pulls in any replies sent to the IT support mailbox.

3 Describe the issue

Enter a **Subject** (required) and a **Description**. Choose the **Vessel**, **Queue**, **Category** and **Priority**, assign it if you know who'll take it, and add who it's for and their email so they get updates. Click **Create Ticket** — the requester gets an acknowledgement email.

4 Work the ticket

Click a ticket to open it. Change **Status**, **Priority**, **Assigned to** and the other fields on the right — they save immediately. Write to the requester under **Reply** (**Send reply**), or keep a note for the team under **Internal note**.

5 Resolve it

Use **Send & complete** to send your last reply and mark the ticket **Resolved** in one go, or set Status to Resolved. The requester is emailed either way. Fill in **Resolution** and **Save details** for the record.
