Send a document for signature (Anchor)

5 steps · about 3 min

Upload a PDF, send it for e-signature and follow it until it's signed.

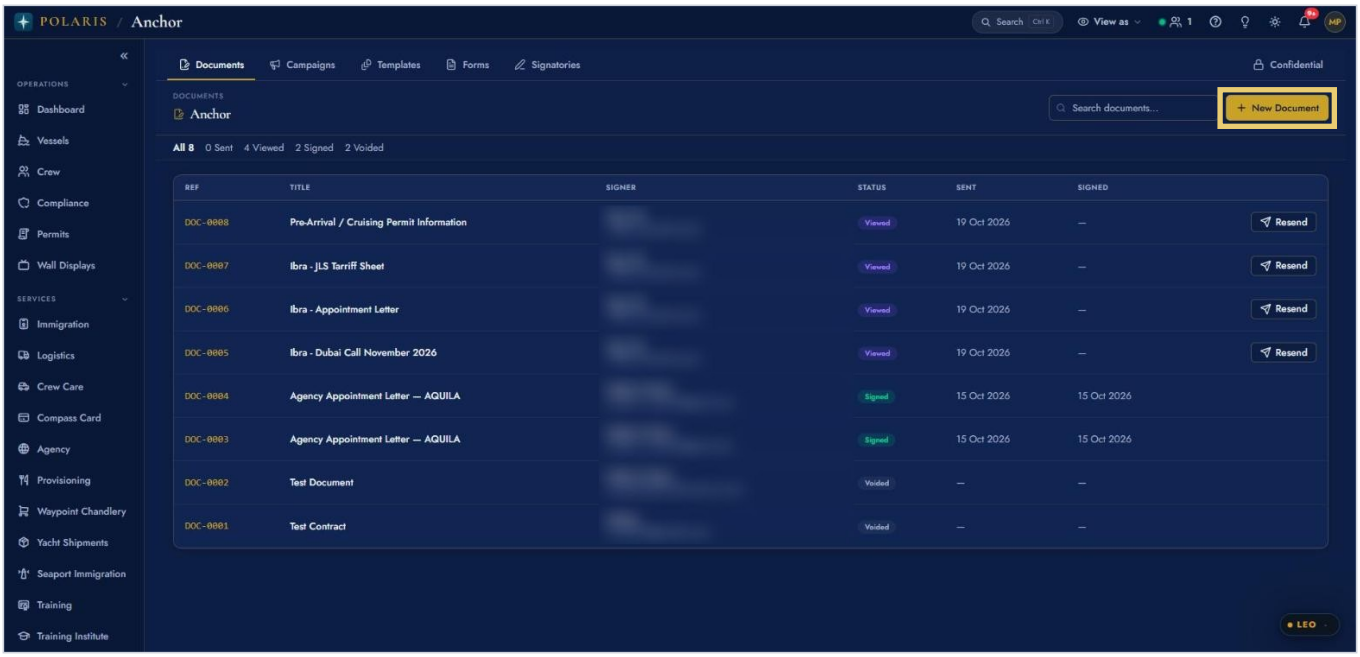

1 Open Anchor

Click **Anchor**. **Documents** lists everything sent for signature, with the signer, status, and sent and signed dates. The strip filters by **Sent**, **Viewed**, **Signed**, **Voided** and more.

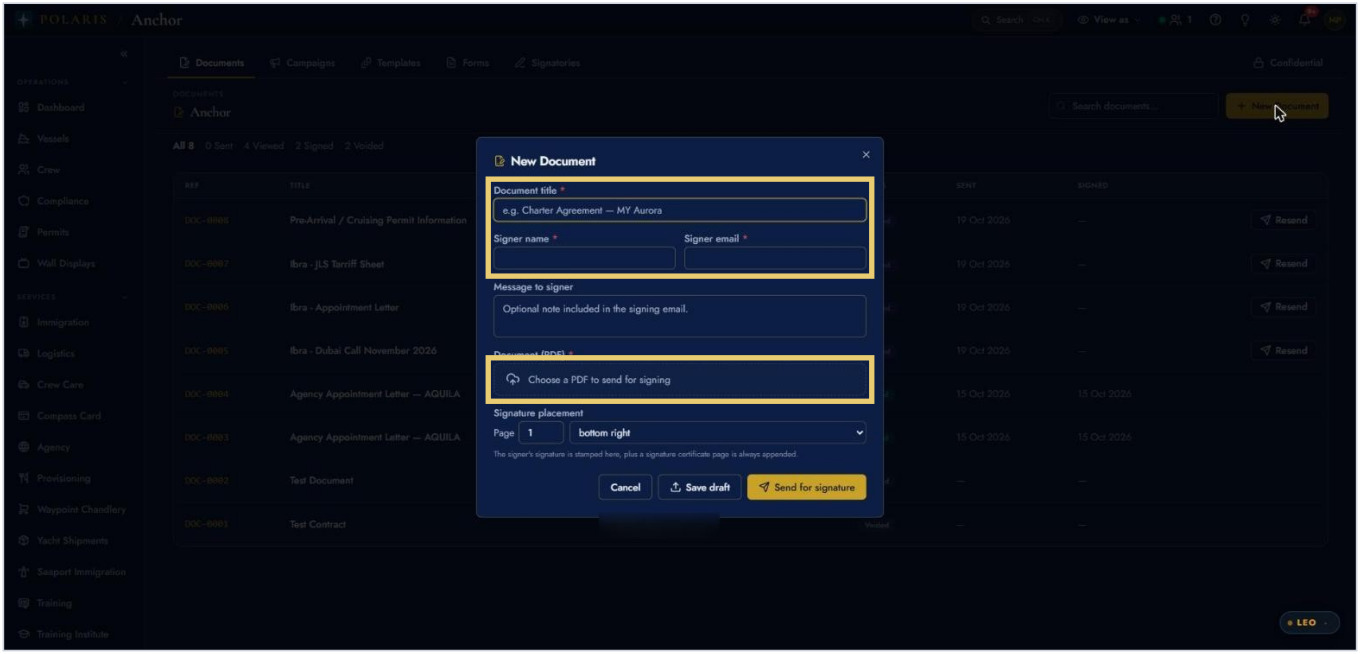

2 Click New Document

Click **New Document**. (To start from a ready-made document, use the **Templates** tab and click **Use** on a template instead.)

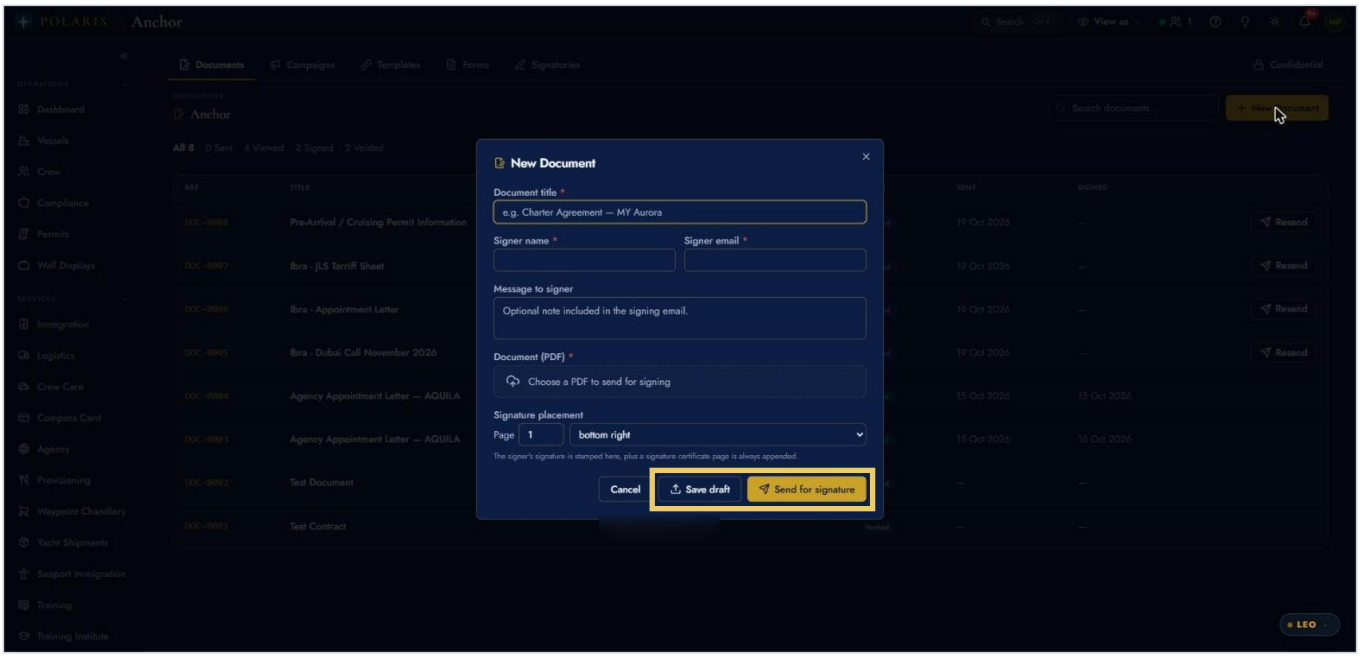

3 Fill in the details

Enter the **Document title**, **Signer name** and **Signer email** (all required), an optional message, and choose the **Document (PDF)**. Under **Signature placement** pick the page and corner where the signature goes.

4 Save as draft or send

Save draft keeps it without sending. **Send for signature** emails the signer a secure link straight away (if a company signatory has to approve first, it waits for them).

5 Track it

Click the document's Ref or title to see its **Audit trail** — sent, viewed and signed. From there you can **Copy link**, **Resend**, **Void** it, and download the original or signed PDF. **Resend** on the list emails the signer again.
